

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. PREFACE TO THE FIRST EDITION.

THE following Essay was originally written with the view of being published in the Cambridge Philological Museum, as a criticism of M. Raynouard's researches into the history and formation of the Romance Languages. The discontinuance of that journal having left me no alternative, but to suppress altogether what I had written, or to print it as a separate work, I resolved after some hesitation to adopt the latter I am fully conscious that much still remains to be done for the systematic exhaustion of the subject discussed in it: but as M. Raynouard's writings have now become scarce even in France; as they are rarely met with, and are little known in this country: as moreover a reference to many other books is re-

¹ The Cambridge Philological Museum was published during the years 1832 and 1833. The Author contributed to it some papers on classical subjects. It was edited by Archdeacon Hare and the present Bishop of St. David's, Dr. Thirlwall.

quired which can only be procured in foreign libraries; and as there is no extant work of authority which contains a general view of the history and grammatical structure of the Romance languages, I have thought that the results of my researches would be acceptable to some persons who might be desirous to obtain a connected view of the entire question, without consulting a variety of books and scattered essays, of very different degrees of accuracy and value, in which alone the desired information can now be found.

The problem, of which a tolerably complete solution is offered in the following pages, is one which cannot fail to interest all who have considered the intimate connexion of the development of languages, as well with the political history of the communities by which they are spoken, as with those refined processes of thought, of which language is at once the exponent and the evidence. In this point of view the origin and progress of the modern dialects of the Latin are marked by peculiarities, which give them a predominant title to attention. Having arisen within a purely historical period, they are free from the elements of uncertainty

which embarrass all enquiries into the origin of most other languages; while their descent from the language of the great Roman nation, and their actual diffusion over all the west of continental Europe, invests them with a deep interest in the eyes of all who take a connected view of the ancient and modern condition of these important communities.

On the other hand, the subject presents to the linguist and metaphysician a clear and full exemplification of the progress of a language in discarding its synthetic, and introducing analytic forms; of the progress by which, at the same time that its dictionary is enriched, its grammar is impoverished; that while its substance is improved, its form is deteriorated: a fact affording plentiful and interesting materials for reflexion, inasmuch as it offers the only certain instance in which the general course of civilisation does not tend to refine and improve all the instruments and appliances of the human intellect.

PREFACE TO THE SECOND EDITION.

This Essay was composed in 1833, and was published at Oxford, by Mr. Talboys, in 1835. Since its publication the elaborate work of Diez, on the Grammar of the Romance Languages, (Grammatik der Romanischen Sprachen, 3 vols. Bonn. First edition 1836—1844. Second edition 1856—60,) has appeared, followed by his Etymological Dictionary of the Romance Languages (Etymologisches Wörterbuch der Romanischen Sprachen, 8vo. Bonn. First edition, 1 vol. 1853. Second edition, 2 vols. 1861—2). The langue d'oil, or the French language, has likewise been subsequently illustrated by the copious grammar of Burguy, Grammaire de la Langue d'Oil; ou, Grammaire des Dialectes Français aux Douzième et Treizième Siècles, suivie d'un Glossaire. Berlin, 3 vols. 8vo, 1853, 1854, 1856.

These works have, to a great extent, superseded my Essay, and might seem to have rendered

¹ The references in the following Essay are made to the second edition of this book.

its republication superfluous. Having, however, been informed that its re-issue in a new edition would be acceptable to English students interested in the science of language, I consented to reprint it, for the following reasons:-My Essay had a special object; namely, the refutation of M. Raynouard's theory on the derivation of the Romance languages from the langue d'oc, or language of the Troubadours; and this object is consistently pursued throughout the entire enquiry. Now, the grammars of Diez, or Burguy, though they do not adopt this theory, nevertheless contain no detailed investigation of it, and they assume the truth of the opinions which my Essay endeavours to establish by The grammars in question, moreover, although they afford more copious illustrations of the Romance languages, and particularly of their syntax, than my Essay, consistently with its limited scope, pretends to furnish; yet do not present the theory of their derivation from the Latin in so compact a form. I may add that my Essay still remains the only English work in which this problem is treated at length, and in such a manner as to enable a student to form an independent judgment respecting its solution.

In revising this Essay for republication, at an interval of nearly thirty years since its composition, I have not attempted to make any material alterations either in its substance or in its form. With the exception of a few unimportant corrections, I have limited myself to the addition of such references to the works of Diez and others, published since the first edition, as seemed to me to be likely to be useful to a reader. These insertions in the notes are included within brackets.

The importance and interest of the philological problem, which is treated in the following pages, are much increased by the fact that it lies entirely within the historical period; and that not only the original and the derivative languages, but also the circumstances attending the transition, are known by authentic evidence, and by an unbroken tradition. It is therefore a problem which admits of solution by demonstrative arguments, and without a recourse to a series of hypotheses and conjectures, weakening as the chain lengthens.

CHAPTER I.

THE ORIGIN OF THE ROMANCE LANGUAGES.

§ 1. It is now nearly twenty years since M. Raynouard published at Paris two grammatical treatises on the Romance language, one containing an account of the rules of that language before the year 1000: the other, a complete grammar of the language of the Troubadours as preserved in their extant poems. These two grammars, accompanied with an introduction on the antiquity of the Romance language, and researches on its origin and formation, composed the first volume of the series which he has since continued under the name of Selections from the Poetry of the Troubadours. The poems, which form the four next volumes of his collection, were published by him from various manuscripts belonging to different public libraries of France and Italy, but especially from a manuscript in the king's library at Paris. Before the publication of this work, there was no printed collection of the poetry of the Troubadours in existence; and the few single poems contained in the treatise of the Abbé Millot and some other works of French and Italian writers, had for the most part been derived from inaccurate copies, and had been

imperfectly explained by the editors. As forming part of the same series, though not so closely connected as the preceding volumes, M. Raynouard afterwards put forth a comparative grammar of the modern Latin languages. considered in their relation to the language of the Troubadours. His entire undertaking will have been completed, when the dictionary of the Romance language. which he announced some years ago as being in a state of forwardness, shall have been laid before the public2. To those who are acquainted with M. Ravnouard's labours. it is unnecessary to speak in praise of publications of which the merits have been so generally and so justly admitted: to those who may not have met with them, it may be proper to say, that by his industry and original researches he has made known an European language and literature almost wholly forgotten since the extinction of the independence of Provence: and has thrown a greater light on the origin of the modern Latin lan-

In the introduction to vol. ii., consisting of pp. i.—xcii., M. Raynouard declares that he expounds the numerous affinities between the

¹ See an account of these works in Diez, *Poesie der Troubadours* (Zwickau, 1827), p. v.—ix.

² M. Raynouard died on the 27th of October, 1836, at the age of seventy-five, in the year following the original publication of this essay. His Lexique Roman; ou, Dictionnaire de la Langue des Troubadours, was published after his death, under the editorship of M. Paquet, in six vols. 8vo, the first of which bears the date of 1838, the second of 1836, the third of 1840, the fourth of 1842, the fifth of 1843, and the sixth of 1844. The first volume contains, 'Recherches Philologiques sur la Langue Romane,' p. ix.—xlii.; 'Résumé de la Grammaire Romane,' p. xliii.—lxxxviii.; and 'Nouveau Choix des Poésies originales des Troubadours,' 1—580. Vols. ii. to v. inclusive, contain the Lexique Roman, or Dictionary of the ancient Provençal language; the sixth volume contains a short Appendice to the Lexique, and a Vocabulaire Alphabétique des Mots disposés par Familles dans le Lexique Roman.

guages, their mutual relations, and their early structure and syntax, than perhaps all the other writers on these subjects collectively. In addition to the works here mentioned, his criticisms in the Journal des Savans form a complete history of the various publications of ancient French poems, and other writings connected with the philology of the Romance languages, called forth by that taste for the early native literature which his example and investigations have greatly contributed to create of late years in France. It is not indeed without reason that M. Raynouard's fame has spread itself through the learned public in Europe; that Schlegel has said that he has done more for the history of the French language than all the academicians of his country1; that by his means the study of the Troubadour poetry has taken root both in Germany and Italy, and that parts of his labours have been reproduced by writers of both those In England, however, as far as I am aware, countries. M. Raynouard's works have not attracted even among scholars and philologists the attention which they unquestionably deserve: and therefore I propose in the

six neolatin languages, namely,—1, the language of the Troubadours; 2, the Catalonian; 3, the Spanish; 4, the Portuguese; 5, the Italian; 6, the French. He proceeds thus:—

^{&#}x27;J'entreprends, pour la lexicographie des ces idiômes, ce que j'ai tâché d'exécuter pour la comparaison de leurs formes grammaticales.

^{&#}x27;J'ose espérer que le résultat de mes investigations démontrera évidemment l'origine commune des diverses langues de l'Europe latine, et ne laissera plus aucun doute sur l'existence ancienne d'un type primitif, c'est-à-dire d'une langue intermediaire, idiôme encores grossier sans doute, mais qui pourtant était dirigé par des principes rationnels, notamment quand il s'appropriait, sous des formes nouvelles, plusieurs des mots de la langue latine,' p. i. [Note added in 1862.]

¹ Kritische Schriften, vol. i., page 356.

present work to lay before the reader such an account of the principal parts of them as may enable him to form a judgment of the nature and value of their contents; though at the same time I shall sometimes take the liberty of departing from the order in which M. Raynouard has arranged his materials, and shall investigate some collateral questions relating to the origin of the Romance languages, on which he has not fully expressed his opinion.

In order to effect this purpose, I shall proceed to give an abstract of the principal contents of M. Raynouard's Grammar of the Troubadour language, inserting in their proper places the corresponding forms and idioms in the Italian, Spanish, and French languages, which are adduced in his Comparative Grammar1: so as to present in the most important points a tolerably complete parallelism of the Romance tongues. In this manner it will be made evident what relation the Provençal language, or the language of the Troubadours, bears to its cognate dialects of the Latin: and the reader will be enabled to judge of the truth of M. Raynouard's theory with respect to their origin, which I will now state as nearly as possible in his own words. He conceives that the Romance language, formed from the corruption of the Latin, was common to all the countries of Europe in which the Latin had been spoken, and is preserved in a pure form in the poetry of the Troubadours (Gr. R. p. 5,

¹ In this Grammar M. Raynouard constantly compares the forms of the Portuguese as well as of the Spanish language. For the sake of brevity and clearness I have omitted the Portuguese; as, although it deviates in many respects from the Spanish, nevertheless there is such a fundamental resemblance between them, that the same general arguments apply to both.

- 6.)1. It was a regular fixed language, having constant rules (Gr. Comp. p. ii.) and was universally understood over Roman Europe (Gr. Comp. p. xxix.) And this was the common source from which all the modern Latin languages were derived (Gr. Comp. p. ii.); so that all the characteristic marks and idioms of each of these languages are traceable in the mother tongue (ib. p. iv.), and the resemblance of the forms of certain words in these languages is sufficient to prove, not only a community of origin, but also the existence of a common intermediate type, which has modified both the Latin and other languages by operations of which the characteristic marks and the perfect unity may still be recognised (Gr. Comp. p. 30).
- § 2. Such is M. Raynouard's theory with respect to the origin of the Italian, Spanish, and French, and their dialects. He does not place them on the same line with the ancient Provençal or Langue d'oc, deriving them all, as sister languages, directly from the Latin: but he considers the Romance as an universal language, which arose from the corruption of the Latin in the middle ages, which was severally modified into the Italian, Spanish, Portuguese, modern Provençal, and French, and of which we have a faithful transcript in the poems of the Troubadours. In establishing this theory, M. Raynouard in some degree resembled the prophet mentioned in the Bible, who was required not only to interpret the dream, but also to divine what the

¹ In the following pages, the references are made to the separate edition of the *Grammaire de la Langue Romane*; but the miscellaneous treatises which belong to it are quoted as they are collected in the first vol. of the *Choix des Poésies des Troubadours*.

dream was: for before he could trace the relations of the modern Latin languages with the Romance, he had first to discover the Romance itself, to explain its structure. and to ascertain its grammatical rules1. When we consider the novelty of M. Raynouard's investigations, the multiplicity of unperceived relations which he brought to light, the extent of his erudition, his unwearied industry, and his scrupulous accuracy of citation, it is no wonder that his theory should have obtained general assent, as his works deserved general admiration, among persons occupied about the history of the Romance languages. Even before the publication of his Comparative Grammar, and when his theory had merely been put forward as an hypothesis, Perticari, in a treatise which has been much admired in Italy, adopted his views on the origin of the Italian: considering (to use his own words) 'that the Latin was the grandmother, while the Romance was the mother of the new

1 The same theory had indeed been previously advanced by others as a conjecture, but only as a conjecture. M. Raynouard's merit consists in assigning definite reasons for that which was before a mere guess. Smollett, the novelist, in his Travels in France and Italy, gives an account of the origin of the Romance and its relation to the other dialects of the Latin, which exactly agrees with M. Ravnouard's views, though I am not aware whence he borrowed it. 'The Patois, or native tongue of Nice (he says), is no other than the ancient Provençal, from which the Italian, Spanish, and French langnages have been formed. This is the language that rose upon the ruins of the Latin tongue, after the irruption of the Goths, Vandals, Huns, and Burgundians, by whom the Roman empire was destroyed. It was spoke all over Italy, Spain, and the southern part of France until the thirteenth century, whence the Italians began to polish it into the language which they now call their own. The Spaniards and French too improved it into their respective tongues. From its great affinity to the Latin, it was called Romance, a name which the Spaniards still give to their own language.' Letter xxi. vol. i.

languages now spoken over a large part of Europe1: which Romance (he says in another place) was the common language of Europe for more than five hundred The same theory has been adopted by Champollion-Figéac, by Sismondi in the later editions of his work on the Literature of Southern Europe, by Niccolini³, Lampredi, and Ugo Foscolo: and it is received by Balbi as the established opinion in his Ethnographic Atlas⁴. A few writers, such as Daunou, in the Journal des Savans⁵, Galvani, who has published an Italian work on the Troubadour poetry6, and a contributor to the Florence Antologia, have faintly expressed a dissenting opinion, or rejected some of the arguments by which the doctrine has been supported: Schlegel alone has expressed his entire dissent from this theory; and has stated succinctly in a short work published at Paris many years ago⁷, what appears to me to be the true explanation

p. 334. The mention of the Huns is probably an oversight, as they did not establish themselves in a part of Europe where, according to Smollett's view, the Romance language was ever spoken.

1 'Quindi possiamo dire che la latina veramente fu avola, ma la romana fu madre delle nuove favelle che ora si parlano in tanta parte d'Europa.' Scrittori del Trecento, lib. i. cap. 7; and see Difesa di Dante, cap. vii. ad fin. et 10.

6 Osservazioni sulle Poesie dei Trovatori, p. 515, note.

7 Observations sur la Langue et la Littérature Provençales, par A. W. de Schlegel. Paris, 1818. [The theory of M. Raynouard, as to the derivation of the Romance languages from a common type, in-

of the origin of the modern Latin languages, and some of the chief objections to which M. Raynouard's system is liable: but no one has undertaken to refute, or even to examine in detail, M. Raynouard's demonstrations, although it might have been expected that among a nation so jealous of the honour of their language and literature as the Italian, some critic would have arisen to question the truth of a theory which takes from that language the reputation which it has hitherto enjoyed of being the first-born of the ancient Latin. The objections which I shall propose to M. Raynouard's system do not, however, arise from any national feeling, or literary jealousy: the difficulties which I find in his argument presented themselves unsought; and it is only because no one better versed than myself in the literature of the middle ages has undertaken the task of examining his theory, that I shall in this work lay before the reader my grounds for venturing to reject an explanation supported with so much erudition and ingenuity.

There is perhaps no problem connected with language which admits of a completer solution than that which respects the modern European languages formed from the Latin¹. Unlike the origin of most languages, it lies within a purely historical period: the language of the

termediate between them and the Latin, is examined and rejected by Ampère, *Histoire de la Littérature Française au Moyen Age* (Paris, 1841), p. 23—33.]

1 'La langue Romane (says M. Raynouard) est peut-être la seule à la formation de laquelle il soit permis de remonter ainsi, pour decouvrir et expliquer le secret de son industrieux mécanisme: j'ai mis à cette recherche autant de patience que de franchise, et dans le cours de mes investigations grammaticales, j'ai eu souvent occasion de reconnâitre la vérité de l'axiôme, "non quia difficilia sunt, non audemus, sed quia non audemus, difficilia sunt,"' vol. i. p. 104. Among the other

native population, the changes which took place in their political condition, the race and languages of the invaders and of the other foreign nations with which they came in contact, all are certainly known: and although the early stages of these Latin dialects, when they were merely barbarous and unfixed jargons, formed by the intercourse of natives and strangers, spoken chiefly among illiterate persons, and used neither as the language of the government, of legal instruments, nor of books, are not only (with the exception of a few words) wholly unknown, but lost without hope of recovery; yet the events which accompanied and occasioned their origin are matter of historical record; and if we cannot always say with certainty to what precise cause the changes which the Latin underwent were owing, our information enables us at least to obtain negative results, and to exclude undoubtingly many hypotheses which might be tenable if we had merely the languages without a contemporary history of the times when they arose. The same is the case with the English language: without looking to its structure or examining the etymology of its words, we should be justified in rejecting an hypothesis which should derive it from an union of the Anglo-Saxon and the Greek, or the Anglo-Saxon and the Celtic; as we know that the invaders, who formed a new tongue by their intercourse with the native Anglo-Saxon population, spoke not Celtic, or Greek, but Norman-French. on the other hand we look at the Latin, we find by analyzing its forms and words, that it contains a Hellenic and a barbarous element, and is therefore probably a

European languages, however, the English, as well as the modern Greek, has been formed since the time of memory.

mixed language formed by the union of different races in one community¹: but what were the component parts of the nation (though the historical traditions afford materials for conjecture) is a matter of extreme uncertainty, and we may as well infer such a mixture of populations from the form of the language, as account for the form of the language by the mixture of the populations. It is therefore peculiarly important to explain, so far as the present state of our knowledge permits, the formation of the Romance languages: as they may furnish a sure point of comparison for other mixed languages whose origin lies before the dawn of history, and which can only be illustrated by means of their analogy with those of a more recent date.

§ 3. Before I proceed to examine M. Raynouard's account of the Provençal language, it will be proper to say something on a theory of the origin of the Italian, proposed by some native writers; since, if it could be established, it would apply with equal force to the other languages of the same family. The hypothesis to which

Lassen, in Welcker's Rheinisches Museum, vol. i. p. 361—4, objects to dividing the Latin into a Grecian and non-Grecian part, and says that it might as well be divided into an Indian and non-Indian, or a Teutonic and non-Teutonic part. It is however to be observed, that though all these languages are derived from a common source, yet there is a closer affinity between the Latin and the Greek, than between the Latin and the Sanscrit or the Gothic. Moreover, when Lassen says that the Latin bears no marks of being a mixed language, like the English and Persian, he forgets Otfried Müller's remark with respect to the Latin passive voice, and the progress which it has made towards analytic forms. The want of a power of forming compound words in Latin, which its cognate tongues possess in so remarkable a degree, (see Livy, xxvii. 11, 'Faciliore ad duplicanda verba Græco sermone,') seems likewise to prove that the mixture of a heterogeneous element had enfeebled the capacities of the original language.

I allude is that in ancient Rome, and in Italy, after the extension of the Roman dominion, there were two dialects or forms of the Latin language: one spoken by the upper classes, and educated persons, and used as the language of government, of the tribunals, of the laws, and of literature; while the other, universally spoken by the lower classes, and differing essentially in structure from the high Latin, was never written until the middle ages, when it became the general language of Italy, or (as it is now called) the Italian. This theory, first proposed by some writers of little note1, is illustrated at length by Maffei, in his history of Verona: the same view, in its unmitigated shape, is likewise followed by Lanzi, in his work on the Etruscan language²; by Bonamy, in the Memoirs of the Academy of Inscriptions; and has been more recently maintained by Ciampi, a Florentine writer. in a separate dissertation. A nearly similar account of the existence of a low Latin dialect is given by Muratori and Perticari, although both these writers admit the influence of the Teutonic invaders on the native language of Italy, which Maffei and Lanzi altogether exclude;

- ¹ See their names mentioned in Perticari, Scrittori del Trecento, c. 5.
- ² 'Non furono straniere lingue che in Italia lo (il latino) estinsero: fu un linguaggio di volgo, che fin da antichissimi tempi annidato in queste contrade, anzi in Roma stessa, e restatosi occulto nei miglior secoli, si riprodusse nei peggiori; e dilatandosi a poco e prendendo forza, degenerò in quella che anco per questa sua origine possiam chiamare volgar lingua d'Italia.' Lanzi, Saggio della Lingua Etrusca, vol. i. p. 331.
- ³ Vol. xxiv. p. 597—666. Bonamy's explanation embraces the Italian, Spanish, and French.
- ⁴ Ciampi, De Usu Linguæ Italicæ. Pisis, 1817, 4to. An excellent review of this book (which cannot now be procured even in Tuscany), and a refutation of the arguments on which it is founded, by M. Raynouard, may be seen in the Journal des Savans, 1818, p. 323—31.

Muratori in particular has laid great stress on the changes introduced by the conquerors of Italy, and has pointed out the German origin of a whole series of Italian words. It is not indeed very easy to ascertain the precise opinions of Muratori¹ and Perticari² on this subject; for, as they rest on a confusion of things which ought to be distinguished, the statements of their arguments naturally partake of the ambiguity on which the

1 Thus he says, Dissert. It. Med. Ævi, vol. ii. p. 1013, E., 14 A. 'Incompertum sane est, ne dicam falsum, eo præcipue tempore, quo Gothi et Langobardi in Italia dominati sunt, natam, atque ad culmen suum perductam fuisse vulgarem Italicam linguam, quam ad exprimendas cogitationes nostras nunc usurpamus.' But he adds, p. 1016 E. Itaque non immerito opinemur, præcipue sub Langobardorum regno Latinum sermonem, antea in barbariem multam prolapsum, gravius corruptum atque immutatum fuisse, ita ut faciem novæ linguæ lingua Italici populi tune præferre cæperit. Nam quod nonnulli sensisse videntur, eam ipsam Italicam linguam, qua nunc utimur, a Latina seu Romana adeo diversam, vel florente romani imperii fortuna, viguisse, somnium est nulla confutatione dignum.' And again, Diss. 33, p. 1101 C. 'Quum tamen longe plures semper abundarint in Italicis urbibus et agris incolæ Latini, propterea primas retinuit ubique Latinorum lingua, sed simul impedire nequiit quin ex tanta colluvione septentrionalium populorum potentius in dies corrumperetur et antiquas voces adulteraret, aut iis voces gentis dominatricis immisceret; præsertim quod officia fere omnia, et publica munera tum sacra tum profana Langobardis dominantibus conferrentur.'

² See Scrittori del Trecento, c. 5—7. In c. 6, speaking of the effects of the invasion of the barbarians, he says: 'Seguendo adunque la partizione dantesca, diremo essere presto mancato il latino illustre, ma il rustico essere in quei tempi rimaso.' In c. 7, he says that he 'has traced the history of the lingua rustica, discovered its ancient origin, showed how it prevailed for a long period of time, and afterwards under the name of Romance was polished in a better age.' In another place he says, 'non dalla barbarie Vandala nè dalla Gota, ma da questo volgar romano propriamente l'Italico fu prodotto.' Difesa di Dante, c. 7. Nevertheless he distinctly admits the influence of the Teutons, ib. c. 8: thus he says: 'non fu nè perduto nè rinnovato in quel devastamento Italico tutto il vecchio parlare.'

arguments themselves are founded. The confusion in question has (as M. Raynouard has remarked1) arisen from overlooking the distinction between style and structure, from inferring that because the lower classes of ancient Italy used ungrammatical and vulgar forms of expression, therefore they spoke a language which differed in its inflexions and syntax from that written in books and current among educated persons. Doubtless illiterate people in ancient Italy, as in all other countries, frequently committed grammatical errors2, and used low words in their conversation: doubtless the countrymen employed words which had been disused in the towns, and had become provincialisms: doubtless professions, as soldiers, lawyers, farmers, etc., had certain peculiar terms not generally current through the community. On the other hand there was a style of writing and speaking adopted by the upper classes, correct in grammar, admitting no mean and vulgar expressions, free from provincialisms, and the cant phrases of the camp, the country, or the forum; the standard of composition as established by critics and grammarians on the models of classical writers; the lingua aulica or cortigiana, as it was called by Dante, after the political institutions of his day, in opposition to the lingua plebea, the unpolished idiom of clowns. It was this pure and correct style which the grammarians of Rome taught to their scholars,

¹ Gr. Comp. p. xlvii.—viii. See also the criticism cited above in p. 11, ⁴.

Thus Quintilian, I. 6, 45, says: 'Quemadmodum vulgo imperiti loquuntur, tota sæpe theatra et omnem circi turbam exclamasse barbare scimus.' Hence in c. 6, § 27, he says: 'Non invenuste dici videtur aliud esse Latine aliud grammatice loqui,' that is, it is one thing to speak a language, another to speak it correctly.

and of which they treated in their works: like the Greek rhetoricians and elocutionists who taught their pupils to use a more elevated and grammatical diction, but not to speak in a different language from the vulgar. In Latin, . as in other languages, 'many things (as Maffei says1) had two names: one of which was used by educated persons and by writers, the other was current among the lower orders and in common use.' Thus in an elevated style a writer or speaker would use os, equus, fimus, pumilio, pulcher, ruber, percutere, ducere: but in familiar conversation, or in works sermoni propiora, the corresponding terms, bucca, caballus, lætamen, nanus, bellus, russus, batuere, menare, would be employed?. So Varro tells us that what the inhabitants of towns call quiritare. the country people called jubilare, that where the former said pellicula, the latter said scortum3. Pliny calls conterraneus a castrense verbum, Gellius says the same of copior4; and we know that Livy was reproached with his Patavinity. But when Maffei would infer from such facts as these that there was a dialect spoken by the lower orders of ancient Italy, resembling the modern Italian rather than the Latin⁵, his reasoning has just as little weight as his proofs of the use of articles and

¹ 'Di molte cose v'eran due vocaboli; un dei quali si adoprava dalla gente colta e dagli scrittori, l'altro era proprio della plebe ed usuale.'

Verona Illustrata, part I. col. 313. [For a list of plebeian Latin words, see Diez, Rom. Gramm., vol. i. p. 7—28.]

² These instances are given by Maffei.

³ De L. L. vi. 68, vii. 84, ed. Müller.

⁴ Plin. Præf. ad Nat. Hist., § 1. Gellius, xvii. 2.

⁵ See his entire argument, col. 312—20. Maffei's conclusion is rejected as absurd by Tiraboschi, Storia della Litteratura Italiana, Preface to tom. iii. part I.; by Pignotti, Storia di Toscana, vol. ii.: Dell' Origine e Progressi della Lingua Italiana; by Diez Poesie der Trouba-

auxiliary verbs in ancient Italy¹. There is no doubt that Latin writers sometimes prefix the pronoun ille to a noun, much in the same way that the Italian uses its definite article, there is no doubt that they sometimes used habeo and a past participle, after the manner of the modern conjugation with avere; but these are anomalous instances, not rules; they are only the rudiments and germs of a system which had not then come into being; and notwithstanding these idioms the Latin had no articles. and no active conjugation with auxiliary verbs. The very examples cited by Maffei make against him: for we find that the purest and most elegant writers of Latin did not avoid his plebeian words, and that they used them moreover with the Latin terminations and inflexions. Instead therefore of producing an exclusively plebeian word with an Italian termination, he quotes from Lucretius. Horace, and Juvenal such words as russus, bellus, and caballus with a purely Latin form. There can be little doubt that the state of the Latin language in ancient Italy exactly resembled that of the English in most parts of England, and that of the French in Paris and its neighbourhood: viz..—that the language spoken by the whole population was the same in its structure and form, but that the upper and educated classes spoke it without solecisms, and coarse or vulgar expressions, while the lower orders and the country people used an ungrammatical, homely, and sometimes anti-

dours, p. 288; and by other writers. See also Hallam's *Middle Ages*, ch. 9, part I. vol. iii. p. 320.

¹ Ib. col. 318, 319. By the same mode of reasoning it might be shown that the Greek, which sometimes said καλύψας ἔχω, βεβουλευκώς ἔχω, used auxiliary verbs. See Matthiæ's Gr. Gr., § 559.

quated mode of diction. It would be easy to make in English a list of passages from writers on style who give cautions against the use of plebeian expressions: and to collect a series of double synonyms, of which one is suited to a serious, poetical, and lofty, the other to a ludicrous, familiar, or humble style. This, according to Maffei's way of reasoning, would be a proof of the existence of two languages in England, one spoken by the upper, the other by the lower classes. The orthography of the Latin, as of all other languages before the use of printing, was completely unfixed, and from the practice which prevailed in ancient, as it prevails in modern Italy, of representing the exact sounds of the voice with letters, (instead, like English and French, of often making a word an arbitrary symbol to represent a sound,) many peculiarities of local pronunciation were introduced by the stone-cutters into public and private monuments: but there is no trace of the existence in ancient Italy of a language spoken among the lower orders, differing from the Latin in its grammatical structure, of a patois or dialetto1, standing to the Latin in the same relation as the Provençal or Gascon to the French, as the Catalonian to the Spanish, as the Genoese, Mantuan, or Bolognese, to

¹ We have no word in English to express the idea signified by these words, of an unwritten language spoken by the inferior classes, differing in structure or in origin from the national or common language. The Welsh, the Gaelic, and the Irish, as spoken in Wales, Scotland, and Ireland, are indeed properly patots like the Bas-breton: but the provincial languages of Norfolk, Somersetshire, Yorkshire, and Scotland, cannot in strictness be so called, as they have the same inflexions as the written English, though they contain many peculiar words not generally understood. A Norfolk or Yorkshire peasant would understand a play of Shakspeare, or a speech made in pure English, but a Provençal learns French as he would learn Spanish, and there are translations of

the Italian: which are languages with different inflexions and syntax, and the one is not intelligible to a person acquainted with the other, although both belong to the same stock. But the language popularly spoken in Tuscany has the same inflexions and grammar as the pure Italian, the κοινὴ διαλεκτὸς of Italy, though it may contain many words peculiar to itself¹; and such, I conceive, was the relation which the plebeian language of Rome bore to the style in which Cicero addressed the senate, or composed a philosophical treatise. It was only a less perfect, refined, and correct form of the self-same Latin language. Without further discussion, therefore, we may reject, as wholly destitute of evidence, the theory of Maffei, which finds the Italian, and of Perticari², which

Tasso into Venetian, Milanese, Bolognese, and other Italian dialects. The definition of dialetto in the Vocab. della Crusca, viz.,—'Spezie particolare di pronunzia di alcun linguaggio,' is very imperfect. The Dictionnaire de l'Academie defines patois to be 'langage du peuple et des paysans particulier à chaque province.' Baretti, in his Italian and English Dictionary, explains dialetto to be 'a manner of speech peculiar to some part of a country, yet all using the same radical language.' The latter limitation is probably true of the word dialetto, as used in Italian: but it does not appear to apply to the French term patois: for the Basque in Navarre, or the Bas-breton in Britany, would, I conceive, be properly termed patois, though they belong to a different stock from the French and Spanish.

- ¹ See the Lamento di Cecco di Varlungo, a pastoral poem in the language of the Tuscan peasants. Some remarks on the much controverted point of the relation of the Tuscan to the written Italian, and the other Italian dialects, will be found in note (A.) at the end.
- ² The following statements of Balbi, in his Atlas Ethnographique, agree nearly with Perticari's theory; tab. xii., par. 161. 'Latine. C'était la langue écrite et commune au beau monde de l'Italie et de tout le vaste empire romain; elle était très différente de la lingua plebeia ou rustica, parlée dans les campagnes de la péninsule, et par les personnes des classes inférieures dans les Espagnes, les Gaules, et autres provinces.' Ib. 162: 'Romane ou Romana rustica parlée dans

finds the Provençal, in the dialect of the lowest classes of ancient Italy¹.

§ 4. The extension of the Latin language over the countries of Western Europe occupied by the Romans, is a fact more easily proved² than accounted for. As the native tribes of Italy, Gaul, and Spain, yielded successively to the Roman arms, so their multifarious dialects gave way before the language of their conquerors. In many instances the language of conquering nations has disappeared, or left only faint traces of its existence in the native dialect of the country. Thus the Normans adopted the language of their subjects and neighbours in Northern France³; and the English tongue, though com-

les beaux temps de Rome par les basses classes de la société dans tout le midi de l'Europe romaine; la Grèce et quelques autres pays exceptés. Après avoir subi des modifications plus ou moins considérables, la romane paraît encore subsister dans les dialectes vulgaires qu'on parle dans une grande partie de l'Espagne, de la France, de la Suisse, et dans quelques cantons de l'Italie.' For a similar view of this subject in a more recent work on the modern European languages see note (B.) at the end.

- On an assertion of Niebuhr's, with respect to the mention of a lingua volgare subordinate to the Latin, by Priscus, in relation to an embassy which took place in 448, A.D., see note (C.) at the end.
- ² See Raynouard, vol. i., p. 1—6. 'Exploratum est (says Muratori) per universam Italiam, Galliam, et Hispaniam propagatum ita fuisse Latinæ linguæ usum, ut non docti tantum viri, sed et plebes et rustici denique omnes eamdem usurparint.' Antiq. It. Med. Ævi, Diss. 32, vol. ii., p. 1014 A. On the universality of the Latin language in Gaul, see Histoire Littéraire de la France, vol. vii., avertissement, § 1. The universal prevalence of the Latin language is proved by the use of the word Latin for language generally, in old French and Italian: see Orell, Alt-französ. Grammatik, p. 28. Vocab. della Crusca in v. On the universality of the Latin language in Spain, see Mayans i Siscar, Origenes de la Lengua Española, vol. ii., p. 20.
- 3 On this change of language see Gibbon, c. 56, note 17. Gley, Langue et Littérature des Anciens Francs, p. 275. Raynouard, Obser.

pletely subverted by their influence, nevertheless retains in substance its original Saxon character. But the Latin, having at the same time the advantages accruing from the influence of government, which imposed on the governed the necessity of understanding it¹, seems like the Greek, to have propagated itself by a sort of magical power among the inhabitants of Western Europe². In Italy the Etruscan disappeared before it under the early emperors, and every trace of that singular language has been lost except the inexplicable inscriptions: the Oscan and other dialects of the native Italian tribes underwent the same fate³: the Celtic was forgotten in Gaul and Spain, and was only preserved among the inhabitants of

vations sur le Roman de Rou, p. 16—21. Heeren, Ueber den Einfluss der Normannen auf die Französische Sprache und Litteratur, Werke, vol. ii., p. 367—9.

- ¹ The Romans used their own language in all acts of the government even in Greece (see Raynouard, vol. i., p. 2, 4), and did not, like the Austrians and the French in Italy, employ the language of the conquered nation. The Latin however did not supplant the Greek either in Greece or in Magna Græcia; and in the former country it was not constantly used as the language of government, as we know from the many extant Greek inscriptions relating to public matters which belong to the time of the Empire: but it was introduced by the influence of government into Asia Minor, Syria, and Constantinople: see the Quarterly Review, vol. xxiii., p. 142.
- 2 'The facility with which they were thus moulded into Greeks is a characteristic of the Pelasgian tribes, and a main cause of the dissolution and extinction of the nation. It is natural to view it as resulting from the affinity between the two races, which yet were not on that account the less essentially different: and such I believe to have been the case; yet we may observe a magical power exercised by the Greek language and national character over foreign races that came in contact with them, even where no such affinity can be conceived.' Niebuhr, Hist. of Rome, vol. i., p. 50.
- ³ On the extension of the Latin in Italy, see Lanzi, Saggio della Lingua Etrusca, vol. i., p. 27.

Armorica¹: the Iberian gave way in Spain, and only lived in the modern Basque among the mountaineers of the Pyrenees: the Ligurian became extinct on the shores of the Mediterranean. The use of the Latin language gradually became as universal over Western Europe, as the dominion of the Roman laws and political institutions. As this language had been spread by conquest, so it was destined to be destroyed by conquest; and when the Teutonic races of the Herulians, Goths, Lombards,

1 On the diffusion of the Latin language in Gaul, see Bonamy, Memoires de l'Acad. des Inscriptions, vol. xxiv., p. 587-94. The Celtic however still lingered in some of the Eastern and Southern parts in the third and fourth centuries. Alex, von Humboldt has the following remarks on this subject: 'I believe (he says) that we must look into the character of the natives and the state of their civilization. and not into the structure of their language, for the reason of this rapid introduction of Latin among the Gauls. The Celtic nations with brown hair, were certainly different from the race of the Germanic nations with light hair, [see Niebuhr, vol. ii., n. 1169:] and though the Druid caste recals to our minds one of the institutions of the Ganges, this does not demonstrate that the idiom of the Celtic belongs, like that of the nations of Odin, to a branch of the Indo-Pelasgic languages. [This affinity has now been proved by Dr. Prichard.] From analogy of structure and of roots, the Latin ought to have penetrated more easily on the other side of the Danube, than into Gaul; but an uncultivated state, joined to great moral inflexibility, opposed probably its introduction among the Germanic nations.' Personal Narrative. vol. vi., p. 249, note. Although it may be true that the Celtic is inferior in natural capacity to the Teutonic race, yet the reason why the Latin made no way in Germany, is, that the Germans were not subjugated and their country occupied by the Romans. It is certainly difficult to explain how the Romans should have completely eradicated the Celtic language from a large part of Gaul, while the same causes which appear at that time to have produced so great an effect, have during the last eight or nine centuries produced so little effect, among the Celts of Britany, Wales, Scotland, and Ireland. In Cornwall alone the Celtic language has become extinct, and that within less than a century.

Burgundians and Franks, successively overran the West of Europe in the fifth and sixth centuries, and established themselves in it as rulers by the power of the sword, it was to be expected that the language of the conquered people would undergo great changes; such as in England and Scotland were produced by the invasion of the Normans, and in Greece by the irruption of the Sclavonic tribes. If the relative numbers of the invaders and the native population had been reversed, if the Teutonic armies had formed a large majority, instead of a small minority of the entire nation, the Latin would probably have become extinct; as the Celtic in England disappeared before the Saxons and Angles, who not only vanquished but exterminated the ancient Britons. As it was, the numbers of the natives were too large to allow of the extinction of their language¹; while the conquerors would naturally be as little willing to yield the use of their native tongue, as to surrender any other of the privileges of conquest. But as it was necessary that the two parties should communicate with each other, the one in order to give, the other in order to receive commands; the less numerous party abated something of their privileges, and

Tunc (says Muratori, speaking of the Lombard invasion of Italy) immanis turba promiscui sexus, Germanicam linguam a teneris unguiculis edocta, in Italiam effusa est, et provinciis fere universis dominari cepit. Didicere illi quidem debellatæ gentis linguam, utpote dulciorem, et nimis altis radicibus stabilitam; nam ut ut exhausta habitatoribus tunc Italia fuerit, longe tamen major Italicorum superstitum quam Langobardorum novorum hospitum numerus fuit. Didicerunt, inquam, sed ita ut nova ipsi quoque vocabula in sermonem Italicum intulerint, et ad immutandam gravius quam antea pronuntiationem et desinentiam Latinarum vocum, inscitia potissimum ubique grassante, operam suam et ipsi contulerint. Antiq. It. Med. Ævi, vol. ii., p. 1014 A. And on the numbers of the German invaders of Italy, see ibid., p. 1100 A—p. 1103 B.

submitted to attempt to explain themselves in the language of their subjects. Being, however, more versed in war than in letters, they used a form of speech which instead of faithfully imitating the Latin only approximated to it¹, and by introducing the use of articles and auxiliary verbs, by destroying the inflexions of cases which was too complex a system to be easily learnt, and by infusing a number of Teutonic words, they formed a hybrid lan-

¹ The following account of this change is given by Sismondi. 'Ignorant les uns et les autres tout principe de grammaire générale. ils ne songeaient point à étudier la langue de leurs ennemis : ils s'accoutumaient seulement à entendre réciproquement le jargon dans lequel ils cherchaient à se rencontrer. Ainsi nous voyons encore aujourd'hui des gens du peuple transportés dans un pays étranger, se faire avec ceux dont ils ont besoin, un patois de convention qui n'est le leur, ni celui de leurs hôtes, mais que tous deux comprennent, et qui empêche tous deux d'arriver, à la langue de l'un ou de l'autre-Ainsi dans le bagnes de l'Afrique et de Constantinople des esclaves Chrétiens de toutes les parties de l'Europe mêlés avec les Maures. n'ont point enseigné à ceux-ci leur langage, et n'ont point appris celui des Maures; mais ils se rencontrent avec eux dans un jargon barbare qu'on nomme langue franque; il est composé des mots romans les plus nécéssaires à la vie commune dépouillés des terminaisons qui marquent les temps et les cas, et unis ensemble sans syntaxe. Ainsi dans des colonies d'Amérique, les planteurs s'entendaient avec les nègres dans la langue Créole, qui est de même le Français mis à la portée d'un peuple barbare, en le depouillant de tout ce qui donne de la précision, de la force, ou de la souplesse.' Littérature du Midi, vol. i. p. 19. and compare p. 33. 'The Moravians have translated the Bible and a book of hymns into the Talkee-talkee, or negro language. of which they have also composed a grammar. It is curious that this patois of the blacks, though it includes many African words, should have for its basis the English language, pared of inflexions, and softened by a multitude of vowel terminations.' Bolingbroke, Voyage to Demerary, cited in the Quarterly Review, vol. xliii. p. 553, where specimens are given of a similar negro corruption of the Dutch language. in which the inflexions are also obscured. On the change of the Latin into the Romance language of France, see also Histoire Littéraire de la France, vol. vii. avertissement p. 28. And compare Brere.

guage, generated from the corruption of the Latin, and differing essentially from its parent, though still retaining a strong resemblance to it¹.

It is likewise to be remembered that in contending with the language of the Teutonic invaders, the Latin enjoyed the advantage which is derived from the possession of a classical literature and a high cultivation, both of grammatical form and rhetorical style; an advantage which was wanting to the German language, when the Goths, Lombards, Vandals, Franks and Burgundians overran the Western Empire. The maintenance of the Roman law in its original form, and of the constitution and worship of the Roman church also tended to uphold the Latin language, and to preserve it from oblivion. If these circumstances had been reversed, if the Germans with a cultivated language and literature, and a code of laws already written in their native tongue, had overrun a less civilized people, (which was the case with the Latin, when brought in collision with the Celtic, Iberian, Etruscan, etc.) the probability is, that not even the large numbers of the native Roman population would have saved their language from almost total destruction².

From what has been said, it follows, that the change

wood's Enquiries touching the Diversity of Languages, c. 5. Wachsmuth's Europäische Sittengeschichte, vol. i. p. 254.

¹ The following conceit of an Italian writer cited by Galvani, Osservazioni sulle Poesie dei Trovatori, p. 20, correctly expresses the origin of the modern languages. 'La lingua latina . . . della gravidezza dei linguaggi barbari partori la nostra volgare, e ne morì a mezzo il parto.'

² On the difficulty of eradicating a language, particularly a cultivated language, with a literature, see Heeren's Essay Ueber die Mittel zur Erhaltung der Nationalität besiegter Völker: Historische Werke, vol. ii. p. 17 sqq.

undergone by the Latin, in consequence of the Teutonia invasion, was three-fold: viz.—a change of structure, affecting the terminations and inflexions of nouns, participles, and pronouns, and the conjugations of verbs: a change of syntax, including the introduction of new idioms; and the introduction of numerous foreign terms, relating in great part to military and political subjects. On the two first of these changes, which alone concern the grammar of the Romance tongues, I shall hope to be able to give a satisfactory account in the course of the present work: the latter, which is a question of etymological research, scarcely admits of being treated in a connected form, though a discussion of it might lead to highly interesting

1 'In comparing (says Gibbon, speaking of the Lombard kingdom in Italy) the proportion of the victorious and vanquished people, the change of language will afford the most probable inference. According to this standard it will appear that the Lombards of Italy, and the Visigoths of Spain, were less numerous than the Franks or Burgundians; and the conquerors of Gaul must yield in their turn to the multitude of Saxons and Angles, who almost eradicated the idioms of Britain. The modern Italian has been insensibly formed by the mixture of nations; the awkwardness of the barbarians in the nice management of declensions and conjugations reduced them to the use of articles and auxiliary verbs, and many new ideas have been expressed by Teutonic appellations. Yet the principal stock of technical and familiar words is found to be of Latin derivation.' Decline and Fall, c. 45. This passage appears to me to contain a just view of the origin of the Italian: but although the French has departed further than the Italian or Spanish from the Latin, I am not aware that it contains a greater number of Teutonic words. Moreover, the confusion and loss of cases gave rise not to the use of articles, but to that of prepositions, to express the relation previously signified by the inflexion. Savigny, Geschichte des Römischen Rechts im Mittelalter. vol. i. c. 3, p. 181-2, infers from the difference of the legal relations, that in Northern France the Franks settled in large numbers, and expelled the chief part of the natives, while in Southern France their number was smaller, and most of the Romans were spared.

results, as regards the history both of nations and languages¹.

By this change the Latin language of Western Europe passed from the synthetic to the analytic class: that is to say, instead of declining nouns and conjugating verbs by the inflexion of their terminations, it resolved the ideas into their component parts, and expressed them by means of prepositions and of participles with auxiliary verbs: as will be explained in detail when we come to examine those parts of speech. It has been supposed by some writers that this grammatical system was transferred from the Teutonic to the Latin language; and that the Germans, accustomed to analytical forms in their own tongue, copied them faithfully in the jargon which they produced by literally translating German thoughts into Latin words. But this hypothesis, though it affords an easy solution of the problem, is not entirely consistent with fact. The ancient German or Gothic was undoubtedly a synthetic language, like the Greek; and at the time when the Teutonic tribes settled over the Western Empire, it had as yet made but little progress to the adoption of analytic forms. It still used the inflexion of cases; it had no indefinite article, and of the definite article it made little use; nor does it exhibit more than the rudiments of conjugation by auxiliary verbs?. Consequently, although there appear to be some few instances (which will be pointed out hereafter) of German idioms having been adopted into Romance languages, yet we must seek some other explanation of the new character assumed by the Latin at the time of the German con-

¹ See note (D.) at the end.

² Schlegel, Observations, p. 19, 21, 34, 87.

quest. This explanation is doubtless to be found in the remark of Schlegel, that 'when synthetic languages have at an early period been fixed by books which served as models, and by a regular instruction, they retained their form unchanged: but when they have been abandoned to themselves, and exposed to the fluctuations of all human affairs, they have shown a natural tendency to become analytic, even without having been modified by the mixture of any foreign language¹.' He illustrates this position by the history of the German language, 'which, not having been fixed by any artificial means till the beginning of the sixteenth century, had full liberty to follow its natural course; and the progress which it made during that time towards analytical forms, by losing part of its synthetical forms, is immense².' cannot be doubted that the natural tendency of language is to substitute analytical for synthetical forms: but this principle being admitted, there are two ways of accounting for the predominance of the latter in the Romance languages. One is that adopted by Diez, who, without going to the same length as Maffei, thinks that the familiar language of the people had adopted a number of analytical forms, and that the German influence only increased and hastened the disposition to change which already existed in the popular Latin. And he cites as a parallel instance the modern German; which, as the language of the educated classes, retains the use of cases; while in the mouths of the lower orders the cases are supplanted, as in Dutch, by a preposition or pronoun³. But although there might be strong reason, on the

¹ Schlegel, Observations, p. 18. ² Ibid. p. 19.

³ Poesie der Troubadours, p. 286-90.

ground of analogy, for accepting this explanation, still there is no historical evidence in its favour: on the contrary, we know that not only compositions meant for general perusal, but that private letters, such as those of Cassiodorus, were, either at or immediately after the settlement of the Goths in Italy, written in a Latin, which, however impure or inelegant, retains its synthetic character as strongly as that of Ennius or Lucretius. Notwithstanding the powerful tendency which may exist to break down synthetic forms, it may perhaps be conjectured with some reason, that as the Latin had a fixed classical standard, it would have retained its grammatical character unchanged in Italy, Spain, and France, as it has in the mouths of the people in some parts of Hungary, if the German invasion had never taken place. The explanation of Schlegel, that the change produced in the Latin was purely the effect of the German conquest¹, seems therefore preferable. The conquerors, not understanding the complicated and refined system of in-

¹ Les conquérans barbares (ils adoptèrent eux-mêmes ce nom qu'ils croyoient honorable, puisqu'il significit l'opposé de romain) trouvant dans les pays conquis une population toute latine, ou, selon l'expression du temps, romaine, furent en effet forcés d'apprendre aussi le latin pour se faire entendre, mais ils le parloient en général fort incorrectement; surtout ils ne savoient pas manier ces inflexions savantes, sur lesquelles repose toute la construction latine. Les Romains, c'est-à-dire les habitans des provinces, à force d'entendre mal parler leur langue, en oublièrent à leur tour les régles, et imitèrent le jargon de leurs nouveaux maîtres. Les désinences variables étant employées arbitrairement, ne servoient plus qu' à embrouiller les phrases : on finit donc par les supprimer et par tronquer les mots. Voilà ce qui distingue les dialectes romans, dès leur origine, de la latinité même la plus herissée de barbarismes. Mais ces désinences supprimées servoient à marquer d'une manière très-sensible la construction des phrases, et la liaison des idées: il falloit donc y substituer une autre

flexions on which the Latin language depended, naturally. sought to express their ideas by the more circuitous but less artificial method of analysis; according to which each phrase is, as it were, built up of the single ideas which compose it, instead of their being all expressed by the modifications of one word. It was in this way that the Normans mutilated the Anglo-Saxon inflexions, and produced the modern English; and that other nations have, as Sismondi expresses it1, by a mutual compromise formed a sort of neutral language, which properly belongs to neither party, but is the language of the one or the other, deprived of its characteristic forms. By degrees the Germans, forming a small minority of the entire nation, disused their own language, even among themselves²: and the native population, forced to adapt themselves to the habits and convenience of their masters, and actuated by the disposition just noticed to analyse grammatical forms, substituted the several Romance languages for the ancient Latin.

§ 5. It is natural to suppose that the mode of speech formed by the process just described would be unsettled and fluctuating, and would vary in different parts of western Europe, according to the greater or less purity of the Latin spoken by the natives, the different proportions of the natives and invaders, and the different Teutonic dialects spoken by the latter: while it would

méthode, et c'est ce qui donna naissance à la grammaire analytique.' Schlegel, p. 24.

¹ See above, p. 22, note.

² German, however, was still used in the French court at the end of the minth century: Thierry, Lettres sur l'Histoire de France, p. 43, 220. See also Schlegel, p. 101. Bonamy, Mem. de l'Acad. des Inscriptions, vol. xxiv. p. 657.

guage of the rural population, lingua rustica Romana, or simply lingua rustica. This was a general term for all the varieties of language formed by the union of the Teutonic and Latin¹. The language used by Lewis the Germanic in the oath of 842, and by Charles king of France in the treaty of 860, is called lingua Romana². In the acts of the council of Tours, A.D. 813, the bishops are warned, 'ut-homilias quisque aperte transferre studeat in rusticam Romanam linguam aut Theotiscam. quo facilius cuncti possint intelligere quæ dicuntur.' A monk of Bobbio who wrote an account of the miracles of St. Columbanus about 950 A.D., describes a mountain near Bobbio thus, 'Alter vero qui est ad lævam nuncupatur rustica lingua Groppo altum,' i. e. Groppo alto3. The modern language spoken in Italy seems not to have been called lingua Romana in the middle ages, but to have been usually known by the name of lingua vulgaris or volgare4, as opposed to the lingua erudita, the Latin: numerous instances however occur where that name is applied to the languages of France and Spain, to the

¹ See Schlegel, p. 40. Daunou, Journal des Savans, 1823, p. 89.

² Raynouard, vol. ii. p. 2, 3. Thierry, Lettres sur l'Histoire de France, p. 204-6. Rochefort, Glossaire de la Langue Romane, vol. i. p. xx. xxi. Muratori, Diss. 32, citing Baluz. Capit. vol. ii. p. 144.

³ These passages are cited by Muratori, Diss. 32.

⁴ See Muratori, Diss. 32, vol. ii. p. 1019, D. Learned writers at a later period have however given the name of romanzo to the Italian: Raynouard, Gr. Comp. p. 374. In the following extract from the Tresor of Brunetto, Dante's master, it seems that, 'Romance after the manner of France,' is equivalent to 'French.' 'Et se aucuns demandoit pourquoi chis livre est ecris en roumans selon la raison de France, pour chou que nous sommes Italien, je diroie que c'est pour chou que nous sommes en France; l'autre pour chou que la parleure en est plus delitable et plus commune a toutes gens.' Cited in Ginguené, Hist. Litt. d'Italie, vol. i. p. 369.

Provencal, the French, the Spanish, and the Portuguese¹. This community of appellation does not afford any reason for supposing that the corruptions of the Latin in the different parts of western Europe were identical: there was a sufficient resemblance in their character, in the circumstances under which they had arisen, and in the classes of persons by whom they were spoken, to warrant their being included under a common name, in spite of minor differences. At the same time it cannot be doubted that the differences between them were not at first so great as they are now, and that in their early youth the children more resembled their common parent and one another²: as the English and Scotch, which were formed independently under the same circumstances have a closer resemblance both in words and structure, the nearer they approach their respective sources3. This is particularly seen in the French language, which formerly used the masculine and feminine terminations in o and a, since modified into e, as in the article lo for le, Cellas,

¹ See Ducange in Lingua Romana, romancier, romanitas, romane, romanire, romanum, romancium, romantium. Muratori, Diss. 32. Raynouard, Gr. Comp. p. 371-4. The modern Latin languages of Walachia and Switzerland, although they have departed widely from the original type, are called in those countries by the name of Romance, viz. linguaig romansch or rumonsch, and limba romanesca. See Diefenbach, Ueber die Romanischen Schriftsprachen, (Leipzig, 1831,) p. 21.

² 'Naturam enim ac genium linguarum considerans, quæ sensim mutationem patiuntur, veri simile reor, Italici populi linguam, quo propius accessit ad fontes sive ad sæcula latinitatis eo minus tum verbis tum modis dicendi a Latina matre potissimum sua dissensisse.' Muratori, vol. ii. p. 1037, C.

³ Willan, in Archæologia, vol. xvii. p. 164. On the independent origin of the Southern English and Scotch, see Jamieson, Dissertation on the Origin of the Scottish Language, p. 24, 25 (prefixed to his Dictionary).

Fontanas, Ferrerias, names of places, afterwards changed into Celles, Fontaines, Ferrières¹. The affinity indeed was so great that a person who spoke the vulgar Roman dialect would probably have been able to make himself understood in any part of western Europe: as we find it narrated by a monkish writer that in the reign of Charlemagne an Italian priest, who happened to meet a Spanish pilgrim in Germany, understood the conversation of the Spaniard as being an Italian²; whence it is evident that the Italian and Spanish were not then so

¹ See Raynouard, Gr. Comp. p. xii. Diez, Poesie der Troub. p. 325. The final a has in French passed into the e muet, as musa, muse, domina, dame, etc. In la however (which in old French was sometimes made le, Rayn. in J. des S. 1820, p. 199) ma, ta, and sa, it was retained. On le for la, see Orell, ibid. p. 7—9.

² Mabillon, Act. SS. Bened. sec. 3, Part II. p. 258, correctly explained by Raynouard, vol. i. Introd. p. xvi. Gr. Comp. xxix. and after him by Perticari, vol. i. p. 305. The remarks of the critic of Perticari, in the Florence Antologia, No. III. p. 356, that perhaps the pilgrim could talk Italian, or the monk understand Spanish, are untenable; for it is distinctly said that the priest, as being an Italian, understood the language of the Spaniard ('quoniam linguæ eius, eo quod esset Italus, notitiam habebat:') plainly implying that he understood it, not as having learned it, but in his character of an Italian. Schlegel, p. 50, remarks that this statement affords no proof of the identity of the languages then spoken in Italy and Spain, as even now an Italian and Spaniard understand one another tolerably without an interpreter. The general resemblance of these two languages is indeed so great, that a Venetian writer of the sixteenth century, introduced into a drama a Spanish character speaking his native language: thus putting the Spanish on the same footing with an Italian dialetto. See Gamba, Serie degli Scritti Impressi in Dialetto Veneziano (Venice, 1832), p. 75. Mr. Planta, in his Paper on the Romansh Language, says, that he had heard it stated as a fact, that two Catalonians travelling in the Grisons, found to their surprise 'that their native tongue was understood by the inhabitants, and that they could comprehend most of the language of the country.' Philos. Transactions, vol. 65, p. 154.

different as not to be mutually intelligible to natives of both countries. As has been already observed, M. Raynouard does not adopt the absurd fancy that the Romance or the Italian existed as the language of the lower orders of ancient Italy, in a shape little different from that which they bore in the thirteenth century: his theory is, that the Latin, by the influence of the Germans, was corrupted into an uniform language, called the Romance, spoken for some centuries, and at least as late as the reign. of Charlemagne, over the whole of western Europe: that this language is preserved unchanged in the Troubadour poetry and the early literature of Provence: and that it was gradually modified into the Italian, Spanish, Portuguese, French, modern Provencal and their various dialects, all of which he believes to have been derived indirectly indeed from the Latin, but directly from the Romance, and to have retained with different degrees of fidelity the forms of that language.

On the first statement of this hypothesis, it is obvious to enquire in what manner M. Raynouard understands that an uniform language arose on the ruins of the Latin. Languages may be diffused by colonisation or conquest; as the Greek was propagated in Asia Minor, Africa, Italy, Sicily, and Gaul; as the Latin in Gaul and Spain; as the Spanish and English in North and South America and the West Indies; but where were the conquests or the colonies of the Provençals? Or does he suppose that the Romance was diffused from Provence by the influence of the Troubadour literature? Nations however do not learn languages from poets, least of all from foreign poets; and some other cause must be found for the propagation of the Provençal language than the fame

of the Provençal minstrels1. If on the other hand, M. Raynouard does not suppose that the Romance was diffused from Provence as from a centre, he must conceive that the Romans over the chief part of Italy. Sicily, Sardinia, Corsica, Gaul, and Spain, when invaded at different periods by different Teutonic races, agreed without communication to corrupt the Latin into the self-same language; but unless he here calls in the assistance of a miracle, and supposes that as at Babel the tongues were confounded, so after the invasion of the Germans they were made uniform, it is difficult to understand how he accounts for such a prodigy. If he means that the Romance was spread over western Europe from a common centre², he is contradicted by history, which records no movements of population capable of bringing about this effect; if he means that accidentally all the natives of Italy, Gaul, and Spain, coincided in forming one and the same new language, he supposes an agreement to which no parallel can be furnished, and which is utterly incredible.

§ 6. The proofs of the original coincidence of the modern Romance languages with the Provençal, which M. Raynouard collects with great industry and learning, and which will be presently examined in detail, are of two kinds. 1. Words and forms in which the Italian,

¹ Muratori, *Diss.* 33, says, that the few words which came from Provence into Italy, were indeed used by some writers, but not adopted by the people. On the small influence of literature on the language of the lower orders, see *Philol. Museum*, vol. ii. p. 248.

² It would seem that this is M. Raynouard's meaning, as in the *Journal des Savans*, 1829, p. 672, he states, that *nessuno* was received into the Italian from the Trouvères, that *adesso*, was taken from *udes* as used by the Troubadours and Trouvères.

Spanish, and French agree with the Provencal, but in which the Provençal agrees with the Latin. 2. Words and forms in which the Italian, Spanish, and French agree with the Provencal but in which the Provencal disagrees with the Latin. Of these two kinds of proofs, the first is obviously open to the following objection. Everybody admits that the Italian, Spanish, Provençal, and French, were derived from the Latin: M. Ravnouard's position is that the Provençal, under the name of the Romance, was intermediate between the Latin and the other modern languages. Now in order to support this assertion, it behaves him to show forms in those languages which can only be accounted for on the supposition of such an intermediate language, and could not have been directly derived from the Latin. Instead of confining himself to this species of proof, he often alleges forms in Italian, Spanish and French, which he derives from the Provençal, but which may just as well be referred to the Latin, and by no means necessitate the hypothesis of a transition language. Whenever the Provencal form is not a necessary condition for the existence of the Italian, Spanish, or French form, the coincidence of the two goes for nothing in proof of the interposition of the Provençal between the Latin and the modern language, or at most is only consistent with M. Raynouard might have put his argument in this shape: part of the Italian, Spanish, and French languages can only be accounted for on the supposition of the Provencal having succeeded the Latin; the other part, though consistent with the supposition that those languages immediately succeeded the Latin, is equally consistent with the supposition that they did not immediately succeed it. Without making this distinction, M. Raynouard is liable to the objection that a large part of his proofs are good for nothing, which may induce an inconsiderate reader to condemn the whole because the majority are untenable. He himself clearly points out this distinction in some passages of his treatise, which will be hereafter noticed¹: nevertheless he has not kept it constantly in view, and has often alleged in proof of the derivation of the modern Latin languages from the Provençal, facts which can be equally well accounted for on the supposition of their being all parallel languages derived from a common source.

The second class of proofs above mentioned refers to words, forms, and idioms, in which all the modern languages differ from the Latin; such as, the use of articles, and the disuse of cases, the formation of nouns from the accusative of Latin nouns of the third declension, the use of affirmative expletives, which afterwards became negative, as the derivatives of mica, res, passus, etc.; the introduction of foreign words, as the adverb tosto, tost, quick; the derivatives of the German herberge, frisch, reich, mark, helm, fein, lassen, and many others which occur in all the Romance languages. The argument founded on these facts is, however, one which may as well be employed against M. Raynouard's theory as in its support: for why does the agreement of the Provencal with the Italian, Spanish, or French, in forms or words not traceable to the Latin, prove that the latter languages borrowed them from the Provencal rather

¹ Gram. Comp. p. 70, 265.

See note (D.) at the end.

than the converse? All we know is, that the Latin disappeared as a living language from western Europe soon after the sixth century, and that a new form of speech was substituted in its place; which, as far as we can learn from the earliest monuments of it, had a different character in Spain, in Italy, in Northern and in Southern France: in these several Latin dialects we find numerous forms, idioms, and words, not borrowed from the Latin, but corresponding or identical with one another. On what ground are we to conclude, from the mere fact of agreement and apart from historical evidence, that one of these dialects in particular made the innovations in question, and afterwards communicated them to the others? The Provencal may have had a literature and a standard of composition before the others, but there is no reason to suppose that as a language it existed before them1. No error indeed has been more frequent among speculators in language, nor is there any which it requires greater vigilance to avoid, than the confusion of cognate with affiliated languages. Where we see in two languages corresponding forms or words, nothing is easier, or apparently safer, than to derive one from the other. Thus if we find that the Greeks said Boûs, Foûvos, Foûvos, φάω, λέγω, that the

¹ Specimens of Italian forms, chiefly names of places, occurring in documents of the eighth and following centuries, are collected in Muratori, Diss. 32. The language of the notaries, which, as Muratori has shown, was evidently not a spoken language, is an unquestionable proof of the disuse of the Latin soon after the invasion of Italy, Spain, and Gaul. Schlegel, p. 5, calls the Provençal the eldest daughter of the Latin: an assumption for which there appears to me to be no ground, if it means that the Provençal existed as a spoken language before the other Romance tongues.

Romans said bos, vinum, vicus, faor, lego: it is immediately concluded that the latter were borrowed from the former: and a Latin lexicographer would think that he had not performed his duty unless he had duly registered the Greek as the originals of the Latin words. In like manner a German etymologist will inform his readers that werk is derived from Fépyov, and wein from Foivos. But what evidence have we that these words were not separately derived from a common source; and that the Latins might not have used vinum and bos, the Germans werk and wein, if the natives of Greece had never developed their language, and had been crushed in their germ by a barbarous immigration? It is on this mistaken principle, that Dr. Johnson has arranged the etymological part (which however he chiefly borrowed from others) of his English dictionary. Whenever he is at a loss for an etymology, he sets down the corresponding word in Dutch or German, or he derives an English from a German word¹; and sometimes he even makes a parallel increased form the origin of the English word2: as if we had not only borrowed our radical words. but even our formations from our neighbours! In kindred languages derived from a common stock, there is always a correspondence both of roots and formations; more or less close, according to the length of time since

^{1 &#}x27;From are, an eagle, I believe our word eyrie derived; Johnson derived it from ei, an egg, properly ey, German: but I do not believe there is a word in the English language, (unless very modern,) of German origin.... The words which we have in common with the Germans are not borrowed from them, but drawn from a higher source.' Herbert's Icelandic Poetry, p. 121, note.

² For instance, he derives the word manikin from manniken Dutch. See Phil. Mus. vol. i. p. 680.

they parted from the parent-stem, and the various disturbing causes to which both or either have since that divergence been exposed. It is therefore of no avail, in proof of a derivation or dependence, to show a scheme of parallel forms, idioms, and words, in several languages: they may have arisen from a common source under similar circumstances; and we may be led to mistake for cause and effect, what in truth are only similar effects of the same cause. Now such, as I conceive, is the case of the Romance languages: they all owed their origin to the same cause, viz. the permanent subjugation by Teutonic races of a people speaking Latin; and there is nothing in their character which cannot be explained without supposing a nearer affinity. They have just the amount of resemblance which might have been expected in languages derived from the same original, and just the amount of difference which might have been expected in languages formed under similar circumstances independently of each other:

> Facies non omnibus una, Nec diversa tamen, qualem decet esse sororum.

A comparison of the analogous forms in cognate languages is calculated to throw light both on their relation to each other, and on the causes to which their affinity is owing: as the sculpture of the Greeks may be illustrated by comparing it with their poetry, and their poetry by comparing it with their sculpture. The mistake too often committed with respect to languages consists, not in comparing them, but in making a wrong use of the comparison, by discovering parentage where there is only fraternity: as any one would err who should derive the

sculpture of the Greeks from their poetry, or their poetry from their sculpture; the truth being that they are both the products of the national taste and genius of that people, which they serve in common to illustrate.

M. Raynouard, in answer to some remarks of Schlegel on the independent origin of the Romance languages, says that 'if each nation had formed its language separately, doubtless one of those languages would have presented several essential and indispensable forms which the other languages would have wanted, such for instance as the use of a passive voice, as in Latin1.' This example is unhappily chosen. There is no part of the Latin language which was more likely to disappear under the German influence than the formation of a passive voice by inflexion. The Germans themselves made the passive by means of auxiliary verbs; and would therefore according to their way of speaking Latin doubtless imitate their own idiom. The passive voice of the Latin verb had already degenerated from its original model, and the Greek system of inflexion had been much encroached upon by the formation of some tenses with auxiliary verbs introduced by a foreign influence at some early period of the Latin language?. The inflexions of the Latin are precisely that part of it which was mutilated by the German influence; and there is only one instance in which any trace of them

^{1 &#}x27;Si chaque peuple avait composé son idiôme isolément, sans doute quelqu'un de ces idiômes eût offert plusieurs formes essentielles et indispensables qui ne se fussent pas trouvées dans les autres idiômes, telles par exemple que de conserver un passif ainsi que les Latins,' etc. Journal des Savans, 1818, p. 591.

² See above, p. 10¹. Müller's Etrusker, vol. i. p. 23. Philol. Mus. vol. i. p. 669.

has been preserved. But in this instance, viz. the retention of the nominative and accusative cases, all the languages do not agree; for we find that while this inflexion was preserved in the languages of oc and oil, there is no trace of its having ever existed in Italian and Spanish¹. This therefore is an example, in respect of a rule which M. Raynouard himself calls fundamental, of the occurrence of an essential form in some of those languages which is absent in others.

When we come to the detailed examination of the corresponding forms in the Romance languages, it will be shown that there are many traces of the Latin preserved in the Italian and Spanish which have been lost in the Provencal; and consequently could not have been preserved in those languages if they had been derived from the latter in which those features of the model had been obliterated. There are however other difficulties of a more general nature to which M. Ravnouard's theory gives rise, and of which it affords no explanation. If the Romance of the Troubadours was once the universal language of western Europe, which was afterwards modified into distinct dialects; there appears to be no reason why any one of these dialects should be more like it than another. Now there is no doubt, and it is distinctly admitted by M. Raynouard², that the modern Provencal

¹ See below, ch. 2, § 2.

² 'Il (l'idiôme provençal) a peu varié depuis les troubadours': says M. Raynouard, in the *Journal des Sav.* 1818, p. 589. See him also in *Journal des Sav.* 1824, p. 92—7, in a review of a dictionary of the Limousin patois, and ibid. p. 174—80, in a review of a Languedocian dictionary. In p. 96, he points out some words in Low Limousin which occur in the language of the Troubadours, and not in the other Romance languages.

has a far closer resemblance than any other modern language to the Romance of the Troubadour poetry: especially if we take specimens of that language as it existed about the eleventh century, at which time the Italian and Spanish had been completely fixed in their present form. But if the Romance, as used by the early Provencal poets, was once the language of Italy and Spain, there is no reason why the Italian and Spanish should have departed from it so much more widely than the modern Provencal. It seems far more natural to suppose that the Troubadours wrote in the language of their country, the langue d'oc, which was from the beginning distinct from the Italian, and the Spanish, and the langue d'oil, (although it resembled the latter much more closely than the others,) and that the modern Provencal has arisen from the natural development of it, in the same way that the modern French has been developed from the language of Villehardouin and the Trouvères.

Another important fact, directly opposed to the theory of an universal Romance language, is the vast number of modern Romance dialects which prevail in France, Spain, Switzerland, the Tyrol, Italy, and the neighbouring islands. The patois of the langue d'oil in Northern France and Flanders²: of the langue d'oc in Southern

¹ See a relation of the arrival of Charles, Duke of Savoy, at Nice, in 1488, in the *langue vulgaire*, published in Durante, *Histoire de Nice*, vol. ii. p. 182—4. (Turin, 1893.)

² Champollion-Figéac in Balbi's Atlas Ethnogr. du Globe, tab. 12, enumerates the following dialects of the French. 1. Picard. 2. Flemish. 3. Norman. 4. Walloon or Rouchi: spoken in Picardy, Normandy, French and Dutch Flanders, and the Dutch provinces of Namur and Liege. 5. French Breton. 6. Champenois. 7. Lorrain and Bourgnignon. 8. Franc-comtois. 9. Neufchâtelois. 10. Or-

France, Savoy, Piedmont, the Grisons, and the county of Nice, are very numerous, and are distinguished by important differences¹. In Spain there are the dialects of Leon, the Asturias, Aragon, Andalusia, Murcia, Galicia, Catalonia, and Valencia: the two latter of which, as well as the language of the Balearic islands², resemble the langue d'oc more than the Castilian or written Spanish³. The islands of Corsica and Sardinia appear to possess native dialects different from any other Romance tongue⁴. In Italy not only are the languages of the northern and

léanais. 11. Angloin. 12. Manceau: spoken in a part of Britany, in Champagne, Lorraine, a part of Burgundy, in Franche comté, the Swiss canton of Neufchâtel, the Orleanese, Anjou, and Maine. See also Raynouard, Journal des Sav. 1818, p. 282. Mélanges sur les Langues, (Paris, 1831,) where numerous specimens of the different French patois are collected, and Adelung's Mithridates, vol. ii. p. 578. [Compare Burguy, Grammaire de la Langue d'Oil (Berlin, 1853), vol. i. p. 14.]

- ¹ There are several dictionaries of different dialects of the langue d'oc: two are mentioned above, p. 41². There are also two dictionaries of the Eastern Provençal, published in the last century, and a more recent work published at Marseilles in a cheap form. There are likewise a few books in the same language; particularly some poems by M. Diouloufet of Aix, and a poem in the Nice dialect, (which partakes more of the Genoese,) by M. Ranchez of Nice. A curious specimen of the popular Provençal may be seen in Mr. Hayward's Translation of Faust, p. 286, ed. 2.
 - ² Bastero, Crusca Provenzale, p. 21, quoted by Diez, p. 5.
- ³ On the relation of the Valencian and Catalonian to the Provençal, see Raynouard, vol. i. Intro. p. xiii.; Gr. Comp. p. xxxviii. In the Universities of Vicenza and Vercelli, the schools were divided into four universities of nations, as follows. 1. French, English and Normans. 2. Italians. 3. Provençals, Spanish, and Catalans. 4. Germans. Savigny, Gesch. des R. R. c. 21. On the Catalonian language and literature, see Jaubert de Passa, Recherches Historiques sur la Langue Catalane, in Mélanges sur les Langues, p. 297—431.
- ⁴ Diefenbach, Ueber die Jetzigen Romanischen Schriftsprachen, p. 21, (Leipzig, 1831,) states that he was informed by a Sardinian of good

southern districts distinguished from each other by certain broad marks of difference, but almost every town which was once independent has a dialect of its own. differing from the common or written Italian, both in its inflexions and its terms1. Muratori says, that there is scarcely a city of Italy which is not distinguished from others by its pronunciation, the sound of its accents, the terminations of its words, and its peculiar terms. Much more does the dialect of one province differ from that of another: sometimes there is such a difference that even the Italians of other provinces, although they speak the common language, can with difficulty understand each other². How are diversities of this kind to be reconciled with the theory of an uniform language, formed on the ruins of the Latin? Is it to be supposed that these irregularities and discordancies grew up spontaneously in

authority that, 'besides the language of foreign introduction, the Catalonian and Italian, there are in Sardinia three Romance dialects, one verging towards the Spanish, another towards the south Italian, the third still a kind of Romana rustica closely resembling the ancient Latin both in forms and words. This latter is still spoken in about twenty-four villages in the interior of the country.' See Adelung's Mithridates, vol. ii. p. 528—34. Niebuhr, vol. i. p. 144, says, that 'specimens of the Sardinian language from the civilized districts exhibit peculiarities which are more than varieties of dialect, and indicate a Romance language of a distinct kind.'

¹ The literature of the Italian dialects is very rich, and there are few of any importance (except that of Genoa,) which have not their dictionary. Thus dictionaries have been published of the Sicilian, Neapolitan, Venetian, Bolognese, Ferrarese, Veronese, Mantuan, Brescian, Bergamasque, Milanese, and Piedmontese dialects. See Adelung's Mithridates, vol. ii. p. 496—528; [and concerning the dialects of northern Italy with consonant terminations, Biondelli, Saggio dei Dialetti Gallo-Italici. 2 vols. 8vo. Milan. 1868.]

² Dissert. 32, vol. ii. p. 1038, A. See also Denina, Observations sur les Dialectes, particulièrement sur ceux d'Italie. Mémoires de l'Acadé.

the midst of an universal Roman language, as the multifarious Christian sects arose out of the bosom of the universal Roman Church? Such a hypothesis would be directly opposed to all experience. The progress of language is to widen the dominion of prevailing analogies; to enlarge rules, and to diminish anomalies: to root out what is local, partial, and peculiar: to carry the speech of the towns into the country: to abolish provincialisms: and to spread the language of literature and of educated persons in the place of dialects less cultivated and less generally understood. Thus the English gradually encroaches on the Welsh, along the borders of Wales; thus the Gaelic and Irish are slowly giving way in Scotland¹ and Ireland², and the Cornish language, though spoken in the memory of living persons, has been completely extirpated in Cornwall. The diffusion of the Latin over Italy, in the place of the Etruscan, the Oscan, the Umbrian, the Ligurian, and other native dialects, has been already noticed. Much easier however is this process when the inferior dialect is threatened by a language

mie de Berlin, 1797. Classe des Belles Lettres, p. 64—90, and Baretti's Account of Italy, vol. ii. c. 30. There is also the Romance language of Walachia, on the origin of which see the Wiener Jahrbücher, vol. 46, p. 77—88. [Diez, Rom. Gramm. vol. i. p. 89.]

¹ Johnson, Journey to the Hebrides, p. 277, speaking of the Highlanders, says, 'Of what they had before the late conquest of their country, there remain only their language and their poverty. Their language is attacked on every side. Schools are erected, in which English only is taught, and there were lately some who thought it reasonable to refuse them a version of the holy Scriptures, that they might have no monument of their mother tongue.' See also note (E.) at the end.

² On the measures taken by the government to diffuse the English and to extinguish the Irish language in Ireland, see Anderson, *Historical Sketches of the Native Irish*, sect. 3.

of the same family; as was the case with the propagation of the Attic Greek in the age of Philip and Alexander: and such is the case with the French, the Italian, and the Spanish, as they come in contact with the dialects spoken in the countries where they are the ruling languages1. As the progress of civilization is to destrov local usages and laws, to break down distinctions both of place and rank, and to fuse large bodies of men into an uniform and compact whole; so the progress of language is to substitute one polished idiom in the place of numerous uncultivated dialects. In supposing, therefore, that the multiplicity of Romance dialects which now prevail over western Europe, were capricious aberrations from a single type, as established after the disturbance of the German invasion, and that their difference, having once been almost imperceptible, became such as we now see it², M. Raynouard makes a supposition at

¹ Mr. Marshall, in explaining his reasons for making a collection of the Provincialisms of Yorkshire, has a remark which applies to this subject. 'Finding (he says) in this particular instance, a declining language which is unknown to the public, but which, it is highly probable, contains more ample remains of the ancient language of the central parts of this island, than any other which is now spoken, I was willing to do my best endeavour towards arresting it in its present form, before the general blaze of fashion and refinement, which has already spread its dawn even over this secluded district, shall have buried it irretrievably in obscurity.' Rural Economy of Yorkshire, vol. ii. p. 302.

² 'Anche senza prova di fatto la ragione fa congetturare, ch' essendovi fra gli antichi Italiani minor cultura e minor commercio, la differenza tra le loro favelle dovea essere maggiore di quella che è ai nostri tempi.' Niccolini, *Discorso*, etc. p. 22, note. See also Lanzi, vol. i. p. 24. 'The little connection there is in mountainous countries between the inhabitants of the different vallies, and the absolute independence of each jurisdiction in this district, which still lessens the frequency of their intercourse, also accounts in a great measure for the

variance with all analogy, and represents the stream of language as flowing back upon its source.

Perticari attempts to get rid of this difficulty by saving, that as the empire of Charlemagne was partitioned. so the common Romance language was divided into dialects, as languages follow the government¹. But if languages follow the government, how came the universal Romance language to be formed? When the East and West Goths, the Lombards, Burgundians, and Franks. had separate and independent empires, how could an uniform language arise through their influence? And if each of these several states had a peculiar dialect, it surely will not be contended that Charlemagne by uniting them into one empire, could during his lifetime have removed all these varieties, and established a common mode of speech. There is scarcely any change which requires more time than a change of language. Obedience to foreign laws may be enforced after the loss of a battle: outward observance of a new religion may in a short time be brought about by persecution or conquest; but no terror can inculcate the use of a new language, even if there were any motive for introducing it: for its use does not depend on the mere desire to use it, but is the result of early and long-continued habit. All explana-

variety of secondary dialects subsisting in almost every different community or even village: 'says Mr. Planta, *Philos. Transactions*, vol. lxvi. p. 144, speaking of the Romance of the Grisons.

^{1.} Ma intanto quella lingua, che prima era una, si divise in molte: perciocchè le lingue seguono le condizioni de' governi. E come per la novità de' feudi e de' baronaggi quel francese imperio si squarciò a brani così il comune romano anch'esso fu partito nel Limosino, nel Provenzale, nell' Italico, nel Vallone, nel Catalano, ed in altri.' Perticari, Difesa di Dante, c. 11.

tions therefore which suppose sudden and extensive revolutions of language produced by the mere influence of government, unassisted by the mixture of population, are liable to strong objections. It would moreover be easy to show that the Romance dialects have not always folowed the government; for instance, the French of Dutch Flanders has existed not in consequence but in spite of the government. If Perticari had said that the Romance languages followed the *original* government, that is, the number and influence of the German invaders, who first occupied the country when its inhabitants spoke Latin, he probably would have been much nearer the truth.

Nevertheless, when it is said that the natural course of things is, that differences of dialects are softened down; it is necessary to distinguish between changes arising from the natural development of a language, and from the introduction of new or foreign words, and those caused by the fresh creation of separate forms and analogies, so as to give rise to a new dialect. If there is a nation speaking the same language, which by colonisa-

¹ As to the small influence of government in producing changes of language, see Prichard on the Eastern Origin of the Celtic Nations, p. 8. 'The pertinacious adherence of mankind to their mother tongue, (says Mr. Anderson, in his work on the Irish language,) might be verified by a number of remarkable proofs. "It is a curious fact, (says a writer in the Statistical Account of Scotland, vol. xx. p. 490,) that the hills of King's seat and Craigy Barns, which form the lower boundary of Dowally (parish in Perthshire) have been for centuries the separatory barrier of the English and Gaelic. In the first house below them, the English is and has been spoken, and the Gaelic in the first house, not above a mile distant, above them." In different parts of Ireland something similar to this will be found. It is said, that on crossing the river Barrow, a very striking difference is observable; on the eastern bank, English is spoken, and Irish scarcely known; a little

tion or conquest forms two new societies, the languages of those three nations, which at first were identical, will become continually more and more unlike one another, and their common stock, in proportion as the time elapsed since their separation increases. Analogies which one nation will extend, another will narrow or even disuse: in one language the exception will supplant the rule, in another the rule will swallow up all exceptions: different words will be contracted: different contractions will be used: different modes of forming new derivatives will be followed; accidents of literature, taste, form of government, manners, foreign influence and intercourse, will variously affect the growth of the respective languages of Thus the Portuguese of Brazil has become each nation. in many respects different from that of the mother country, chiefly by the introduction of many new words1: and the language of the North American states would, within no short time, have differed widely from that of England, in using many peculiar idioms, in introducing new words, and attaching different senses to the same words, (the grammatical forms and syntax remaining indeed the same;) if the frequent and rapid communication between the two countries, and the mutual influence of their literature had not kept up an uniform standard of composition. In like manner I conceive that the Italian and Spanish, and the languages of oc and oil, being together with their dialects formed independently by the German working on the Latin, had in their origin fundamental differences, but still bore a strong likeness to

way interior it is quite the reverse.' Hist. Sketches of the Native Irish, p. 195.

¹ See Balbi, Atlas Ethnogr.

each other: as years rolled on, each language assumed a more peculiar form by dealing differently with the wreck which it had saved from the Latin: by altering more or less the original forms, and by following different principles of inflexion. In this respect languages are like human beings: the older they become, the more strongly marked are their distinctive features. The same would doubtless be the course of the several dialects of each language: every dialect would doubtless assume in the process of time a more distinct and individual charac-But there is nothing in the development of language, independently of political circumstances, which leads to the arbitrary creation of separate dialects distinguished by their inflexions and forms: on the contrary, the influence of government and literature tends always to spread the use of the language of the ruling classes and the writers, to the prejudice of local dialects: an effect which in modern times has been immensely assisted by the use of printing, and the facilities given to the circulation of newspapers and books, and to the carriage of persons. It seems to me, therefore, that although the difference of actually existing dialects is increased in the lapse of time, yet that dialects are not formed by mere caprice, without external and political influence: and that the spontaneous generation of the countless Romance dialects now spoken in Europe from an universal language, which has existed since the extinction of the Latin, is just as improbable as the spontaneous generation of insects and reptiles.

§ 7. Having offered these general considerations on M. Raynouard's views with regard to the origin of the modern Latin languages, I shall proceed to a detailed

examination of his proofs: for which purpose it will be necessary to repeat at length the principal parts of his Romance Grammar, as the language to which it refers, and the rules which it contains, are not generally known, like those of the living languages to which it is allied. But before this comparison is begun, it is first necessary to determine what name shall be given to the language which is to serve as the standard of comparison. 'There is (as Schlegel has remarked) some difficulty in finding a proper designation for the language of the Troubadours. The names of Provençal, Limousin, and Catalonian, which have been applied to it, are too narrow, as they only comprehend one of the districts where it was spoken, and as its use extended over a much wider territory. On the other hand, the name of Romance is too indefinite!.' M. Raynouard constantly applies the name of Romance to the language of the Troubadours; and M. Champollion-Figéac, who has since discussed this subject, adheres to his use of the word, and makes the Romance language a common term for the dialects of Provence, Dauphiny, the Lyonese, Auvergne, Limousin, Languedoc, Gascony, and Catalonia². In the following pages, however, I shall attempt to show that although

¹ Observations, p. 40. See also Biester on Oc and Oyl, Philol. Mus. vol. ii. p. 340.

² Charte de Commune en Langue Romane, (Paris, 1829,) p. 7—18. M. Roquefort has published a dictionary of the ancient French language, which he has entitled 'Glossaire de la Langue Romane.' As well might the author of an Anglo-Saxon dictionary call it a dictionary of the Teutonic language. M. Roquefort has, however, full as much right to call the ancient langue d'oil, as M. Raynouard has to call the ancient langue d'oc, the Romance language. Compare Berrington's Literary History of the Middle Ages, p. 337. [Concerning the use of the word Romance, see Diez, Rom. Gramm. vol. i. p. 72.]

the ancient language of oc, the language spoken in Southern France and Catalonia, was a Romance language, it was not the Romance language: that it was merely one of the dialects arising out of the change produced in the Latin by the Teutonic invasion. Nor does M. Raynouard merely employ an ambiguous, and therefore an inconvenient term: but he founds an argument in favour of his theory upon that ambiguity; when he attempts to show that the Italian, the Spanish, and the French, were once identical with the Troubadour language, because they were all called Romance languages2. In this mode of reasoning, however, he appears to me to have committed the same error as a person who having undertaken to write a history of trees, and described those kinds, such as the ash and the oak, which are deciduous. should thence conclude that the ilex and the olive are deciduous, because they are also trees. The language of Southern France was doubtless a Romance language, as were the languages of Northern France, Spain, Italy, Savoy, and parts of Switzerland and the Tyrol. But it does not follow that what is true of the language of

l'it is generally admitted that the word Romance was first employed to signify the Roman language as spoken in the European provinces of the empire; and that in its most extensive sense it comprised all the dialects of which the basis was the vulgar Latin, whatever might be the other materials which entered into their construction. The name was therefore equally applicable to the Italian, the Spanish, and French, and was sometimes, though incorrectly, applied to the vulgar languages of other countries.' Ellis, Specimens of Early English Romances, vol. i. p. 1. See also Walter Scott's article on Romance, near the beginning, in the Supplement to the Encyclopedia Britannica. A passage occurs in Giraldus Cambrensis, where the common English is called Romance. See Ritson's Ancient English Romances, vol. i. p. 12—18.

³ Gr. Comp. p. 371.

Southern France is also true of the Spanish or Italian, because they were all three Romance languages, any more than it follows that lions ruminate, as well as oxen, because they are both animals. There is perhaps no name for the language in question which is wholly unexceptionable: nevertheless the appellation Provencal, as Diez remarks, deserves the preference. The historians of the Crusades apply the term Provincia to all the south of France, distinguishing the inhabitants of the northern and southern parts of that country by the names Francigenæ and Provinciales: an ancient Grammar of the langue d'oc is called Donatus Provincialis; and Dante, as well as a contemporary biographer of a troubadour, speaks of the Provencal language¹. It may be moreover remarked, that although it might be inconvenient to give the name of Provencal to the language of Catalonia, the examples cited by M. Raynouard are almost without exception taken from the poems of troubadours who were strictly natives of Provence, in the extended sense of that word.

¹ Diez, Poesie der Troubadours, p. 5-12.

CHAPTER II.

Formation of the Romance Articles and Nouns from the Latin.

§ 1. ARTICLES.

THE utility of articles, and especially of the definite article, is so obvious, that there is no wonder that they should be gradually introduced by the effort which is constantly perceivable in language, to analyse and separately to express every idea. Thus we know that in the early Greek language there were no definite articles: but in the interval of time which elapsed between the ancient epic poets and the first prose writers, the pronoun à had become a definite article. The same transfer of the German demonstrative pronoun der, and of the Anglo-Saxon pronoun thæt1, to the sense of a definite article, likewise took place in the gradual development of the language, and without external influence. those languages likewise the numeral one, by a similar process of abstraction, obtained the sense of the indefinite article. It is probable that the sudden change which the Latin underwent in this respect, at the time of the German invasion, was the consequence rather of the

¹ See Rask, A. S. Grammar, § 146.

tendency just described, than of the imitation of the Teutonic idiom. It seems more than doubtful whether the use even of the definite article had at that era been introduced into the Teutonic languages: and it is probable that we shall most nearly approach the truth, if we suppose that when the Latin was by that event put into a state favourable to a new development of its grammatical forms, it obtained the use of articles, and adopted for them those words which appear naturally to suggest themselves as most convenient for this purpose. Hence unus was taken as the indefinite, and ille as the definite article: and their forms and inflexions underwent those changes which will be explained when we speak of the formation of the modern nouns.

The following scheme exhibits the structure of the Provencal definite article: the masculine singular (as will be shown below) is formed from the Latin accusative illum, by rejecting either the first or the last syllable: the masculine plural is partly formed from the Latin nominative, partly from the accusative : els and los being made out of illos; ill and li from illi: the feminine plural is formed from the Latin accusative illas. The genitive, dative, and ablative cases have completely disappeared, and their forms are replaced by the use of prepositions; de being prefixed in order to give the sense of the genitive and ablative, a (from ad) of the dative, and a (from ab) of the ablative. It will be observed that in the masculine plural, de li and de los, a li and a los, the forms derived from both the Latin nominative and accusative. are placed after the preposition: in general, however, as

¹ See below in these prepositions.

will appear when we come to the nouns, the prepositions govern the Provençal accusative.

Sing	ULAR.	PLURAL.	
MASC.	FEM.	Masc.	FEM.
El, lo	ill, la	Ill, li, els, los	las
de lo, del	de la	de li, de los, dels, des	de las
a lo, al, el,	a la	a li, a los, als, as	a las ¹ .
	Vol.	i. p. 38-44. Gr. Rom. p.	13—24.

All the modern Latin languages have formed their definite article from ille, and exhibit nearly the same modifications as those which appear in the Provençal. El, which is the common Spanish form, occurs in old French and Italian: lo also occurs in old French, as well as del, al, dels, als, and els, from which have been formed by the suppression of l or its change into u, so prevalent in that language, deu, du, au, des, aux, and ès: los and las, by changes likewise of frequent occurrence, became les. It should be observed that the Spanish exhibits no trace of li, (from illi,) and the Italian no trace of los, (from illos,) and that the Italian made the feminine plural le, (from illa,) whereas the Spanish agreed with the Provencal in forming it from illas. These characteristic differences will be again adverted to, when we speak of the nouns. (Gr. Comp. p. 2—19.)

Several modern grammarians have thought that the articles in the Romance languages have supplied the place of the Latin inflexions of the nouns to which they are prefixed. Thus the Italian grammarians call their articles segnacasi; and M. Raynouard says, that 'the

¹ I have not inserted the mere varieties of orthography, as elh for el, tll for il, etc. See Gr. Rom. p. 79—116.

use of articles has delivered the modern languages from the slavery of the Latin declensions, without diminishing the clearness of the expression.' (Vol. i. p. 44.) This is, however, an erroneous view of the subject. The use of the Latin nominative and accusative has been supplied by a certain collocation of words, of the genitive, dative, and ablative, by prepositions. Neither of the articles has any influence whatever in giving to nouns the meanings expressed by the Latin cases. In languages which have both cases and articles, the article is as much inflected as the noun to which it belongs.

§ 2. FORMS AND INFLEXIONS OF NOUNS.

We come now to the nouns, which we shall consider under the heads of their form, their mode of declension, their gender, and their derivative terminations; and by these means be enabled to judge how far the changes which they underwent in the several modern languages support M. Raynouard's theory with regard to the universal prevalence of the Provençal, and the derivation of the other Romance languages from it as a common type.

The entire confusion of cases which prevailed in the Latin language after the German invasion, may be seen in many legal instruments of the middle ages; and although we may concede to Muratori that the Latin of the notaries was not a spoken language, still it is impossible to conceive that charters and deeds would have been composed in a barbarous and ungrammatical jargon,

when the pure language was current in any part of the community. The following extract from a Pisan deed of sale, of 720 A.D. may serve as a specimen of this language. 'In nomine Domini dei nostris Jesum Christi, regnante domno nostro Liutprand rege, anno hoctavo sup die quartam kalendis Februari, per inditione tertia, constant me Sunduald, vir honorabilis, hac dies arvitrium bone mee voluntatis ... eniente, neque aliquis me suadente, nisi bono animus meus, vindedisse et vindedi, tradedisse et tradedi tivi Filicausi medietatem de casa meas infra civitatem cum gronda sua livera tam solamentum sine grondas, etc1.' In this language it is not always possible to distinguish between the proper terminations of the cases and the corruptions of a vicious pronunciation: thus in some of the above instances, as 'in nomine Domini nostris Jesum Christi,' 'hac dies' 'aliquis suadente,' 'bono animus meus,' 'de casa meas,' the Latin cases are used at random: in others however, such as 'sub die quartam,' 'per inditione tertia,' it is uncertain whether it is not the pronunciation which is in fault, and whether the final m was not dropped from diem and indictionem tertiam, as 'bono animus meus' probably meant 'bonum animus meus.' The omission of the final m and n occurs again in the same instrument in other words, as ligname for lignamen, nove for novem, hanc cartula for hanc cartulam, venditionem a me facta for venditionem a me factam, dece for decem, etc.

A rhythmical poem, written in vulgar Latin about 871 A.D. on the imprisonment of the Emperor Lewis II. by Adelchis duke of Beneventum, offers another speci-

¹ Murat. Ant. It. vol. iii. p. 1003.

men of the state of the ancient during its transition into the modern language¹.

Audite omnes fines terræ orrore cum tristitia
Quale scelus fuid factum Benevento civitas.
Lluduicum comprenderunt santo pio Augustio².
Beneventani se adunarunt ad unum consilium.
Adalferio loquebatur, et dicebant principi:
'Si nos eum vivum dimitemus, certe nos peribimus.
Celus magnum præparavit in istam provintiam:
Regnum nostrum nobis tollit; nos habet pro nihilum:
Plures mala nobis fecit: rectum est ut moriad³.'
Deposuerunt sancto pio de suo palatio.
Adalferio illum ducebat usque ad pretorium, etc.

These verses offer numerous instances of the confusion of cases: but Lluduicum sancto pio Augustio, Adalferio loquebatur, deposuerunt sancto pio, Adalferio ducebat, appear to be corruptions by pronunciation of sanctum pium Augustium, Adalferium and sanctum pium: as in the same poem 'leto animo habebat de illo quo fecerat' is put instead of 'letum animum habebat de illo quod fecerat',' not by a confusion of the ablative and accusative cases, but by the corruption of the termination of the accusative. So in the following instances collected by M. Raynouard, (vol. i. p. 18—22,) from Italian, Spanish, and French instruments of the middle ages, the accusative case is probably

¹ Murat. Ant. It. vol. iii. p. 711. An explanation of the circumstances which occasioned this popular poem is given by Sismondi, Litter. du Midi, tom. i. p. 23.

² Augustio is a conjecture mentioned by Muratori. The MS. has Augusto. In the first line, for errore I have written orrore, i.e. horrore.

³ That is, moriat, for moriatur.

⁴ Muratori mistakes the meaning of this line, in supposing habebat to be here put for abibat.

everywhere meant, though its characteristic letter is often dropped for facility of pronunciation.

'Ab hodiernum die: absque ullo dolo aut vim: ad die presente: ad ipso rio: adversus apostolico viro: ante valueo et orto: contra hoste barbaro: cum omnes res ad se pertinentes: cum pectus inscium: de quam præfatam portionem; ex successionem: infra valle: intra comitatu nostro: per mandato suo: per arte: pro panem: pro supradictas sex uncias: pro mercedem animæ meæ: propter amorem dei et vita æterna : sine præmium : sine rixas: usque memorato loco: versum palude: ubi nepte mea instituemus abbatissam: bona intentione monstrant mihi e faciunt Saracenis bona acolhenza.' The tendency to the use of the accusative case in particular appears in many places: thus in two sentences cited by M. Raynouard, 'Si aliquas causas adversus istud monasterium ortas fuerint:' 'ipsas monachas vel earum abbate (for abbatem) debeant possidere: 'so a charter of 761 A.D. begins thus: 'Regnante domno Desiderio et Adelgis viros excellentissimos reges,' and a Lucchese plea of 853 A.D. as follows: 'Dum ap (i. e. ab) celsa potestatem Domni nostri Hludovici magni imperatoris directi fuissent Johannem venerabilem sancte Pisensis ecclesie episcopus, necnon et Adalpertum Marchionem, seu Gausbertum Vassum et ministrum minor ipsius imperialis potestatem, et conjuncti fuissent hic civitate Luca,' etc1.

¹ Muratori, Ant. It. vol. iii. p. 167. See other specimens of this language in Muratori, Diss. 32, vol. ii. p. 1025 E—1048. Muratori argues with considerable force and ingenuity that the language of the notaries was never a spoken language, but was a barbarous jargon made in imitation of the old Latin, by illiterate scribes: he says justly that there is no dialect spoken by any class of persons, which does

The ancient system of cases being thus completely confounded, we need not be surprised to find that in the Italian and Spanish languages the nouns were formed, not from the nominative, but from some inflected case of the Latin word. In nouns of the first and second declension this fact cannot be perceived, as the Italian and Spanish musa and muro might come from either the nominative, accusative, or ablative cases of the Latin musa and murus. The nouns of the third declension which increase in the genitive case, furnish a criterion for ascertaining this fact: and from the following table it will be seen that not only the Italian and Spanish, but also the Provençal and French nouns, take the increment of the genitive, and consequently are not derived from the Latin nominative.

not observe some rules of grammar. This is undoubtedly true: a language without a grammar is not a language; unless there were some rules settled by general usage, people could not understand one another. But this does not appear to be precisely the case with the Latin of the notaries: although there is often a confusion both of number, gender, and tense, yet the chief confusion is that of the cases or inflexions of nouns and participles. The most probable explanation of this matter seems to be that the Latin of the early Italian deeds is the tradition of the corrupted language caused by the influence of the German on the Latin: that although the people in the eighth and ninth centuries may have spoken a language like the Italian, yet the Latin was not yet considered a dead language to be learned from books, and that the notaries who could not use the vulgar dialect, wrote in the jargon which they received by oral communication from those who spoke the bastard Latin which had sprung from the invasion. The verses which are cited in the text moreover exhibit the very same character of style as the legal instruments; and to them Muratori's remark with respect to the notaries does not apply: for they must have been written in a language intelligible to the public. examples of the accusative swallowing up the other inflected cases in low Latin are given by Diez. Romanische Grammatik, vol. ii. p. 10-14.]

	Làtin.	Italian.	Spanish.	Provençal.	French.

These examples prove incontestably that the Italian and Spanish nouns are not formed from the Latin nominative; it now remains to ascertain from which of the remaining cases they were formed. The Provençal nouns above cited might have been formed from either of the oblique cases by simply rejecting the termination, thus duc or nazion might have been equally formed from duc-is, duc-i, duc-em, or duc-e, nation-is, nation-i, nation-em, or nation-e, by simply omitting the termination is, i, em, or e; any one of which might be supported by examples. Many of the Spanish terminations, as luz, lid, margen, ley, are of the same nature: others, however, end with a vowel, which is universally the case with the Italian nouns. On comparing these vowel terminations with the Latin cases, it will appear that there is little resemblance between the terminations of the modern nouns and those of the Latin genitive and dative cases: and that the forms in question are evidently derived from either the accusative or the ablative. Of these two cases the preference might seem due to the ablative, as it accounts for most of the forms, derived both from the second and third declensions of Latin nouns: thus modus, abl. modo. modo Ital. and Span.; lignum, abl. ligno, legno, Ital., leno Span.; limes, abl. limite, limite Ital. and Span. These, and nearly all other instances of Italian words derived from Latin nouns of the second and third declensions, exhibit the precise form of the Latin ablative1:

¹ Galvani, Osserv. sulla Poesia dei Trovatori, p. 515 n., considers the Latin ablative as the type of the Italian nouns: 'Dal sesto caso dei nomi (he says) si formano quasi tutti i nomi volgari.' The same is also the opinion of Diefenbach, Ueber die Romanischen Schriftsprachen, p. 119. Schlegel, Observ., p. 38, says that 'il est incontestable que

and the Spanish for the most part, though often without the final vowel. Nevertheless, it seems to me certain that the Italian and Spanish nouns were formed not from the ablative, but from the accusative case, as I shall now attempt to show.

In the first place, it may be observed that the nominative and accusative are more easily confounded than the nominative and the other cases; as the accusative merely signifies the government of a verb or preposition, without those additional meanings expressed by the genitive, dative, and ablative. It is natural that the termi-

dans l'italien la plupart des mots sont formés de l'ablatif latin.' Maffei does not decide between the ablative and the accusative: 'Siccome non era possibile (he says) che la gente idiota senza studio di grammatica regolarmente secondo la varia esigenza dei verbi usasse le inflessioni dei nomi, e dovea quasi sempre valersi dell' accusativo, o dell' ablativo, così da quei due casi venne l'Italico.' Verona Illustrata, P. I. c. 316. M. Raynouard remarks, vol. i., p. 38. 'Une observation me semble décisive pour nous convaincre que les noms romans ont été formés du nominatif et principalement de l'accusatif des Latins. Par ce système toutes les difficultés s'expliquent, tandis que les autres cas, tels que le génitif et l'ablatif, n'offrent pas le même avantage.' Diez, Poesie der Troubadours, p. 294, shows briefly, but convincingly, that the Italian nouns were formed from the accusative, and not from the ablative of the Latin. Sismondi, Litt. du Midi, vol. i., p. 15, has the following remarks on this subject: 'Elle (la grammaire) n'a dans aucune des langues du midi conservé les cas dans les noms; mais choisissant entre les terminaisons diverses du mot latin, elle a fait le mot nouveau avec le nominatif en italien, avec l'accusatif en espagnol, avec une contraction qui s'éloigne de tous deux en français.' He then adds in a note: 'cette régle doit s'entendre surtout du pluriel.' It will, however, be shown below, that the formation of the plural is governed by different principles from the formation of the singular noun. Burguy, Grammaire de la Langue d'Oil, vol. i., p. 22, thinks that the Romance nouns were formed, not from any determinate case of the Latin noun, but from the root, denuded of any characteristic termination.

nations denoting the subject and object of a verb should be confounded, especially by ignorant or unobservant persons. Thus in vulgar English, him says, her says, and them say, are of frequent occurrence; and the use of lui and lei (the modern objective cases) for egli and ella is established in the most correct Italian. The proneness of the Low Latin to the use of the accusative case, where the ancient language would have required the nominative or the ablative, has been already pointed out in numerous instances.

The supposition that the Italian and Spanish nouns and participles were formed from the Latin accusative by rejecting the final consonant, and changing the final u into o, accounts for all the phenomena, with a few exceptions of little importance. The omission of the final m is paralleled by meco, sette, nove, dieci, undici, dodici, cento, amava, Ital.; migo, siete, nueve, diez, once, doce, ciento, amaba, Span.; from mecum, septem, novem, decem, undecim, duodecim, centum, amabam. In the fourteenth century the Latin words pax tecum, Te Deum, regnum tuum, flagellum Dei, gaudeamus, were commonly known in Italy by the corruptions pasteco, tadeo, regnontuo, flagellondeo, galdeamo 1. The elision of the final m in Latin proves that it had a dead sound², which was easily lost: and the interchange of the forms cum and con in ancient Latin (as coneo and coeo for cumeo) prove the close affinity between the sounds of the Latin um

¹ See Perticari, Scrittori del Trecento, l. 1, c. 12.

² What Quintilian calls a mugiens sonus: 'Quid quod pleraque nos illa, quasi mugiente littera cludimus M, qua nullum Græce verbum cadit.' xii. 10, 31. On the elision of the final m in Latin, see Scheller's Latin Grammar, vol. i., p. 12. Engl. Transl.

and on; which last (as will be shown below) was probably the transition between the Latin um and the modern o. The change of the final u into o also occurs in the first persons plural of Italian and Spanish verbs: as fummo, amiamo, temiamo, sentiamo, Ital:; fuimos, amamos, tememos, sentimos, Span. The change of the short Latin u into o in the interior of Italian words, is likewise of frequent occurrence. It is, moreover, a circumstance of some weight as regards this question, that in the Sicilian dialect the masculine termination is not o but u: thus campu, funnu, (fondo,) arcu, argentu, cornu, corpu, capu. It is true that the Sicilian often changes the Latin o into u, as in maggiuri, minuri, inferiuri, funte, from major, minor, inferior, fons: but in many other instances, as in cornu, corpu, just cited, it does not;

¹ Both in Italian and Spanish the Latin u, when long by nature, is with few exceptions retained unchanged: as musa, palude, muro, uno, duro, etc. In Italian, when it was long by position, it is occasionally retained: as ultimo, gusto; but usually changed into o, as sepolcro, polvere, mondo, molto, nozze, mosca, sommo, sotto, giorno, bocca, rotto, colto, etc. The short u was almost invariably changed into o, as popolo, noce, croce, Tivoli, etc.: though in some few cases it was not changed, as numero, furore, subito, due, lupo. The Italian o, formed from the Latin u, is shut like torn, but if not thus changed it is open, like thorn. Hence volto from vultus is not pronounced like volto from volutus. In Spanish the u long by position has sometimes been retained, as mundo, sumo, and sometimes been changed into o, as boca, soto; the short u (except in terminations where it is changed into o, as Dios, Carlos, huebos, amamos, etc.) has usually become ue, as pueblo, nuez; probably, however, the u was first changed into o, and then the o was changed into ue: as bueno, cuello, fuego, fuente, muerte, suerte, etc. came from bonus, collum, focus, fons, mors, sors. In like manner the Italian made nuora from nurus: that is, nurus, nora, nuora, like uovo, nuovo, ruota, buono, fuoco, from ovum, novus, rota, bonus, focus, etc. Compare Diez, Rom. Gramm., vol. i., p. 152.

and it seems that in Italian u has more frequently passed into o than the converse¹.

The supposition that the Italian and Spanish nouns were derived from the Latin ablative, does not account for many of the forms.

- 1. Although the derivation from the ablative explains such words as popolo, collo, Ital.; pueblo, cuello, Span.; from populo, collo; it does not explain such words as mano, canto, Ital. and Span., from manu, cantu: whereas the other hypothesis equally well explains mano from manum, as populo and pueblo from populum. It is true that mano might come from manu, as well as gielo and yelo from gelu: but the very object of the derivation from the ablative is to obtain the o, without having recourse to the supposition of a change of letters.
- 2. Where the Latin nominative of a neuter noun increasing in the genitive case ended in a vowel, as poema, idioma, diadema, the termination remained unchanged in the Italian and Spanish; but where the nominative of a masculine or feminine noun increasing in the genitive case ended in a vowel, the increment of the genitive was adopted, as nazione, nacion, imagine, imagen, sermone, sermon, Ital. and Span., from natio, imago, sermo. Now if the modern nouns had been formed from the ablative, poema would have become poemate, as sermo became sermone and sermon, Ital. and Span.: whereas, if they are

¹ See Pasquilino, Vocabolario Siciliano, Palermo, 1785, 4to. The dialect of Corsica likewise makes the final masculine vowel u and not o, see Micali, Storia degli Antichi Popoli Italiani, vol. ii. p. 54, note. On the occurrence of the final u in other modern Italian dialects, see Lanzi, Saggio di Lingua Etrusca, vol. i. p. 342, note, ed. 2.

derived from the accusative, this difference is explained, as neuter did not, like masculine and feminine nouns, take the increment of the genitive in the accusative case.

3. The Latin neuter nouns, indeed, increasing in the genitive case, whatever may be their termination, furnish a test, an instantia crucis, by which to try whether the modern nouns were formed from the ablative or accusative: for if they were formed from the ablative, they ought to exhibit the augmentative syllable of the genitive case; whereas, if they were formed from the accusative, they ought not. Comes made in the accusative and ablative cases comitem and comite, from either of which conte and conde might be formed: but the accusative and ablative of tempus were not tempore and temporem, but tempore and tempus: so that we are enabled to distinguish which of these cases was the type of the modern form. Now from the following table of neuter nouns of the third declension, and their modern derivatives, it will be perceived that the derivatives in no instance assume the augmentative syllable which characterizes the ablative case.

Latin.	Italian.	Spanish.
abdomen	addome	abdomer
acumen	acume	
æramen	rame	alambre
albumen	${f albume}$	
cacumen	cacume	
caput	capo	cabo
carmen	carme

tempus	\mathbf{tempo}	tiempo
velamen	velame	velam e n
vellus	vello	vello
vimen	vime	vimbre
volumen	volume	volumen 4

¹ Flumen occurs in the Vida de S. Domingo, v. 229. Sanchez, Collection de Poesias Castellanas Anteriores al Siglo XV., vol. ii., p. 30.

² The Provençal likewise made *lum* and *nom* from *lumen* and *nomen*, although in masculine and feminine nouns it adopted the increment of the genitive.

³ See Sanchez, ibid., vol. i. Index in huebos and huevos.

⁴ The French has evidently formed its nouns in the same way as

In these words the Italian, in order to avoid a consonant termination, rejects the last letter of the Latin accusative, and where the termination includes u, it changes that vowel into o. In this manner acumen, flumen, become acume, fiume, etc.; as fenomeno, lessico, are formed from phænomenon, lexicon, forse from forsan, amme from amen, in Dante, (Paradiso, xiv. 64:) and latus, sulphur, marmor, caput, become lato, solfo, marmo, capo. The Spanish is less regular, but in no word does it assume the increment of the genitive: like the Italian it changes us and ut into o, (with the exception of the old word huebos from opus); but the termination en it sometimes exhibits entire, as examen, volumen, and sometimes changes it into re, as lumbre, nombre¹. In marmor the Italian rejects the final r, the Spanish softens it into l.

the Italian and Spanish: thus from caput, chap, or chef, from carmen, charme, from corpus, corps, from nomen, nom, from pondus, poids, from stamen, étaim, from tempus, temps: in some of which words the final Latin s is still preserved. From marmor and sulfur it has likewise made marbre and soufre; but in these words the formation from the uninflected case is not so obvious. [For modern Romance nouns, formed with these terminations, see Diez, Rom. Gramm., vol. ii., p. 308—10.]

I The old Spanish said nome, lume, etc. Rayn. Gr. Comp. p. xxxiv. It will be observed, however, that now all words from neuter nouns in en, which have not retained that termination unchanged, end in re; as enxambre, legumbre, etc. There are likewise the forms sangre, hombre, and hambre, from the masc. and fem. sanguis, homo, and fames. This termination has been caused by the easy transition of the liquids into one another, and has originated thus: homine-m, homne, (which form occurs, Sanchez, vol i., p. 396,) homre, hombre; sanguine-m, sangne, (which occurs in the Sacrificio de la Misa 16, Sanchez, vol ii., p. 183,) sangre; lumen, lumne, (by transposition, used in old Spanish, Sanchez, vol i., p. 396,) lumre, lumbre. So in Italian anima, anma, alma, arma, (see Marrini on the Lamento di Cecco, p. 176,) and in Spanish femina, marmor, carcer, arbor, became hembra, marmol, carcil, arbol; in French

In the following words the Italian, and sometimes the Spanish, adds a vowel to the Latin accusative case:

Latin.	Italian.	Spanish.
animal	animale	animal
cor	cuore	cuer
ebur	ebure	
fel	fiele	fiel
fulgur	folgore	
lac	_	leche
mel	miele	miel
nectar	nettare	nectar
08	osso	hueso
sal	sale	sal
tribunal	${f tribunale}$	tribunal
vas	vase or vaso	Vaso

That in these words the final e is euphonic, and is not the e of the Latin ablative, is proved by cuore, cuer, ebure, fiele, and miele, which if they were derived from the ablative would be cuorde, cuerde, ebore, felle, and melle. The Spanish fel, miel, etc., indeed, prove nothing either way, as they might be curtailed from the ablative: but leche is evidently formed from lac with an euphonic vowel,

ordine-m became ordre, pampinus pampre, altare first alter, (Gr. Comp. p. 35,) then auter, then autel; in Provençal femina has become frema, i. e. femna, frema, frema. The b in lumbre, hombre, etc. is inserted on account of the difficulty of pronouncing a liquid following m: as in hombro, Span. from humerus; comble, chambre, humble, and nombre, French, from cumulus, camera, humilis, and numerus: in Greek γάμβρος (for γάμερος) from γάμος, παρμέμβλωκε for παρμελόλωκε, μεσήμβρινος for μεσημέρινος, ήμβροτον for ήμορτον (i. e. ήμορτον, ήμροτον, ήμβροτον) etc. So in English ramble and tumble correspond to rammeln German, and taumeln German, tommelen Dutch: Hamblet for Hamlet, Hambleton for Hamilton: solemn and damned were formerly written solempne and dampned: 'fimble hemp' for 'female hemp' occurs in Tusser, c. 45, § 8, etc.

since if it came from the ablative it would be *lette*, like the Italian *latte*. That the final e is here only euphonic, and was added in order to avoid the consonant termination, is also shown by the circumstance that when the neuter noun ended in a, the form of the Latin nominative or accusative was preserved without alteration, as in the following words:

Latin.	Italian.	Spanish.
ænigma	enimma	enigma
anathema	anatema	anatema
axioma	assioma	axioma
baptisma.	battesmo ¹	bautismo
chrisma	cresima and -esimo	crisma
clima	clima	clima
diadema	diadema ·	diadema
diploma	diploma	diploma
dogma	domma	dogma
drama	dramma	drama
epigramma	epigramma	epigrama
idioma	idioma	idioma
problema	problema.	problema
psalma	salmo	salmo
sagma	salma	salma
sophisma	solfisma <i>or</i> -mo	sofisma
spasma	spasimo	espasmo
systema.	sistema	sistema
thema	tema	tema
theorema	teorema	teorema

That in these words (which passed into the Latin from the Greek) the inflexion of the genitive case was not forgotten, and that they would have been anatemate, idiomate, etc., if the Latin accusative had been anathematem, idiomatem, appears from the Italian form stimati,

¹ The reason of the change of the final a into o in neuter nouns is explained below under the head of the genders, ch. II. § 3.

from the plural *stigmata*. In the words of most frequent use, the final a has been changed into o, on account of the gender.

There are a few words in which the Italian form exhibits the increment of the Latin neuter noun: as numine, esamine, crimine, where nume, esame, crime, are the more common forms¹; vimine also occurs, as well as vime, the form used by Dante. But in the words fulmine, genere, latte, and pettine, there is no variation: in the latter word, the preference of the genitive form seems to have been due to a desire of avoiding a confusion with petto from pectus. Estiercol, Spanish, is derived from some inflected case of stercus.

The Italian appears at first sight to offer some instances of the formation of nouns from the Latin nominatives of the third declension, as uomo, ladro, margo, imago: but it is evident that these are modern forms which have undergone different modifications, and that the original words were homine, or uomine, ladrone, margine, imagine². The Italian, however, sometimes

¹ Also ulcero from ulcus, where ulcera (from the plural) is the more common form: on the origin of ulcera see below, ch. II. § 3.

² The original form of uomo was probably homine, regularly formed from hominem. This form is still extant in the plural uomini, anciently homini. It then became omin or omen, a form preserved in the Milanese dialect. Omen was then shortened into ome, by the rejection of the final n, like volume from volumen, etc. above p. 70,) and ome became omo or uomo, as in many other words where the termination vacillates between e and o. Thus cespite and gurgite were first contracted into cespe and gurge, (which last occurs in Dante,) and then changed into cespo and gorgo. (See Castelvetro on Bembo, vol. ii. p. 18.) The same explanation applies to margo and imago: which originally were doubtless margine and imagine (the common forms,) contracted into image (which occurs in Dante,) and marge, and then the terminations were confounded. The word ladro shortened from

preserved the Latin nominative in proper names, as *Peleus* in the early writers, *Feton*, *Semiramis*, *Minos*, in Dante¹: in some names likewise there are two forms, one from the nominative, and the other from the accusative: as *Plato*, *Platone*, *Cato*, *Catone*, *Pluto*, *Plutone*. The Spanish presents several instances of the Latin nominative in proper names; as *Jupiter*, *Palas*, *Apolo*, *Fenix*, *Carlos*, etc.: and has also retained it in the single word *dios*³. But with these exceptions there is not (as far as I am aware) in either language any noun or participle which has retained the termination of the Latin nominative.

It may therefore, I conceive, be laid down as the general result of the above remarks, that Italian and

ladrone, (ladrone, ladron, ladro,) furnishes another instance of the rejection of the final n. Words in constant use like uomine, were most liable to contraction: thus mulierem has now become moglie, though the form mogliere occurs in ancient writers; and sanguine has been contracted into sangue: the Spanish still has sangre, (see above, note, p. 71.) See Schlegel, p. 36: 'Ces mots, qui reviennent sans cesse dans le langage populaire, ressemblent à la petite monnoie d'argent: elle perd son empreinte à force de passer d'une main à l'autre, tandis que les gros écus la conservent.'

- 1 See Perticari, Difesa di Dante, c. 13.
- ³ See Castelvetro on Bembo, vol. ii. p. 17.
- Whence it has formed the fem. diosa, a goddess. Coms from comes in Provençal, (conte Ital., conde Span., comte French,) affords an instance of the preservation of the Latin nominative in a masculine noun of the third declension. In the Poeme sur Boece, v. 34. Coms fo de Roma, and v. 138—40. Molt fort blasmava Boecis sos amigs, Qui lui laudaven dereer euz dias antix, Qu'el era coms, molt onraz e rix: Raynouard in both places translates consul. Perhaps count (comes) is the word meant. The French has likewise retained the ancient form of the nominative in some proper names, as Charles, Hugues, (instead of Challon, Hugon, which were the ancient accusative,) though it now has universally adopted the form of the Latin accusative.

Spanish nouns and participles are formed from the Latin accusative: sometimes retaining it unaltered, as poema, diadema, Ital. and Span.; semen, volumen, Span.; sometimes by rejecting the final consonant, as musa, limite, amante, gente, nume, fiume, marmo; sometimes by rejecting the final consonant and changing u into o, as modo, amato, mano, solfo, capo, corpo, cabo, cuerpo: and the Spanish sometimes by rejecting the final syllable, as imagen, trinidad, luz¹.

On comparing this system of forming nouns and participles from the Latin with that prevalent in the other Romance languages, it will appear that there was an important and fundamental difference between the method adopted by the Italian and Spanish on the one hand, and the Provençal and French on the other. It has been shown above that the Provençal and French nouns adopt the increment of the Latin genitive², and so far all the four languages agree. The Provençal, however, in forming its nouns and participles from Latin forms in us, sometimes preserved the termination of the Latin nominative entire, as us, (for uns,) mieus, Deus, or where us was preceded by a consonant, it omitted the u and preserved the s, as philosophs, bels, amics, fers, amatz, from

¹ Speme in Italian is evidently spem, the accusative of spes, as ren in Provençal (like rien in French) is the accusative of res, both which forms occur. This explanation accounts for the double form speme and spene, since the final m was in Italian (as has been already shown) often changed into n. Aria likewise, as will be explained below, comes from aëra: as also lampara Span., from lampada; (on the change of d and r, as in fedire for ferire, rado for raro, Ital. see Muratori, Ant. It. vol. ii. p. 532, A. vol. iii. p. 1090, A.: so in English paddock is parrock, (parruc, A. S.) whence park is contracted: see Archaelogia, vol. viii. p. 138.) [See Diez, Rom. Gr. vol. i. p. 219.]

3 Above, p. 62.

philosophus, bellus, amicus, ferus, amatus. By analogy this termination was then transferred to all nominatives, even to those which were not terminated with s in Latin, as amors, talens, valors, to comparatives, as maiers, mielhers, and even to infinitives used substantively, as sabers, plazers. This analogy was not, however, extended to Latin substantives in a, to the definite article, or to personal pronouns.

Pursuing this system of imitating the terminations of the Latin cases, the Provençal rejected the final s from its accusative singular, the only oblique case which is preserved from the Latin: and in the plural number formed the nominative without, and the accusative with the s. The following example, therefore, may serve as a general type for the declension of Provençal nouns and participles, and at the same time by the comparison with the Latin show the reason of the changes.

Singular.		PLURAL.		
	Lat.	Prov.	Lat.	Prov.
Nom.	amicus	amics	amici	amic
Acc.	amicum	amic	amicos	amics1

The Provençal has moreover a declension of proper names founded on the same principles, and in which the traces of the Latin are more distinctly visible. These nouns sometimes made the nominative sing, in

¹ These are traces of the rule with regard to the final s not applying to nouns where it was not present in Latin: thus paire, maire, hom, from pater, mater, homo, sometimes have the s and sometimes have it not. Thus el drax, nominative plural, i. e. eli dracs, (dracones,) Gr. R. p. 109; whereas lo drac, nominative singular, p. 141 (draco): according to the rule these forms ought to be just reversed: but from the same translation of the Apocalypse in which these forms occur, Johans, nominative singular, i. e. Johannes, p. 141. See Diez, Poesis der Troubadours, p. 296.

s or es, and the accusative in on, the final n of which might be omitted, when the Provençal accusative became the same as the Italian and Spanish form. Thus we find, nom. Aimes, Hugues, Odiels; acc. Aimon or Aimo, Ugon, Odilo, (Gr. Comp. p. 85, 86.) This declension has probably preserved the intermediate steps between the Latin and the common Provençal form: viz. campus, campes, camps: campum, campon, campo, campe, camp.

The declension of the nouns is further illustrated by a comparison of the Latin and Provencel possessive pronouns, (Gr. R. p. 96—114.)

With all classes of nouns except those ending in a, and another kind to be mentioned below, the Provençal exactly imitated the Latin declension in us, in making the nominative singular, and the accusative plural in s, and the nominative plural and the accusative singular without s. With those ending in a, however, it preserved the Latin nominative singular unchanged, but formed the plural of all cases after the Latin accusative, as musas, domnas, mias, etc.

In the declension of its adjectives the Provençal observes the same rules, founded on the same reasons.

Thus bons, good, is declined as follows:

SINGULAR.			PLURAL.		
Nom. Acc.	bons or bos bon	bona bona	bon bons	bonas bonas Gr. R. p. 42.	

Past participles of verbs are declined in the same manner: thus

Singular.			Plural.		
Nom. Acc.	amatz amat	amata amata	amat amatz	amadas amadas Gr. R. p. 200.	

Some adjectives, however, are common to both genders, and these in the singular number omit the s in the accusative case, but in the plural preserve it for both the cases. *Grans*, great, will furnish an example of this declension.

SING	ULAR.	PLURAL		
		~		
Nom.	grans	grans		
Acc.	gran	•		

The reason of this difference is obvious, viz. that whereas the Latin adjectives which took a feminine termination, ending in us, made i in the nominative plural; those which did not take a feminine termination ending in ens, ans, is, etc. made es in the nominative plural, though they made em in the accusative singular: consequently the Provençal, after the model of the Latin adjective, omitted the s in the accusative singular, but preserved it in the nominative plural.

The present participles of verbs active were declined on the same principle, only they showed in the accusative case the letter of the increased genitive: as

SINGULAR.	PLURAL.
Nom. amans Acc. amant	amans or ana for amants

Gr. R. p. 197.

The acc. singular is often written without the final t, as the Provençal used mon for mond from mundus, and generally omitted the final d or t after n: thus chant, the first person of the present indic. of chantar, became chan, atend from atendre became aten, sent from sentir became sen, etc. (Gr. R. p. 209.)

In old French the same system of declension is observed, as M. Raynouard has shown by a multitude of examples, which prove beyond a doubt the retention in that language of the same two Latin cases. Thus in the nom. singular, 'Qui ere amirals des galies:' 'Johans li rois de Blaquie venoit;' 'Nus n'est joyeux com Thiebauz,' (i. e. Thiebauds, Theobaldus); 'Que ce fut la flors

des barons¹.' In the acc. singular, 'del plus bas enfern;'
'Ested e ivern tu as fait.' Nom. plural, 'Celui cui li
Franc avoient chacié de Constantinople;' 'tout mi
penser sont à ma douce amie;' 'dont li nom ne sont mie
en escrit.' Acc. plural, 'Li rois mande ses arcevesques,
Ses meillors clercs et ses evesques;' 'sur les chevels de
mun chief;' 'Sire Deus de vertuz,' (i. e. vertutz.) Gr.
Comp. p. 71—84.

The old French likewise, as well as the Provençal, extended this inflexion to the infinitives of verbs, when used as substantives: thus in the nom. singular, 'Si la blonde savoit Com li *departirs* m'ocira:' but in the acc. singular, 'mainte larme i fu plorée de pitié al *departir* de lors pays.' (*Gr. Comp.* p. 96.)

The same inflexion of proper names as that above pointed out in the Provençal also occurs in the old French: thus Hues, Pieres, Bueves are nom. Huon, Pieron, Buevon, are acc. (Gr. Comp. p. 86, 87.)² Many traces of this ancient form of the accusative still appear in the modern French proper names; thus Hugon, Pierron, or Perron, Odilon, Guyon, (from Guy,) Guillon, (from Guille for Guillaume,) Giraudon, (from Giraud,) Girardon,

In modern French the words fils, (from filius) fonds, (from fundus,) lacs, (from laqueus,) tiers, (from tertius,) and Artus, (from Arturs,) for Arthur, are remnants of this ancient form: also corps, poids, temps, (see above, p. 70, note 4) choux, (from caulis,) puits, (from puteus,) and proper names, such as Charles, Hugues, Jules, Georges, Jacques, Louis, Villars or Villiers, (from Villarius,) Londres, (from London, like Havre, from the German hafen.) Anciently the final s in these words was doubtlessly sounded, and fils nom. was distinguished from fil acc., to the ear as well as the eye.

² On the inflexions of the ancient French nouns, see also Raynouard, Journal des Savans, 1826, p. 297, 298; 1828, p. 136, 137. Observations sur le Roman de Rou, p. 48—58.

(from Girard,) Morelon or Morlon, (from Morel,) Philippon, (from Philippe,) Vernon, (from Verne,) etc.¹

It is unnecessary to repeat any of M. Raynouard's instances of the declension of French adjectives, as it is a mere repetition of the declension of the substantives, (Gr. Comp. p. 129—36.)

The French also anciently used mes, tes, ses, formed from mos, tos, sos, in the nom. singular, and mon, ton, son, in the acc. singular: thus 'je suis ses fils, il est mes pere.' Nostres and vostres were likewise used as nom. singular, as 'sacès que nostres sires m'a pardonnez mes pechiez.' The latter forms have, however, been supplanted by the acc. nostre or nôtre, vostre or vôtre, and the former by the acc. mon, ton, son. (Gr. Comp. p. 162—170.)

The Provencel had a peculiar exception to the general rule with regard to the final s, for substantives ending in aire, eire, ire, which made the acc. singular, and the nom. and acc. plural, in ador, edor, and idor. Thus trobaire, cantaire, amaire, entendeire, servire, were nom. singular; but in the acc. singular, trobador, cantador, amador, entendedor, servidor, and in both cases of the plural, trobadors, cantadors, amadors, entendedors, servidors. (Gr. R. p. 33—5.) The reason of this singular declension is that these words, or the words from which the analogy was derived, were formed from Latin nouns in ātor, itor, and itor; and in such words as amātŏr, domitor, audītōr, in the nom. singular, the last syllable being short, the o was easily slurred over, and ator, itor, and

¹ [For a copious illustration of this subject, see Burguy, Gr. de la Langue d'Oil, vol. i. p. 63—98; Ampère, Hist. de la Litt. Franz, p. 48—89.]

itor, contracted into aire, eire, and ire; but in all the other cases, singular and plural, amatōrem, amatōres, domitōrem, domitōres, etc.; the or being long, it had a stronger hold on the tongue, and only the last syllable, according to the constant practice of the Provençal language, was omitted. In like manner the Italian has formed lepre from lepōrem, eliminating the short o, but has preserved the long o in lepore from lepōrem. The following scheme, therefore, explains this declension.

Singular.		PLURAL.			
	Lat.	Prov.	Lat.	Prov.	
Nom.	amatŏr	amaire	amatōres	amadors	
Acc.	amator-em	amador	*		

An analogous change may be observed in those Provençal comparatives which have been derived from the Latin. These form the nom. singular in ers, the acc. singular and nom. plural in or, and the acc. plural in ors. The reason of this change is, that in the nom. singular the final or, being short in Latin, lost its full sound of o, and became er; then, according to the analogy above explained, it took the final s in the nom. singular: but in the augmented cases the or being long, the vowel was not changed into the thinner sound of e^1 .

This remarkable declension of nouns in aire, reappears in the old French: which in the substantives corresponding to the Latin nouns in ator and itor made the nom. singular in eres, erres, and ieres², but the other three

¹ So it may be observed in the declension of proper names, the Provençal changed the final us of the nom. into es, because it was short, but changed the final um of the acc. into on, because it was long.

² None of the Provençal examples cited by M. Raynouard, Gr. R.

cases in eor or or. Thus nom. singular. 'Diex tu ies rois et conseilleres, et gouvernieres, et jugieres.' 'Couronés empereres i fu.' Acc. singular, 'il deguerpit Deu sun faitor.' Nom. plural, 'Vous estes dui enchanteor, et li nostre enemi sunt jugeor.' Acc. plural, 'Que il est dieu des jongleors, et dieu de tous les chanteors.' The modern French has formed these nouns from the ancient termination, not of the nominative, but of the accusative singular: thus from empereor, chanteor, came emperor, chanter, changed first into emperour, chantour, then into empereur, chanteur. The word troubadour, from trobador, has never undergone the last change and become troubadeur. The modern Provencal on the other hand has formed all these nouns in aire from the termination of the nominative, as chantaire, triounfaire, troumpaire, etc.; but like the French it has lost the inflexion.

Of the distinction between the cases of comparatives derived from the Latin, there appears to be no trace in any Romance language except the Provençal. (*Gr. Comp.* p. 138.)

Now when we come to compare the system of formation and declension which has been just described, with

p. 33, take the final s after aire; the French nouns, however, take it invariably. Gr. Comp. p. 87—94.

¹ This series of changes may be observed in many other French words, thus illorum, lor, lour, leur; morir, mourir, meurs; probus, proux (whence provesse,) preux, etc.: also in the substantives derived from Latin nouns in or, as honor, honour, honneur, etc., (see below § 3.) Some of these preserved the ancient termination unchanged, as amour, labour; in others it can be perceived in their derivatives, as vigoureux, douloureux, rigoureux, savoureux, etc.: valeureux has been formed after the termination eur came into use. Soporeux and liquoreux have preserved the Latin form in or. Nous from nos, vous from vos, bouche from boca, (bucca, Lat.) mouvoir from mover, vouloir from voler, are

that which prevails in the Italian and Spanish, we shall find the strongest and most marked dissimilarity.

- 1. In the first place there is no trace in the Italian and Spanish languages of any distinction of cases: whereas the Provençal distinguished between the nominative and accusative, both in the singular and plural, by at least four different manners: viz. the retention or omission of s, the change of es and on, of aire and ador, and of ers and or. Three of these methods of distinguishing cases likewise appear in the old French.
- 2. The Provençal in all nouns and participles derived from Latin nouns and participles in us, formed its derivative from the nominative by omitting the last but one, and preserving the last letter, as amic-u-s, amics; amatu-s, amatz: the Italian and Spanish, on the other hand, formed their derivative from the accusative by preserving the last but one, and omitting the last letter; thus amicu-m, amico, amatu-m, amato¹.

instances of the change of o into ou; le from lo, les from los, ce from ço, of the change of o into e. [Compare Diez, Rom. Gramm. vol. i. p. 147.]

¹ M. Raynouard, having shown that the Italian formerly used meo for mio, goes on to say that 'the Romance (i. e. Provençal) pronoun mon was adopted and still exists in Monsignor. This remarkable vestige is a fresh proof of the ancient community of language.' Gr. Comp. p. 164. This vestige, which is certainly remarkable, proves no more than this: that the Italian, as well as the Provençal, corrupted the Latin meum into mon: the Provençal used it as an acc. case; in Italian it was the only case. Afterwards mon became mo, as in the ancient expressions fratelmo, patremo, cuginomo: see Menage Etym. Ital. in cuginomo. If M. Raynouard can show that the Italian, like the Provençal, used meus and mos in the nom. case, he will then indeed have gone far to prove a community of language. It is not improbable that in Italian, as it appears to have been the case in Provençal, (see above, p. 78,) the transition of um into o took place in this manner:

M. Raynouard himself, speaking of the strong resemblance which the Catalonian and Vaudois languages bear to the Provençal, remarks that their chief difference consists in their wanting the fundamental rule with regard to the final s. He then adds: 'it appears that this rule has never been able to cross either the Pyrenees or the Alps.' (Gr. Comp. p. xxxix.) By these words, M. Raynouard, if I rightly understand him, means to say, that the rules for the formation and declension of nouns and participles were originally different in the Provençal and French on the one hand, and in the languages spoken in Italy and Spain on the other. If this be so, his theory of the universality of the Provençal language must, according to his own admission, be considerably circumscribed.

It might, indeed, be argued, that as the Provençal and French, although they adopted as their type the accusative of Latin nouns increasing in the genitive case, yet retained the s of the nominative case of nouns and participles in us; so the Italian and Spanish, though they formed from nouns and participles increasing in the genitive, by taking the accusative case, yet formed from nouns and participles in us, by taking not the accusative but the nominative, with the rejection of the final s, which, we know, was often suppressed in Latin before a consonant¹: thus mondo, buono, amato, would come from mundu', bonu', amatu': and in some Italian dialects the final yowel is still u and not o².

viz. um, om, on, o; amicum, amicom, amicon, amico. The suppression of the final n is very frequent in the Provençal. Gr. R. p. 346. Gr. Comp. p. 163. So likewise in Italian con il and non il are contracted into col and nol, in German von dem into vom.

¹ See Lanzi, Lingua Etrusca, vol. i. p. 91. See above, p. 68.

This hypothesis, however, would not account for such forms as tenero, succero, genero, ministro, maestro, Ital. tierno, suegro, yerno, ministro, maestro, Span., etc., the originals of which have not u in the nominative case. We are, therefore, compelled to suppose that the Latin accusative was the universal type for the Italian and Spanish nouns. We know, likewise, from the Provençal and French form of the nominative case, that the final s had not been in the corrupt period of Latinity, dropped from the terminations of nouns even in conversation; although it was frequently elided before a consonant by the early Latin poets.

- 3. In forming the plurals of masculine nouns, the Provençal and Italian so far agree, that both follow the Latin nominative case in i: the Provencal rejecting, the Italian retaining, the final vowel. The Spanish, however, forms its masculine plural after the model of the Latin accusative, not of the Latin nominative, by adding s: thus the Italian and Provençal have amici and amic. like the Latin amici, the Spanish amigos like amicos: desiderj, pensamenti, Ital. desir, pensamen, Prov., but deseos, pensamientos, Span. The Spanish forms its masculine plurals simply by adding s, from the analogy of the acc. plur. of Latin nouns in us, while the Italian forms its masc. plur. in i, from the analogy of the nom. plur. of nouns in us. Thus the Italian says indifferently. modi, mani, onori, poemi; the Spanish modos, manos. onores, poemas.
- 4. In forming the plurals fem. of nouns and participles in a, the Provençal and Spanish agree in following the Latin accusative, and in simply adding s: thus domnas, bonas, amatas, Prov., dueñas, buenas, amadas, Span. Here,

however, the Italian disagrees, as it forms the plural in these instances from the Latin nom. in α , which, not having any diphthongs, it changes into e; thus donne, buone, amate, nuptive, nozze.

The characteristic varieties of the several Romance languages in forming their masculine and feminine nouns from Latin nouns in us and a, are shown by the following scheme, which at the same time proves that each language derived its terminations directly from the Latin, and independently of any of its cognate languages.

 .	Lat.	Italian.	Spanish.	Prov. cavals	French. chevals
Sing.	caballus caballum	cavallo	caballo	caval	cheval ·
	caballi caballos	cavalli		caval	cheval
P1.			caballos	cavals	chevals
Sim a	f musa musam			\mathbf{musa}	muse (musa)
		musa	musa		
701	∫ musæ } musas	muse			
1 6.	{ musas		musas	musas	muses (musas)

It has been shown that the Italian and Spanish nouns were formed from the Latin acc. singular: and that the Provençal and French nouns also took the increment of the genitive case; the same languages (as is shown in the above table) also formed the plural of feminine nouns in a from the Latin accus., and the Spanish formed the plural of all nouns from the accusative. The same tendency to employ the accusative as a nominative case is also visible in the progress of the Provençal and French languages; and, when the distinction of cases was gradually given up, led to the disuse of the nominative, and the retention of the accusative form in each number. Thus in both those languages, the singular number of

nouns ending with a consonant is now marked by the absence of a final s, and the plural by its addition: which is the rule observed in the ancient accusative cases of nouns, but in the nominative cases the rule was just reversed. The gradual progress of this change can be observed in the remains of the early Provencal literature, in which the distinction between the nom. and acc. is by no means constantly observed; and in almost every instance it may be seen that the disposition is to use the accusative and not the nominative as the invariable form. In general, the observation of the distinction of cases is in proportion to the antiquity of the writing: thus in the Poeme sur Boece, the earliest work in the Romance languages now extant, the rule as to the final s is constantly observed; in the Nobla Leyczon it is almost constantly neglected in the singular number. The same progress is also discernible in other parts of speech; thus mon, ton, son, nostre and vostre, sometimes occur as nominatives singular, and mos, tos, sos, as nominatives plural, although for the most part they are only accusatives: but this licence (as M. Raynouard states) rarely occurs in the compositions taken from the best and most ancient monuments (Gr. R. p. 116). It is not improbable that a similar change took place in the formation of the plural of Provençal nouns in a; and that at a very early period of that language, prior to the date of any remains of it which we possess, muse was the nom., and musas only the acc. case; so that there were two cases in the fem. as in the masc. plural. This proneness to abandon the nom. and employ only the acc. case, however prevailing, was not invariable; thus it has been already shown that, although the modern French forms, empereur, chanteur.

etc. have been formed from the ancient acc. empereor, chanteer, and not from the ancient nom. empereres, chanteres, yet the modern Provencal forms chantaire, triounfaire, etc. have followed the analogy of the ancient nominatives cantaire, amaire, and not of the ancient acc. cantador, amador1. The Italian, moreover, although it completely deserted the traces of the Latin nominatives in the singular number, still retains their terminations unchanged in the plural. However it cannot be doubted that on the whole the Romance languages show a decided tendency to the accusative in preference to the nominative case; a tendency, likewise, pointed out above in some specimens of the Latin of the middle ages2: and it seems to me that this disposition affords a better explanation of the forms of the modern nouns than the remark of Schlegel that the oblique cases served as a type. because taken together they were more numerous, and therefore occurred oftener than the nominatives. cases except the nom. and acc. appear to have become obsolete at a very early period after the German invasion: and therefore this remark does not explain why, when only those two cases remained, the preference should, in almost every instance, have been given to that case which seems to have the less obvious claim. But although the existence of a disposition to abandon the subjective and

¹ See above, p. 84. ² See above, p. 58—61.

^{3 &#}x27;Toutes les langues dérivées du Latin ont donné la préférence à un cas oblique quelconque. Et pourquoi? parce que tous les cas obliques pris ensemble étant d'un usage plus fréquent que le nominatif, la forme du substantif commune à tous ces cas s'étoit mieux imprimée dans la mémoire de ceux qui ne savoient pas le latin d'une manière savante.' Observ. p. 38. The same explanation is also given by Diefenbach, p. 119.

use the objective case as the invariable form, appears to me to be convincingly proved by a wide induction¹, I am unable to suggest any very satisfactory explanation of the causes which induced the mind to make this preference.

In explaining the formation of the Italian nouns from the acc. case, I had occasion to remark that when the final syllable was um or us, the last letter was rejected, and u became o; that where it was em, the last letter was rejected and the e retained. According to this hypothesis, there could be nothing arbitrary in the final vowel of the Italian nouns, and the harshness of a consonant termination was avoided, not by adding a vowel

It may be observed that foreigners, in attempting to speak a language which they do not understand, almost always use the accusative as the nominative of the pronoun in speaking of themselves: e. g. moi in French, and me in English. The accusative seems to be more emphatic than the nominative, and to be preferred to it on that account: thus in French, where a stress is laid on the pronoun, the accusative case is invariably used: as c'est moi, c'est toi, and not c'est je, c'est tu; which the strict rule of syntax would require. Thus when Nisus, in Virgil, wishes to direct instant attention to himself, he exclaims,

Me, me, adsum qui feci, in me convertite ferrum O Rutuli, mea fraus omnis. etc.

The West Indian negroes have made the same change in the pronouns, in their corruption of the English language: thus in a song written in the negro dialect of Jamaica,

Peter, Peter, was a black boy; Peter him pull foot one day: Buckra girl, him Peter's joy; Lilly white girl entice him away.

(Journal of a West India Proprietor, by M. G. Lewis, p. 120). 'The negroes (the author of this song adds in a note) never distinguished between "him" and "her" in their conversation.' They have therefore not only abolished the distinction between the two cases by making the accusative serve for both, but they have also abolished the distinction between the two genders, by making the masculine serve for both.

after a consonant, but by suppressing a consonant after a vowel. M. Raynouard, however, takes an entirely different view of this subject. Conceiving that the Italian was derived from the Provencal, he represents the Italian nouns and participles as having been first reduced to the Provencal form, and then being augmented with a vowel. for the sake of euphony, in order to avoid a consonant termination. Hence he considers such words as large. porco, tardo, campo, carne, altare, toro, falso, furto, parte, as formed by the addition of the euphonic e or o, from the ancient forms larg, porc, tard, camp, carn, altar, tor, fals, furt, part: he even goes further, and supposes that the ancient e has sometimes been changed into o: thus the original forms diable, secle, sepulcre, nostre, vostre, clerque, evesque, were, according to him, changed in Italian into diavolo, secolo, sepolcro, nostro, vostro, cherico, vescovo. In support of this assertion he cites the authority of Giambullari, a Florentine writer of the sixteenth century, who states that in ancient times most of the Florentine words ended with consonants, and that the Florentines, seeing the softness of the vowel terminations of the Sicilians, adopted the Sicilian rule. This ancient usage, he thinks, is preserved in many of the Italian dialects, which reject the final vowels, and have the same consonant terminations as in the corresponding words of the Provençal: and a remnant is retained by the written Italian, in the power of omitting the final vowel of certain words ending with a liquid. He further adds that Boccacio called his great collection of novels Decameron. without the final e, which was not added till afterwards: and that in a poem of Barsape, an early Milanese writer. the final e is never added to substantives in on, and is often wanting after those ending in x, as pax, lux, verax, which are now always pace, luce, verace¹.

To this doctrine I must object, in the first place, that the Provencal nouns were not as M. Raynouard represents them, but largs, porcs, tards, camps, etc., with the final s, the mark of the nominative, which there is no reason to believe ever existed in Italian. Moreover if the Italian nouns originally ended in consonants, and the final vowel was afterwards added for the sake of euphony, how comes it that attention should in almost all cases have been paid to the Latin termination, and that where the Latin accusative ended in um or us, the final vowel was o, where it ended in em or en, the final vowel was e? Is it conceivable that if the Latin terminations had been long cut off and forgotten, we should never (with a very few exceptions) find monde from mundum, or monto from montem? Let us take ten Italian substantives which M. Raynouard has deprived of their terminations in order to exhibit their agreement with the Provencal forms, viz. animal, cardinal, cristal, mal, metal.

¹ See Gr. Comp. p. lx. lv.—vii. and for the consonant terminations of the Italian dialects, p. 397—409. He makes the same supposition with regard to the addition of the euphonic vowel to the Spanish nouns, ib. p. xxxv.

² Sometimes e is used for o, as in stile for stilo from stilus, padrone from patronus, and in the termination iere from arius: (see below, § 4,) sometimes o is used for e, as vimo for vime from vimen, povero from pauper, lavoro from labor, albero from arbor, consolo from consul, subero from suber: sometimes a is used for e, as sirena from siren, duca from dux. Some changes of final vowels produced by the genders will be explained below, § 3. Duolo, which Castelvetro on Bembo, Prose, vol. ii. p. 19, (Naples, 1714,) mentions as an irregular form, is probably not derived from dolor, but from the ancient Teutonic word dol, suffering, preserved in the Scotch dule. See Meidinger in Dulden. The Italian has dolore, regularly formed from dolor.

quintal, sal, senescal, signal, val, (Gr. Comp. p. 33,) and I will ask him to calculate how many million chances to one there are, that a person ignorant of Latin (which we must take to be the condition of his Romance euphonist) does not err in adding to these words their vowel terminations? Nor is this all: but we are called on to believe that where the Provencal had reduced the Latin u to the meagre sound of e, as in diable, secle, etc., the Italian retraced its steps and returned to the fuller vowel. The invariable progress of language is to shorten long forms, and to attenuate full sounds: and we would as willingly believe that the Tiber and Ebro in the middle ages ran up to their sources, as that the languages of Spain and Italy, having once been identical with the Provencal, returned to their present state. It cannot be doubted that when the practice had once been established, that all the Italian words ended with a vowel, the euphonic e and o were sometimes added to consonant terminations, and I have already had and shall hereafter have occasion to point out some instances, such as speme. animale, sono, hanno, etc., where the final vowel is plainly owing to the love of euphony¹: the difference between my opinion and M. Raynouard's is, that what he considers the rule, I consider as the exception, and what he considers as arbitrary, I consider as regulated by fixed principles.

The argument which M. Raynouard founds on the absence of vowel terminations in the dialects of Upper Italy deserves a full investigation, as there can be no doubt that the lower orders and provincial districts com-

¹ See above, p. 72.

monly preserve the ancient language with the greatest fidelity. In most of these dialects the nouns, verbs, participles, prepositions, adverbs, and other parts of speech, have not the vowel terminations which prevail in the written Italian language, but follow the system perceptible in the Provencal and French. Thus they say sacc, vin, bianch, nemic, fuog, bosc, mond, camp, nav, paradis, abiss, sabbat, libertat, argent, digest, sacerdot, nativ, Numerals from five to nine are sinch, ses, sett, ott, etc. nov: participles, present and past, and gerunds, parland, volend, tocat, fatt, miss, mort: first persons of verbs, perd, parl, demand: third persons of verbs, dorm, pend, cognoss: adverbs and prepositions, poc, quand, trop, ades, apress, vers, mezz, inanz, altrament. The examples collected by M. Raynouard (from which the above words are taken) refer only to the dialects of Piedmont, Engaddine in the Tyrol, Milan, Bergamo, Mantua, Friuli, Ferrara, and Bologna. It would require more local knowledge than a foreigner can pretend to possess in order to trace the exact line of demarcation between the Italian dialects which have the vowel terminations, and those which have not; but the following description may probably be considered as an approximation to the truth. The dialects of the Provencal run into Piedmont both on the west and north: in Piedmont, however, an Italian dialect with consonant terminations begins, and it reaches through part of the Grisons, over the districts of Milan, Bergamo, Pavia, Parma, Brescia, Cremona, Mantua, Modena, the Italian vallies of the Tyrol, Friuli, the territory of Treviso, and those of Ferrara and Bologna. In the west and east, it does not extend into the Genoese, Venetian, Vicentine, Paduan, and Veronese territories: and towards

the south the vowel terminations first appear in Tuscany and Romagna. Throughout all the rest of Italy the vowel terminations are as prevalent in the local dialects and in the mouths of the lowest classes, as in the written language¹: and, as far as our knowledge extends. have ever been so: the anonymous history of Roman affairs in the fourteenth century written by a contemporary in the Roman dialecte, and the Chronicle of M. Spinello written in the thirteenth century in the Apulian dialect3 precisely agree in this respect with the language of the present day. M. Raynouard's argument would have great weight, if over the whole of Italy the lower orders used a dialect which wanted the final vowels: in that case it might be said that the ancient language is always most faithfully preserved among uneducated persons, and in mountainous or secluded districts; and that the upper classes, from their love of a harmonious and flowing language, had softened the rough pronunciation of their forefathers. But this is not so: the lower orders of southern Italy and Sicily speak a language which even luxuriates in vowels beyond the written Italian: and although the vowel terminations may have been introduced among the upper ranks of northern Italy, there is no reason to suppose that they were not

¹ For an account of the dialects of Southern Italy see the *Foreign Quarterly Review*, vol. v. p. 158—90. [Compare the work of Biondelli, above, page 44, note ¹.]

² This history (which contains the life of the celebrated Cola di Rienzo) is printed in Muratori, Ant. It. vol. iii. p. 251—548. It is written, according to Muratori, p. 249, 'vulgi Romani dialecto, quæ fortassis a Neapolitana eo tempore parum distabat.' See a passage of it rendered into the Roman of the present day in Perticari, Dif. di D. c. 36.

Murat, Script. Rer. It. vol. viii.

always in use among the rudest peasants in the remotest corners of Tuscany, the states of the Church, of Naples, Calabria, and Sicily. It appears to me that the Italian² must be considered as divided into two principal dialects, one with vowel, the other with consonant terminations. The latter of these, (which closely resembles the French and Provencal) probably owed its characteristics to the same causes which gave a peculiar form to the latter languages; viz. the larger proportion of Germans who occupied Gaul and northern Italy, as compared with those who settled in southern Italy and Spain. Lombard kingdom, which was the principal Teutonic establishment of Italy, had its head quarters at Pavia: and along the Alps and in the Tyrol3, the Italians came . in actual contact with a German population. Friuli, moreover, and the north-eastern angle of Italy, was the highroad by which armies of Germans continually poured into Italy. And generally it may be observed, that it was in the country lying between the Alps, the Apennines, and the Exarchate, that the German influence was most strongly felt. It is remarkable, however, that

 $[\]kappa^{-1}$ Any body who has heard the harsh and guttural pronunciation of the peasants of Tuscany will not easily believe that considerable changes were introduced into their language for the sake of euphony.

² By the Italian I understand that language which makes the masc. plural in i and the fem. plural in e.

³ M. Raynouard remarks that 'le voisinage et même le mélange de la langue allemande ont influé surtout sur la prononciation du patois d'Engaddine.' Gr. Comp. p. liii. Engaddine is the valley of the Inn on the west of the Tyrol. The language of the Sette Communi, a part of the Vicentine territory, is a nearly pure Teutonic dialect, as may be seen from the specimens of it given in Rose's Letters from the North of Italy, vol. i. p. 257—8, and in the Journal of Education, No. xii. p. 353.

⁴ Few Germans established themselves in the Duchy of Rome

although the consonant dialect occupies so considerable a space in the north-eastern part of Italy, it misses the districts of Venice and Padua, as it does the two *rivieras* of Genoa on the west. Whether this is owing to the influence of the sea-coast in the formation of language (according to the opinion of some philologists¹) or to the comparative exemption enjoyed by those countries from the inroads and dominion of the Teutonic races, (particularly in the case of Venice,) I shall not pretend to determine: certain, however, it is, that the dialects of these districts, though widely differing both from the written Italian and from one another, have not the chief part of the consonant terminations which distinguish all the other dialects of northern Italy².

The statement which M. Raynouard quotes from Giambullari's treatise on the origin of the Florentine language, seems at first sight to prove that the consonant terminations once extended so far south as the city of Florence, and therefore requires our attention. Giambullari was a Florentine, born in 1495, who in 1546 published the first work written by a Tuscan on his native tongue. In this treatise (composed in the form of a dialogue) he undertakes to refute the common

and the Exarchate, according to Savigny, Gesch. des Röm. Rechts, vol. i., p. 395.

¹ See Müller's *Dorians*, vol. ii. p. 488.

² The Venetian dialect is divided between the southern and northern dialects: thus it says, amigo, capo, carne, carità, caratere, potente, abate, fiume; but carbon, corezion, fior, amorin; and it omits the final e of the infinitive, and says amar, perder, sentir. See Boerio, Dizionario del Dial. Veneziano. Venice, 1829. A specimen of the Paduan dialect of the sixteenth century (which closely resembles the Venetian) may be seen in Sismondi, Litt. du Midi, vol. ii. p. 239, c. 15, ad fin.

opinion, that the Florentine or written Italian language. was a corruption of the Latin; and proposes to show that it was derived from the ancient Etruscan: which language he conceives to have been allied to the Hebrew and Chaldean. Having offered various proofs of the affinity of the Etruscan, Hebrew, and Florentine languages, he represents one of the interlocutors in the dialogue as quoting a sonnet written by a certain Agatone Drusi of Pisa, in which the poet says, that 'if his grande avolo, who was the first to join the Sicilian with the Tuscan mode of speech, had left any works, as he intended, he would be greater than all the modern poets, including Dante¹.' The person referred to (Giambullari proceeds to say) is supposed to have been named Lucio Drusi, who wrote a poem on virtue, and another on the life of a lover, which were lost in the sea as he was taking them to the king in Sicily. The writer then argues, that as this Lucio Drusi was not great, either in arms or learning, Agatone does not mean by grande avolo, 'the great man his grandfather.' but 'his ancestor beyond the fifth degree:' whence he reckons five generations, or one hundred and fifty years, from the time of

> Se'l grande avolo mio, che fu'l primiero Che'l parlar Sicilian giunse col nostro, Lassato avesse un' opera d'inchiostro, Come sempre che visse ebbe in pensiero, Non sarebbe oggi in pregio il buon Romiero, Arnaldo provenzal, nè Beltram vostro.

Non Brunellesco o Dante sarian letti. Chè la luce di questo unico sole Sola riluceria lungi e da presso. Giamb. Origine della Lingua Fiorentina, p. 243. ed Milan, 1827. Agatone Drusi, and thus fixes Lucio Drusi in 1170 A.D., the tenth year of William, king of Sicily; the latter is therefore the king who was so unfortunate as not to receive the two poems. The date of L. Drusi being thus ascertained, it is asked in what manner he joined the Sicilian and Tuscan modes of speech: and Giambullari answers this question by saying that 'the ancient Tuscans ended most of their words with consonants, as might be seen from the very ancient Etruscan words before mentioned in the dialogue, while the Sicilians, on the other hand, ended them with vowels: that L. Drusi (as it is said) began to soften that harshness, not by adopting foreign words, but by adding vowels at the end of all the Tuscan words. This custom (he continues) did not please many persons in Drusi's lifetime, but after his death the Tuscans began to follow the practice introduced by him, not only in poetry, but even in prose and in conversation.' This is the substance of Giambullari's argument; and in the first place it may be remarked, that the proceeding by which the date of L. Drusi's compositions is fixed, appears somewhat arbitrary: for Agatone Drusi might have called his ancestor a great man, especially as he doubts not of his superiority to Dante, even if he had never been a great commander or doctor¹. But the statement which more concerns the subject in question, viz. that the Tuscans formerly ended

¹ The existence of Ag. Drusi was at first doubted by Tiraboschi, Stor. della Litt. Ital., tom. iv., lib. 3. c. 3 § 2, and after him by Pignotti, Storia di Toscana, vol. iv. p. 68. Tiraboschi, however, in the later editions of his work, showed that his former suspicion was unfounded, but justly considered Giambullari's argument as to the antiquity of L. Drusi as untenable. L. Drusi probably wrote in the last half of the thirteenth century.

all their words in consonants, seems to me nothing more than an imagination of Giambullari, made in order to support his baseless speculations on the affinity of the ancient and modern languages of Tuscany. The expression in the sonnet refers, as I conceive, to the influence of the Sicilian poetry on the ancient writers of Tuscany, and to their imitation of the earliest Italian compositions in an elevated and refined style1: and not to any change in the structure of the Tuscan language. Giambullari, however, seizes on this passage, grafts on it a false interpretation, supported by a statement which he gives only as a report², in order to strengthen his proofs of a theory which now would on all hands be admitted to be utterly devoid of foundation: and he would have us believe that a certain Lucio Drusi, who wrote in the middle of the twelfth century two poems that were lost in the sea, persuaded the whole population of Tuscany to change one of the most important characteristics of their language. It has been said, that Augustus, though master of the Roman world, could not alter the meaning of a Latin word: how fortunate then was this obscure rhymer, whose example induced a whole nation, in an unlettered age, not merely to change the meaning of a word, but to remodel their entire language³! The stress

¹ See Perticari, Difesa di Dante, c. 4-7.

³ Dicono adunque che Lucio, considerando la nostra pronunzia e la Siciliana, etc. p. 245.

³ If the ancient Tuscan had really been characterised by consonant terminations, the attempt of any individual to change that characteristic would probably have been as successful as that of Frederic the Great to add vowels at the end of the German words, or of Dr. Murray to effect the same improvement in the English language. See the article on English orthography in the *Philol. Mus.* vol. i. The only instance of such a change with which I am acquainted, is in some of the negro

which M. Raynouard lays on this passage of a treatise evidently belonging to the infancy of philology, and abounding in the wildest dreams about the history and languages of Italy, would have reminded me of the eagerness with which a drowning man catches at a straw, if his views were not supported by so many other proofs of a more substantial character¹.

As to the practice of cutting off the final vowel after a liquid consonant in Italian, which M. Raynouard considers as a proof that the vowel was originally added for the sake of euphony, it is to be observed that the Italian writers, especially in poetry, assume the privilege of suppressing it, not merely where M. Raynouard supposes it to have been arbitrarily added, but also in cases where it has manifestly been retained from the Latin: thus the poets contract both amore and amori into amor, both Romano and Romani into Romano.

For example, in the verses of Dante:

Perchè i Pisan veder Lucca non ponno Inf., c. 33, 1. 30.

Poiche i vicini a te punir son lenti ib. l. 81.

son is contracted from sono by the rejection of a final

corruptions of the English (see above, p. 22, note¹); and this, we may be assured, was not made at the suggestion, or by the authority of any individual. Comp. p. 34, note¹.

¹ The same passage of Giambullari is likewise cited with approbation by Perticari, *Dif. di D.*, c. 20; who adds the equally unfounded supposition that the Sicilians derived their final vowels from the Æolic dialect of the Greeks inhabiting their island.

² 'E da sapere (says Castelvetro) che tutti i nomi i quali potevano nel numero minore lasciare la *e* o vero lo *o*, potranno similmente nel maggiore lasciare lo *i*.' Bembo, *Prose*, vol. i. p. 30.

vowel not traceable to the Latin, and evidently added for the mere sake of euphony: veder and punir are contracted from vedere and punite by the rejection of the final e, which appears unquestionably to be retained from the Latin, though this is denied by M. Raynouard: Pisan. however, contracted from Pisani, is evidently not formed, according to M. Ravnouard's own view, by the rejection of an euphonic termination: so that his mode of accounting for the practice of the Italian writers in omitting final vowels is not applicable in all cases; and consequently there is no reason for supposing that those vowels which may be elided were originally added for the sake of euphony. M. Raynouard, likewise, mentions in proof of his assertion with respect to the recent addition of the final vowels in Italian, the name of Boccacio's collection of novels, which by the author was written Decameron, but was afterwards changed into Decamerone. This example, however, has no weight: Decameron was a Greek word which had not passed through the Latin into popular usage, but was first employed by Boccacio himself. If it had thus come into general use, it would doubtless, like fenomeno and lessico, have been modified into Decamero. As it was, Boccacio introduced it into Italian without any change. as Dante employed many uncommon proper names with their consonant terminations, as Minos, Semiramis, Empedocles, Austeric, etc. The vowel terminations of the Italian nouns were, however, as firmly and universally established in the times of Dante and Boccacio as at the present day. As to the peculiarities of Barsape, mentioned by M. Raynouard, they may probably be referred to the dialect of his native city, from which

this early Milanese writer had perhaps not quite emancipated himself: nevertheless the language of this poet (in Perticari's opinion) little differs from that of the early classical writers of Italian¹.

It appears, therefore, that there is no ground for assenting to M. Raynouard's conclusion that the final vowels in Italian were arbitrarily added, at a recent date, for the sake of euphony. Indeed it appears to me that the written remains of that language, so far as they reach, afford every reason for believing that the prevalence of vowel terminations was one of its earliest characteristics: in the Latin documents of Italy, which are of an earlier date than any compositions in the Romance languages, whenever any Italian word or name is accidentally inserted, it almost invariably exhibits the vowel termination, even in charters belonging to the northern states²: whence it seems to me much more

Il mile cento trempta cinque nato Fo questo templo a Zorzi consecrato. Fo Nicolao scolptore E Glielmo fo lo autore.

If this inscription was not set up in the year 1135 A.D. its date, probably, is not much later. A diploma of Roger, Count of Calabria and Sicily, in 1122 A.D., published in Ughelli, *Italia Sacra*, tom. viii. Part I. col. 291, contains many Italian words with vowel terminations.

¹ Dif. di Dante, c. 29.

² For example, the names Petro, Martino, Geminiano, Benedicto, Domminico, Bonoaldo, Raginberto, Lanfranco, Sigefredo, Ingelberto, some of which are of Roman, others of German origin, occur in a document of Lemonte near Lake Como, A.D. 882: and another of Modena, about 980 A.D. published in Muratori, Ant. It. vol. iii. p. 747, 723: and see other instances, from deeds, of the use of the vowel terminations in Italian, during the tenth and eleventh centuries, in Murat. Diss. 32, vol. ii. p. 1030, B.—1037, D. Muratori, vol. ii. p. 1047, B. cites the following verses, which were inscribed in the ancient cathedral of Ferrara:

probable that the dialects of upper Italy originally had vowel terminations, and afterwards lost them, than that the dialects of southern Italy, having originally wanted them, afterwards added them for the sake of euphony.

The impossibility of the derivation of the Italian and Spanish languages from the Provençal is evidenced not only by the retention of the final vowels from the Latin which the Provençal had thrown away, but by the contraction or alteration of many Latin words in the latter language, which the former languages exhibit in a completer and less altered state. But if they had come from the Latin through the medium of the Provençal, this difference could not have been perceptible: the water must have tasted of the impure channel through which it had passed.

Latin. medicus	Provençal. metgel	French.	Italian. medico	Spanish. medico
lingua.	lengua.	langue	lingua	lengua
sæculum	segle	siècle	secolo	siglo
oculus	huel	œuil	occhio	ojo
auricula	aurelha	oreille	orecchia	oreja
diabolus	diable	diable	diavolo	diablo
latro	lairon	larron	ladrone	ladron
pater	paire	père	padre	padre
pavor	paor	peur	2	pavor
frater	fraire '	frère	frate	fratre
mundus	mon	\mathbf{monde}	mondo	mundo
nepos	${f nibot}$	neveu	nipote	nepote
undecim	unze	onze	undici	once

¹ In this list both the Provençal and French masculine nouns are exhibited without the final s, as the object is merely to compare the internal changes in the words.

² The Italian has not preserved the word *pavor*. Paura, like the Spanish pavura, is a fem. substantive in ura, formed from the verb pavere: see below, § 4, on the termination ura.

Latin.	Provençal.	French.	Italian.	Spanish.
sol	solel	soleil	sole	sol
spes	esper	espoir ¹	speme	
eleemosyna	almorna	aumosne	limosina	limosn a
episcopus	evesque	evesque	vescovo	obispo ²

¹ The French oi sometimes came from the Latin e, as in the terminations of verbs, avoir from aver, valoir from valer, etc. (Gr. Comp. p. 257—60), te toi; tres trois; tect-um, toit; mes, mois; sometimes from the Latin i, as digitus, degt, doigt, pix, pec, poix: sometimes from o, as gloria, gloire, vox, voix, Ambrosius, Ambroise: sometimes from u, as punctum point, unctum oint, jungere joindre; sometimes from au, as claustrum cloître. In the two latter cases, u and au doubtless became first o, then oi.

² Bispo, the Portuguese form of episcopus, occurs in a Latin charter of Alboacem, a Moorish king of Coimbra, of the year 784. Rayn. vol. i. Introd. p. xi. At so early a period (as Schlegel remarks, p. 49,) were the peculiarities of the Romance languages developed. The genuineness of the document in question has, however, been doubted: thus Southey, Chronicle of the Cid, p. 406, has the following remarks on it. 'This charter, like the funeral urn of Achilles, the tomb of Alexander, and the relics of the archangel Michael, is the more to be suspected because it would be of such exceeding value, if genuine. It may be doubted whether a Moorish governor, at so early an age. would give charters in Latin, whether at any age he would use the sign of the cross for his mark, and whether the language into which the Latin is corrupted be not of a more modern complexion. But the exemption, if it be forged, could be of no use after Coimbra was recovered by the Christians: so that even in that case it is of very curious antiquity, and may truly state the laws to which the Christians were subject.' There does not, however, appear to be any reason why a Moorish governor should not have given a charter to his Christian subjects in the language which they understood, and which was at that time and long afterwards universally employed by all the Christians of western Europe for the composition of both public and private documents. As to the use of the cross, it is expressly mentioned in the charter that he employed it 'rogatu Christianorum,' in compliance with the wishes of the grantees: and there is no reason to doubt that so many years after the invasion of the Goths, a Romance language was currently spoken in Spain. Gibbon, c. 51, n. 187, citing the substance of this charter from Fleury's Ecclesiastical History says: 'I have not the original before me; it would confirm or destroy a dark On comparing these instances it will be seen that in some cases the Italian and Spanish, and especially the former, do not exhibit the modifications of the Latin word which appear in the Provençal: in others, that the same Latin word has been modified differently in the three languages. The Provençal likewise admits many occasional contractions and changes which do not appear in the Italian: thus

Latin. Provencal. French. Italian. Spanish. nox nueyt or nueg nuit notte noche septimana semana setmana or semaine settimana semmana

Another difference between the several Romance languages consists in prefixing the vowel e to words beginning with s followed by a consonant; a practice which the Spanish always observes, the Provençal and French often, the Italian never. The following examples will illustrate the manner in which the Italian has avoided this change admitted by the Provençal.

Latin.	Italian.	Provençal.	Spomish.	<i>French.</i>
stare	stare	estar	estar	estre (étre)
spiritus	spirito	esperit	espiritu	esprit
strata	strada	estrada	estrada	estrade
sperare scutum sclavus	sperare scudo schiavo stoppa	esperar esclav estopa	esperar escudo esclavo estopa	esperer escu (écu) esclave estoupe (étoupe)

suspicion that the piece has been forged to introduce the immunity of a neighbouring convent.' Gibbon, however, was prone to suspect fraud when ecclesiastics were concerned.

¹ Meidinger, in his *Teutogothic Dictionary*, p. 82, completely mistakes the nature of this euphonic vowel prefixed only to words beginning with s followed by a consonant, in calling it a 'particle,' and comparing it with significant prefixes, such as ge in High German, and a in Anglo-Saxon.

The Spanish has no word beginning with s followed by a consonant: invariably it prefixes e to avoid the concourse of consonants: the Italian, on the other hand, seems rather to seek this sound, since in some cases it even rejects an initial e before s with a consonant, as state for estate from æstas, stimare for estimare from æstimare, sperto for esperto from expertus; in some cases it prefixes s to a word beginning with a consonant, as spergiuro from perjurus, sprofondare from profundus, etc.; and the prefix dis is always curtailed to a simple s, as spietato, sbarcare, scavalcare, etc. It is to be observed, however, that although the Italian rather seeks than avoids the concourse of s with a consonant at the beginning of a word, yet when the preceding word ends with a consonant (which rarely happens) it prefixes the vowel i, as con isdegno, and not con sdegno.

The French seems originally to have had the same tendency as the Spanish of prefixing e to s followed by a consonant; but the tendency was not so strong as to make the practice universal, and many words were formed in it without this change. It is obvious, on looking through the two classes of words which have and which have not undergone this change, that the former belong to an early period of the French language, and that the latter are of a more learned and less popular character, and have been formed with a view of adhering closely to the Latin originals: thus scapula, schola, spatha, spatium, spina, sponsus, stagnum, stannum, stabulum, status, stella, scabinus, schaum, have become espaule, escole, espée, espace, espine, espoux, estang, estain, estable, estat, estoile, eschevin, escume: while scandalum, sculptor, statua, statutum, stipulatio, stratagema, structura, stylus, have become scandale, sculpteur, statue,

statut, stipulation, stratagème, structure, style. In some cases there is both an ancient and a modern derivative from the same Latin root: thus from stomachus is the old word estomac, but from stomachicus comes the modern medical term stomachique; from studium étude, but from studiosus studieux.

There are also many words in which the Italian has retained the Latin p, while the Provençal and Spanish have changed it into b, the French into v^1 : thus

Latin.	Italian.	Spanish.	Provençal.	French.
aperire	aprire	abrir	ubrir	ouvrir
aprilis	aprile	abril	abril	avril
capillus	capello	cabello	cabel	cheveu
capra	capra	cabra	cabra	chèvre
capistrum	capestro	cabestro	cabestre	chevestre
juniperus	ginepro	enebro	genibre	genievre
opera	opera	obra	obra	oeuvre
sepelire	seppellire	sepelir	sebelir	en-sevelir
sapere	sapere	\mathbf{saber}	\mathbf{saber}	savoir
sapor	sapore	\mathbf{sabor}	sabor	saveur

In some cases, however, the Italian has changed the Latin p into w; as in riva from ripa, and in povero from pauper.

In the Provençal likewise may be discerned the tendency which has been very prevalent in the French, but of which there is scarce a trace in Italian and Spanish, of changing c before a into ch: thus from cantare the Prov. has both cantar and chantar, chanter French; from cantio, canson and chanson, chanson French.

The following differences have prevailed in the Romance

See Rayn. Gr. Comp. p. xxvi., Grimm, Deutsche Rechtsalterthümer, p. 776. On this change in Spanish, see Mayans i Siscar, vol. ii. p. 146.

languages with respect to the changes undergone by the Latin c before vowels.

In Latin c before all vowels was equivalent to k; thus ca, ce, ci, co, cu=ka, ke, ki, ko, ku.

In Italian c has retained the sound of k before a, o, and u; as caro, coro, cura: but it has become ch before e and i, as Cerere, cinque (according to the English pronunciation, cherere, chinque¹).

In Spanish, as in Italian, the c retains the sound of k before a, o, and u; but before e and i it has the force of th, as Ceres, cinco, (pronounced theres, thinco.)

The French c before a has usually become ch, as carus, cher; caro, chair; camera, chambre; capra, chèvre; castanea, châtaigne; carmen, charme; caput, chef; calidus, chaud; calvus, chauve; caulis, choux; scabinus, eschevin; karr, char; bucca, bouche; musca, mouche, etc.: before e and i it is pronounced like s, as ceci, (pronounced sesi:) before o and u it has (as in Italian and Spanish) retained the sound of k, as comme, contre, couleur, col, corde, corps, culte, curé, courbe. Not unfrequently, however, the Latin c has remained unchanged before a: but (as has been already remarked of the prefix e before s and a consonant) in words which belong to a later period of the language. and which have a more learned aspect; as cadavre, calomnie, canal, candide, canon, capable, capituler, caractère, cataracte, catégorie, etc. Sometimes there is a double derivative from the same word, as in the following examples:

¹ It will be observed that this statement only applies to the southern Italian dialect with vowel terminations: that of the north with consonant terminations, pronounces the c like the French. (See above, p. 95). In Tuscany the sound of c before e and i has been softened, so that it is pronounced like sh in English.

Latin.	Ancient French.	Recent French.
calx	chaux	calquer
canonicus	chanoine	canonique
capitulus	chapitre ¹	capitule
captivus	chetif	captif
capra	chèvre	caprice
carbo	charbon	carbon
carta	charte	carte
causa	chose	cause

Chevalier and chevalerie were the ancient forms from cheval (caballus;) cavalier and cavalerie were probably borrowed from the Italian. From canis was formed chien; but from canicula canicule; from candela chandelle, but from candela-brum candélabre.

It is obvious that these diversities of pronunciation could not have been borrowed by the Romance languages from each other, or from any one common origin: but that they must have been produced by the separate workings of each, and by the different vocal organization of the populations by which they were spoken. Nor is there any reason to suppose that they were of recent introduction: for we know that at the Sicilian vespers the French were distinguished from the Italians by being made to pronounce the words ceci and ciceri; and consequently the characteristic peculiarities of the French and Italian pronunciation were as firmly established at the end of the thirteenth century as at the present day; and it will be observed that in the pronunciation of c before e and i, both these languages differed from the Latin; thus ceci according to the Latin pronunciation would be keki, according to the Italian chechi, according to the French sesi.

¹ Chapitre from capitulus like épitre from epistola, titre from titulus.

§ 3. GENDERS OF NOUNS.

With regard to the genders of nouns, it may be observed that as the use of them, like that of cases, requires some knowledge and discrimination, they are naturally destroyed or confounded by the same causes which lead to the destruction of inflexions, and the substitution of analytic for synthetic forms. Thus the Anglo-Saxon genders were lost at the Norman conquest: and the English only retains the natural genders; that is to say, no nouns have any gender which do not designate male or female individuals. The influence of

¹ This appears to me to be a correct statement of the English usage of genders; our language never marks genders except by the use of the pronouns he and she, the former of which refers to males, the latter to females: of the relative who, which refers either to males or females. and of it and which, which refer only to inanimate things. The neuter forms it and which are commonly used in speaking of brute animals, especially where the sex is not apparent, as in insects, fish, birds, etc.: but never in speaking of the human race, except sometimes of infants. Whenever he and she are applied to an inanimate thing, as to the sun. the moon, a country, or a quality of the mind, the object is personified: the same is also the case with a ship, which a sailor personifies, in order to represent it as an object of affection. In all cases where he or she is applied to an inanimate thing, it would be correct, though perhaps not so energetic or suitable to the expression, to employ the neuter pronoun. It appears to me, therefore, that the state of things which Grimm anticipates, viz. that 'the English language will at some future time limit the use of he and she to persons, and in all other cases employ it. (vol. iii. p. 547,) has already arrived, and has indeed existed for some centuries. Our language has no grammatical genders: the masculine. feminine, and neuter pronouns are applied with reference, not to the noun itself, but to that which the noun signifies. Whereas in languages which have grammatical genders, the noun itself has a certain gender. without reference to the sex or animation of the object signified: thus in Greek παιδίον is neuter, πέτρα is feminine, and αίγιαλὸς masculine. although a child is either male or female, and a rock and a shore are lifeless objects.

the German conquest on the Latin language, as in other respects it was not so great as that of the Norman conquest on the Anglo-Saxon language, so likewise in respect of genders it did not produce so considerable a change: but it left the masculine and feminine genders of nouns, and only destroyed the neuter gender. In all the Romance languages the Latin genders of nouns were, for the most part, preserved unchanged, with this general exception, that all the neuter nouns became masculine1. The close coincidence of the inflexions of masculine and neuter nouns in Latin, as caballus and damnum, sol and sal, naturally led to this confusion². The resemblance of these two genders, sufficiently great in the Latin, was moreover increased by the changes in the form of nouns which took place in the Romance languages: for in the Ital. and Span, the forms in us and um were identified by the use of the acc. case; since caballum, damnum, or their derivatives in o, had the same invariable termination; and in the Prov. and French the general adoption of the Latin nom. terminations produced a similar identity, as those words became cavals and dans. Hence in Ital. and Span. the nouns in o. and in Prov. and French those in s, were together as masculines generally opposed to feminine nouns in a. Besides this universal change of neuter into masculine nouns, there are, however, particular deviations in the Romance nouns from the Latin gender; in some of which the reason is apparent, in others it is more obscure.

¹ Some pronouns in Provençal and Spanish preserved the neuter form; see below, chap. 3.

² See Grimm, vol. iii. p. 542.

In the first place the Italian changed the gender of some nouns of the third declension, as arbore, fronte, aere, carcere, cenere, fine, folgore, fonte, margine, ordine, which it made both masculine and feminine. Whereas in Latin the two first were always feminine, and the eight last always masculine. The Spanish, likewise, has changed the gender of several nouns of this declension: thus carcel, fuente, leche, legumbre, miel, sal, are feminine; arte, dote, canal, mar, margen, orden, fuente, are of both genders. In Provençal carcer, dens, fons, mar, are feminine: arbre is masculine. In French, likewise, many Latin nouns have changed their gender without any apparent reason, as dent, font, mer, mode, obole, have become feminine: corn in old French was masculine. (Gr. Comp. p. 65;) cor is now masculine, but corne is feminine; arbre, art, été, ongle, salut, sort, have become masculine: hymne is of both genders². Moreover, in the Latin nouns making orem in the accusative singular. which the Provençal adopted without further alteration. than the addition of s to the truncated accusative. it changed the gender from masculine to feminine, except in those words which signified a male. Thus from the Latin amor, color, dolor, dulcor, flos, honor, sapor, timor. valor, were formed the Provencal amors, colors, dolors. doussors, flors, honors, sabors, temors, valors, feminine: lavors, however, from labor, retained its masculine gender3. The old French preserved the same terminations.

¹ Castelvetro on Bembo, vol. ii. p. 26.

² Grimm, vol. iii. p. 560, cites souris fem. from sorex masc. as an instance of this change of gender in French. Sorex, however, being the name of an animal, was doubtless of both genders, and perhaps the feminine was familiarly used in preference, as in xvòv and canis.

The following Provençal passage from Dante's Purgatory, canto

but likewise changed the gender: thus 'la bonne amor,' 'l'amors que Diex m'a commandée,' 'de bone amor,' 'sous la color de pitié,' 'la dolors,' 'la flors,' 'dont la tenors estoit telle,' 'une des plus altes honors,' (Gr. Comp. p. 59—61, 84.) This termination in or, when the s had been disused, and the form of the acc. had supplanted that of the nom., was in French successively changed into our and eur: and, with the exception of words such as acteur, auteur, seigneur, from actor, autor, senior, etc. which are necessarily masculine, and the forms labour, and labeur, from labor, and honneur from honor', which have retained the Latin gender, this termination is always feminine. Thus ardeur, clameur, chaleur, couleur, douleur, erreur, fleur, fureur, horreur,

26, as restored from the Mss. by M. Raynouard, *Journ. des Sav.* 1830, p. 67—78, clearly exhibits this change of gender:

Tan m' abellis vostre cortes deman
Ch'ieu non me puesc ni-m voil a vos cobrire;
Ieu sui Arnautz, che plor e vai cantan;
Consiros vei la passada follor,
E vei jauzen lo joi qu'esper denan;
Aras vos prec, per aquella valor
Que us guida al som sens freich e sens calina,
Sovegna vos atenprar ma dolor.

That is, literally translated: 'So much does your courteous demand please me that I neither can nor will conceal myself from you. I am Arnald, who weep and go singing. Grieved I see the past folly, and I see with pleasure the joy which I hope for the future. Now I entreat you by that virtue which guides you to the summit without cold and without heat, that you will remember to assuage my grief.' For further details relating to this passage, see Raynouard, Journ. des. Sav. ubi sup. [Lexique Roman, vol. i. p. xlii. Blanc, Vocabolario Dantesco, Art. Tan m' abellis.]

¹ Honneur was, however, feminine in old French, as in one of the instances above cited.

humeur, liqueur, mæurs, odeur, pâleur, peur, pudeur, riqueur, rumeur, saveur, splendeur, sueur, terreur, torpeur, tumeur, valeur, vapeur, vigueur, are feminine, although the Latin nouns from which they were derived are masculine. In their derivatives from these same nouns, the Italian and Spanish have constantly preserved the masculine gender. It is difficult to say what induced both the Provençals and French to change the gender of so many Latin masculine nouns in or: probably, however, it was the tendency to designate abstract qualities by feminine nouns, so observable in the Latin languages, which led to the deviation in question.

Other variations of gender, of which we can trace the cause, arose from the changes in the terminations of nouns which took place in the Romance languages. Thus in the modern languages o was generally the masculine, and a the feminine termination; and hence many forms in o derived from Latin feminine nouns became masculine, and many forms in a derived from Latin masculine or neuter nouns became feminine. In this manner all Latin feminine nouns of the second and fourth declensions became masculine in Italian, as il pero, il melo, il fico, il duomo, except la mano from manus. The same change has likewise been made in Spanish: which, however, has preserved the feminine gender of manus. On the other hand, some masculine and neuter nouns in a have become feminine, as

¹ Flor, however, is feminine in Spanish, and flore was sometimes made feminine in old Italian: Perticari, Dif. di Dante, c. 13, vol. i. p. 323.

² See Grimm, vol. iii. p. 531.

³ Castelvetro on Bembo, vol. i. p. 19.

aria, (from aëra,) cometa, cresima, flemma, salma, Ital.; asma, Span.; anagramme, énigme, French1; fantasima and tema in Ital., have both genders. On the other hand, baptisma, psalma, sophisma, having retained their genders, became battesimo, salmo, sofismo, in Ital.; bautismo, salmo, in Span., while stigmata plural in Ital. became stimati. Sometimes, however, the Ital. noun not only formed its plural according to the regular analogy, but also preserved the Latin plural in ora or a, as i corpi and le corpora, i tempi and le tempora, i prati and le prata, i corni and le corna, gli ornamenti and le ornamenta, etc.; and as in these cases the plural in a became feminine, it was sometimes changed into e, the regular feminine plural, as gli ossi, le ossa, and le osse, i legni, le legna, and le legne². In some cases, moreover, the neuter plural of the Latin became the feminine singular of the Italian noun, thus arma, strata, spolia, insignia3, fata4, pecora, folia, vela, ulcera, became in Ital. l'arma, la strada, la spoglia, l'insegna, la fata, la pecora, la foglia, la vela, (the sail,) la ulcera⁵: so likewise in Span. arma, bona, claustra, dona, fata, folia, insignia, plana, pecora, signa, strata, vela, ulcera, Latin, became l'arma, la bona, la claustra, la dona, la fada, la hoja, la

¹ Popular usage had already made this change in Latin, in some words: thus schema ($\sigma\chi\tilde{\eta}\mu\alpha$) is made feminine by Plautus and Suétonius, glaucoma ($\gamma\lambda\alpha\dot{\nu}\kappa\omega\mu\alpha$) by Plautus, etc.; see Scheller's Latin Grammar, by Walker, vol. i. p. 474.

<sup>Castelvetro, ib., p. 21.
Castelvetro, ib., p. 35.</sup>

⁴ Menage, Etym. Ital., in v.

⁵ The Italian, however, likewise had the form *ulcero*, irregularly formed from *ulcus*, (above, p. 74, note ¹,) now obsolete. It likewise preserved il velo, for the veil.

(

insegnia, la laña, la pecora, la seña, la estrada, la vela, la ulcera¹. In French, likewise, we find dépouilles, dette, étude, fée, feuille, huile, idole, lèvre, pomme, ulcère, of the feminine gender. In Italian the Latin millia has become miglia, in the sense of miles; from the feminine plural miglia, the masculine singular miglio has been formed. In Spanish the Latin millia has become the feminine singular milla, in the sense of a mile; which makes millas in the plural. So in English kitten the plural of cat, chicken the plural of chick, twin the plural of two, stocken, (stocking) the plural of stock², and garden the plural of geard or yard, have become singular, because the ancient plural termination in en, like the Latin neuter plural in a, is no longer understood³.

From this comparison of the changes which have taken place in the Latin genders, it appears that though all the Romance languages agree in retaining the masculine and feminine, and rejecting the neuter gender, and in changing the neuter into the masculine, yet that the Provençal has introduced innovations from which the Italian and Spanish are free, and in which it agrees remarkably with the French; and that the Italian has retained vestiges of the Latin which do not appear in the Provençal. These facts therefore are inconsistent with the supposition that the Provençal was the most ancient form of the Italian and Spanish languages.

¹ See Sanchez, *Poes. Castell*, vol. i. p. 392, 386, vol. iii. p. 392, 439, vol. iv. p. 307. [Other examples are given by Diez, *Rom. Gr.*, vol. ii., p. 21.]

² See Johnson, in stocking.

³ Holstein, the proper name, (whence Holsteiner,) has in like manner been corrupted from Holsten, the plural of Holste: see Grimm's Deutsche Rechtsalterthümer, p. 316, note.

§ 4. FORMATION OF NEW ROMANCE NOUNS BY AFFIXES.

- M. Raynouard enters into a long comparison of the terminations of substantives in the Romance languages, and shows a great resemblance between the Provençal and the others, whence he would, as usual, infer the derivation of the latter from the former. (*Gr. Comp.* p. 23—71.) These similarities may be reduced to three heads.
- 1. Those in which the Provençal has preserved the Latin word unchanged, such as barba, herba, comedia, bestia, forma, pluma, persona, aurora, animal, etc. The agreement of the other languages with the Provençal in these forms evidently furnishes no proof of their derivation from the Provençal, as the Provençal and Latin are here the same. M. Raynouard seems occasionally to forget that the presumption is in favour of the Latin, and that the burden of proof lies on him to show that the Italian and Spanish came not from the Latin, but from another modern language.
- 2. Those terminations which were formed from the inflexion of the Latin nouns, as has been above explained. There would be nothing singular in different nations forming new substantives from the inflected cases, when they were influenced by the same causes, even if the agreement was perfect, which, as we have shown, it was not: inasmuch as the Provençal and French retained the termination of the Latin nom., of which there is no trace in the Italian and Spanish. Hence the agreement of the Italian and Spanish with the Provençal in such terminations as metal, val, man, mar, part, trinitat, magis-

trat, fren, orient, argument, mes, fin, marit, titol, leon, amor, carn, etc., affords no argument in favour of the derivation from the Provencal, as they are merely Latin words deprived of their terminations, a process which each language could doubtless have performed for itself without the intervention of the Provençal. Nor is it by any means true that the terminations of nouns agree in the different Romance languages; for M. Raynouard has only produced this exact correspondence by cutting off the only characteristic peculiarity which belongs to each language, and leaving what they have in common, the Latin type. Thus when he has omitted the final s of the Provencal and French, and the final vowel of the Italian and Spanish nouns, which are their distinctive and proper marks, it is easy to say that amor and metal are the same in all the four tongues: whereas in fact the Provencal and French forms are amors and metals, the Italian amore and metallo, the Spanish amor and metallo.

3. Those substantives whose termination does not agree with the Latin, but is the same in the Romance languages.

M. Raynouard himself perceives the difference between this and the other two classes, and the assistance which these examples afford to his argument, though he does not admit that the other forms are just as consistent with the falsity as with the truth of his theory. 'If (he says) many of the terminations pointed out come from the Latin, by the preservation of the entire word, as animal, etc., or by the omission of the final syllable which marked the case, as pont-em, there are many others which do not come directly from the Latin, and which have been introduced into all these languages, and joined to words to which the Latin annexed another

the Italian makes imagine, the Spanish imagen, the Provençal and French, by the rejection of the final n, image.¹ Of all the modern languages the Italian alone appears to have formed new nouns with the termination agine, or aggine, as dappocaggine, fanciullaggine, fantasticaggine, infingardaggine, insensataggine, scempiaggine, sciagurataggine, seccagine, etc.²

ANTIA, ENTIA. Feminine nouns having this termination in Latin were derived from participles or participial adjectives in ans or ens, as abundantia, diligentia, obedientia, petulantia, sapientia. The Romance languages varied these terminations as follows; anza, enza Ital. and Prov., anza, encia Span., ance, ence French. Sometimes all the languages agreed in forming new derivatives with these terminations, as tardanza Ital. and Span., tarzanza Prov., tardance French, decadenza Ital., decadencia Span., descaienza Prov., décadence French. Sometimes each language formed separate words of its own, not occurring in the others: thus, mancanza, vicinanza Ital., échéance, bienviellance, jactance, nuance Fr. Sometimes also the corresponding words are derived from the forms peculiar to each language; thus fidanza Ital., from fidare, but fianza Span., and fiance French, from fiar and fier. Credenza Ital., from credere, credencia, and also creencia Span.,

¹ The Italian, likewise, has used the form image, which it has likewise changed into imago, like uome and uomo, etc., see above, p. 74. Image occurs in Dante, Purg. xxv. 26; Par. ii. 131; xiii. 2; xix. 2; on which latter place Lombardi says, 'Image qui come altrove, adopera alla francese, per immagine.' M. Raynouard mistakes the form of this word by comparing it with the masc. termination in aggio: Gr. Comp. p. 31. See below, in this termination.

² See Diez, Rom. Gramm. vol. ii. p. 317.

from creer, credence, créance, and croyance French, from croire; possanza Ital., pujanza Span., puissance French¹.

Anus, ianus. In Latin this was properly an adjectival termination, as Romanus, urbanus, Christianus. As proper names were often inflected with it, adjectives of this form frequently were used substantively, as Romani, Pompeiani, Christiani, etc. In the Romance languages it is usually a substantive termination: in Ital. ano, in Span. ano and an, in Prov. an, in French an, ain and en. Thus from paganus the Ital. and Span. have made pagano, the Prov. pajan, the French payen. Many modern words have been formed in the several languages with this termination: thus scrivano Ital., escribano Span., escrivain French, sagrestano Ital., sacristan Span., sacristain French. Parmigiano, partigiano, maomettano Ital., cormanos, lozano, mahometano Span., hautain, luthérien, magicien, mahométan, parrain, paysan, Péruvien, prochain French².

ARIUS, ARIS. The first of these terminations was common to both kinds of nouns in Latin, though properly belonging to adjectives, as armentarius, nefarius, senarius: the latter was confined to adjectives, as militaris, vexillaris. From arius the Italian has modified the several terminations ario, aro, aio, iero, iere³, the Span. ario, ero, er: the Prov. ari, ar, er, and ier; the French aire, er, ier, (Gr. Comp. p. 35, 48.)4 Aris in Ital. and Span. becomes are and ar: the French confounds it with the derivatives of arius under the terminations aire and ier, as the Prov. confounds them under the termination

¹ Diez, Rom. Gramm. vol. ii. p. 357.

² Diez, ib. p. 310.

³ See Castelvetro on Bembo, vol. ii. p. 23, and above p. 93, note ³.

⁴ See also Raynouard, Obs. sur le Roman de Rou, p. 10.

ar: thus from falsarius, militaris, Januarius, and singularis, the French made faussaire, militaire, Janvier, singulier; and from scholarius and familiaris the Prov. made escolar and familiar, (Gr. Comp. p. 35, 110.) The following table of some Latin words shows the relation which the modern terminations bear to the ancient one.

Latin.	Italian.	Spanish.	French.
denarius	danaro, danaio	dinero	denier
ferrarius	ferraio	herrero	ferrier
granarium	granaio	granero	grenier
Januarius	Gennaro, Gennaio	Enero	Janvier
librarius	libraio	librero	libraire
primarius	primario, primaio,	primario,	primaire, premier
	primiero	primero	
scutarius	scudiere	escudero	escuyer

When these modifications had once been established, a great number of new substantives were formed with them in all the languages.

Italian.	Spanish.	Prov.	French.
cavaliere	caballero	cavalier	cavalier <i>or</i> chevalier ¹
corriere or -ero	corriere	corrier	courrier
destriere ²		destrier	destrier
falconiere	halconero	falconier	fauconier
guerriero	guerrero	guerrier	guerrier
pensiere or -ero	_		
prigionere -ero	prisionero	presonier	prisonier
sparviere -iero	_	esparvier	espervier
straniere	extrangero	estranher	estranger

This termination has been much used in all the languages for the formation of new nouns, and in particular it has been employed after the model of the Latin,

¹ See above, p. 111.

² i.e. dextrarius. See Muratori in v.

which made librarius, lignarius, ferrarius, vestiarius, sellularius, lapidarius, œrarius, etc. to form nouns which signify certain orders, professions, or trades. This may be observed in several of the modern words, such as cavalier. courrier, fauconier, already mentioned, and it may be further perceived in several forms common to the Ital. and Span., as cameriere Ital., camerero Span.; caffetiere Ital., cafetero Span.; forastiere Ital., forastero' Span., banchiere or banchiero Ital., banquero Span.; carceriere Ital., carcelero Span. In other cases these two languages have respectively forms of this kind peculiar to each, as calamaio, masnadiere, condottiere, dardiero, girellaio, Ital.; agujero, mercadero, tintero Span. The French nouns in er and ier, forming their fem. in ère and ière, are in great number, and comprehend most of the words signifying the persons belonging to different kinds of trades, professions, orders, etc., as aumônier, banquier, boulanger, boucher, chancelier, contrebandier, cordonnier, cuisinier, douanier, fermier, huissier, héritier, mercier, meunier, rentier, roturier, sorcier, usurier, etc. The French has likewise modern nouns in aire, as sociétaire, fonctionnaire, factionnaire2.

The various modifications of the Latin ministerium (menester Span., mistero³, mestieri, mestiere or mestiero

¹ From the Latin foras: see Muratori in v.

² The French nouns in *aire* are probably of a later date than those in *er*, and the two classes appear to stand to each other in the same relation as those pointed out above, p. 108, 111.

³ Perticari, Scrittori del Trecento, lib. i. c. ii. vol. i. p. 58, who calls the ancient use of mistero for mestiero a 'bruttissima, anzi sacrilega permutazione,' does not see that mistero is nearer than the common form to ministerium, and that it was evidently corrupted into mestiero in order to avoid the confusion with mistero derived from mysterium.

Ital., mestier Prov., métier French) do not belong to the modern words formed with the termination er or ier, but are corrupted and contracted from the Latin word. Bicchiere Ital., and picher French, are derived from the German becher¹, (beaker Eng., bicker Scotch): alfiere Ital., and alferez Span., are said to be derived from the Arabic alpheres².

This termination had in Latin a diminutive ASTER. force, which, as in many other instances, sometimes passed into a contemptuous sense, as filiaster, a stepson. calvaster, a little bald, oleaster, a wild, bad olive, poetaster, a worthless poet, etc.3 Hence the Ital. and Span. have derived the termination astro, the Prov. and French the termination astre, which the latter has softened into atre. Thus figliastro Ital., hijastro Span., filhastre Prov., filastre or filâtre Fr. The French and Span. have marastre or marâtre and madrasta for stepmother, which word does not occur in Italian. The French uses this termination as a diminutive, (like the English ish,) as blanchâtre, bleuâtre. douceâtre, grisâtre, folâtre, jaunâtre, rougeâtre, saumâtre, etc.4 The Ital. and Span. sometimes give it an opprobrious force, as filosofastro, medicastro, teologastro, etc. which it likewise has in the French acariâtre and opiniâtre.

¹ See Menage, Et. It. in bicchiere.

² Menage in alfiere. [Compare Diez, Rom. Gr. vol. ii., p. 327.]

³ See Grimm, vol. ii. p. 372.

⁴ See Muratori, in salmastro, and Menage in falcastro from falx.

^{6&#}x27;Also in marâtre: 'L'opinion qu'en général on a des marâtres dont le nom seul parmi nous est devenu presqu'une injure, est justifiée par les faits.' Guerry, Statistique Morale de la France, p. 22. The word commonly used in French for stepmother is belle-mère, which also signifies mother-in-law: in Italian suocera, not having the termination in astra, has not, as far as I am aware, obtained a reproachful

ATIUM, as in palatium. In Latin, however, the more common form was itium, as exitium, servitium, being a neuter form of the fem. termination itia, as in lætitia, sævitia, which will be noticed under another head. From atium the Ital. made agio, forming palagio from palatium, as servigio from servitium; in other Ital. words likewise t was changed into g, as stagione, ragione, from statio. ratio. In all the Romance languages this termination has assumed nearly the same form: thus it is agio or aggio in Ital. azgo or age in Span.1, atge or age in Prov., and age in French: and although it is of rare occurrence in Latin, has in all the modern Latin dialects served to form a great variety of new nouns. And from the Romance languages it was translated into Low Latin, under the neuter form of agium; thus from maritagio or maritage came maritagium, from homagio or homage homagium. If these words had been formed in Latin according to the true analogy, they would have been maritatium and hominatium. Sometimes, however, a Low Latin form in aticus corresponds to a Romance form in agio or age, as formaticus (cheese) to formagio and fromage², hostaticus to

force, although the character of stepmothers in Italy (unless they have greatly improved since ancient times) is probably not at all superior to that of stepmothers in France. [Compare Diez, Rom. Gr. vol. ii. p. 363.]

The Spanish varies more in this termination than the other languages: thus it had not merely patronazgo corresponding to padronaggio and patronage, but ventaja corresponding to vantaggio and avantage, ultraje corresponding to oltraggio and outrage. The popular dialect of Rome formerly made this termination in ajo, as lennajo for linnaggio, dannajo for danneggio, in the Roman history in Muratori, Ant. It. vol. iii. p. 399, 501. This, however, was rather a variety of orthography than of form, as j was pronounced hard as in French.

² See Menage in formaggio, Schwenck's Etymological Remarks in

INUS. This is a termination of nearly the same kind as anus, and is chiefly confined to adjectives, as caballinus, Latinus, marinus, masculinus, matutinus, peregrinus, supinus, vicinus. It occurs, however, in substantives of the fem. and neut. gender, as farina, medicina, rapina, ruina, salina, lupinum, salinum. The Ital. and Span., which have made it ino, the Prov. and French, which have made it in, used it for the formation of substantives, as festino and festin derived from festus. (Gr. Comp. p. 50.) In Italian this termination is still in great use, with a diminutive sense, as ragazzino, tavolino, bambino from bambo (i. e. babe¹). It likewise has a diminutive force in Spanish. The French has also used it for the formation of new words, but without a diminutive force, as angevin, bavardin, chevrotin, diablotin, fagotin, patelin, Poitevin, bécassine, routine: so also names of parties in the French revolution, Brissotin, Girondin 2.

ISTA. This termination, introduced into the Latin at a late period from the Greek, has passed into the modern languages: thus copista, legista, algebrista, cabalista, Ital. and Span.; copiste, légiste, algébriste, cabaliste, modiste, dentiste, French.³

O, onis, masculine, as in caupo, latro, sermo, commilito, and in proper names, as Scipio, Casio, Capio, Maro. Hence the Ital. one, the Span. Prov. and French on (Gr. Comp. p. 56, 7). Thus bastone Ital., baston Span., Prov. and Fr.; falcone Ital., halcon Span., falcon Prov., faucon

¹ In Italian this termination has commonly a sense of tenderness, but sometimes the sense of contempt which belongs to diminutives: see Marrini on the *Lamento di Cecco*, p. 166. Payne Knight's *Essay on Taste*, p. 229. *Philol. Museum*, vol. ii. p. 679, 685.

² See Grimm, vol. iii. p. 703. [Diez, Rom. Gr., p. 313.]

³ [Diez, ib. p. 363.]

French; milione Ital., millon Span., million Fr.; campione Ital., campeon Span., campion Prov., champion French. Many of the modern nouns of this form are derived from a German root: thus bastone comes from bat or bast. campione from kampf, spione from spähen, to spy, balcone from balk, marrone from marre, a chesnut, poltrone from polster, prigione from prisund, sperone from sporn, fellone from fell'. Antrustione, barone, and garzone? have likewise German roots. In French it has been used for the formation of many words, as aiguillon, caisson, chaînon, brouillon, jambon, menton, monton, rejeton, téton, vallon, piéton; and in this language it is sometimes a diminutive termination, as in mignon, salon, and in the familiar proper names Alison, Lison, Robichon, Fanchon, Jeanneton, Louison, Gothon, Marion, Nanon, Ninon, Suson³. Italian likewise it frequently occurs, sometimes as a mere formative termination, as in burrone, falcione, montone, and other instances above cited, and sometimes with an augmentative force, as donnone, salone, cavallone. In Spanish,

¹ See Menage in bastone and fellone, Muratori in spia, balcone, marrone, poltrone and poltrire, prigione and sperone. I have not thought it necessary to repeat the Spanish and French forms of the words mentioned in the text.

² Garzone, according to Muratori, is derived from an ancient Frankish word, which is written Gartio in an Italian document of the ninth century. Ant. It. vol. ii. p. 1118, A—C. Garzüne in the Nib. Lied, v. 905, is probably borrowed from the Romance. In Low Latin a marquis is marchio, a noun of this form, and not marchensis, the form used in the Romance languages.

³ Grimm, vol. iii. p. 705, is mistaken in supposing that the old French proper names in on, as Charlon, are of this form. They are the ancient accusative case from the nominative in es or s: see above, p. 81.

likewise, on is sometimes an augmentative: thus hombron from hombre, calaveron from calavera¹.

On the feminine termination io, ionis, and its use in the modern languages it is unnecessary to say any thing.

This masculine termination is of two kinds: first. when it denotes qualities, as amor, honor, color, and secondly, when it denotes persons, as imperator, lictor, possessor. Among the modern languages, it has become ore in Italian, or in Spanish and Provencal, and in old French; in which language it has since been modified into our and eur. (Gr. Comp. p. 59-61, above, p. 84.) The modern languages have formed, with this termination. some new words corresponding to the former class of Latin nouns, as bollore, malore, rancore, tristore², sentore, verdore, Ital.; frescor, rencor, verdor, Span.; frescor or fraicher, verdor, Prov.; fraîcheur, lueur, lenteur, rancueur, pesanteur, profondeur, verdeur, French. The chief part of the new substantives formed with this termination belong, however, to the other class of nouns signifying persons, as miratore, servitore, Ital., mirador, servidor, Span. and Prov., serviteur, French. So likewise ambasciatore, coniatore, conoscitore, confettatore, Ital., embaxador. matador, picador, sangrador, Span.; accapareur, accoucheur, agioteur, escamoteur, farceur, siffleur, vendangeur, French.

It has been already remarked that the Provençal and French changed the gender of the nouns in or signifying qualities, and said la dolor, la color, la frescor, la verdor, etc., while the Italian and Spanish preserved the masculine gender not only in the words retained from the Latin,

¹ On the Italian and Spanish augmentatives of this form see Grimm, vol. iii. p. 705. [Diez, Rom. Gr. vol. ii. p. 318.]

On tristore, see Perticari, Dif. di Dante, c. 26, vol. ii. p. 36.

as amore, colore, amor, color, but also in the words newly formed, as in rancore, verdore, Ital., frescor, rencor, verdor, Spanish¹.

Tas, tatis, Tus, tutis, as in servitus, virtus, bonitas, libertas. Since (as has been above shown) all the modern languages, in forming nouns from Latin substantives of the third declension, took the accusative case as their type, these terminations became in Ital. tate and tute; in Span. tad and tud, anciently tat and tut; in Prov. tat and tut: in French tet and tut. In Italian the terminations in tate and tute were formerly written at full length, as cittate, veritate, virtute, or cittade, veritade, virtude; for some time, however, they have, by the omission of the last consonant, been contracted into tà and tù, (i. e. tas and tue), so that these words have now become città, verità, virtù: this change, nevertheless, has only affected the termination tute or tude, as salute and palude have preserved their ancient form. Cittate or cittade, virtute or virtude, and other similar nouns were contracted into città and virtù in order to avoid the repetition of the double t, or of the t and d; but salute and palude were not contracted. because there was no such cacophony to avoid. French having, as in many other instances, changed the a into e, made originally libertet, citet, nativitet, volontet: it has since suppressed the final t, and indicated its suppression by the acute accent, as liberté, cité, nativité, vo $lonté^2$: in the termination tut, it has merely suppressed the

¹ See above, p. 114. [Diez, Rom. Gr. vol. ii. p. 325.]

² When the ancient termination was not at but ata, the French, following its two rules of changing the final a into e muet, and at in a termination into é, converted it into ée: thus, amat (from amo) became aimé, amata, aimée. So likewise fumée, French, corresponds to fummata Ital.; armée French, to armata Ital. and armada Span.; fée

final t, and from vertut made vertu. (Gr. Comp. p. xix. 37—42, 68, 69.) Many new substantives have been formed in the modern languages with this termination, as beltate or beltà Ital., beldad Span., beltat Prov., beauté French; lealtà, sovranità Ital., lealtad, sovranidad Span., loyauté, souveraineté French. So likewise schiavitù Ital., esclavitud Span., debonnaireté, gaîté, honnêteté, netteté, oisiveté, papauté French¹.

Ulus, ellus, illus. Ulus, or olus, in Latin, was originally a mere formative termination, as in sedulus, garrulus, famulus, credulus, gerulus, ungula, regula, fabula, Graculus, Panulus, Romulus, Scavola: afterwards it obtained a diminutive sense, as in regulus, filiolus, and in Hadrian's address to his soul, animula vagula, blandula². The Italian in adopting this termination changed it into olo, or uolo, as favola, tavola, figliuolo, from fabula, tabula, filiolus; and has formed with it many new words. as bussolo, nuvola, gocciolo, piccolo, (from putus,) legnajuolo, The Spanish modified this termination into uelo, as aquelo, or abuelo, (corresponding to the Ital. avolo,) coxuelo, ojuelo3. The French has made it eul, but has rarely used it: thus filleul answers to the Ital. figliuolo and the Span. hijuelo. Sometimes the Latin lengthened the termination ulus by a syllable, making it aculus or iculus, as in conaculum, obstaculum, miraculum, auricula, curriculus,

French, to fata Ital., and hada Span.; journée French, to giornata Ital. jornada Span. (see Machiav. Disc. ii. 17, ad init.); vallée Fr., to vallata Ital., and not to valle: as is implied by M. Raynouard, who speaks of "Le mot val roman qui a produit en français vallée." Journ. des Sav. 1823, p. 111.

[[]Diez, Rom. Gr. vol. ii. p. 836.]

² See Niebuhr's *Rome*, vol. i. p. 55. Grimm, vol. iii. p. 696. Scheller's *Latin Grammar*, vol. i. p. 89.

³ See above, p. 67, note 1.

fasciculus, ridiculus, Æquiculus from Æquus¹. terminations were softened by the Ital. into acchio and icchio, as in oculus, occhio, circulus, cerchio, macula, macchia, gracula, gracchia, auricula, orecchia, pariculus, parecchio, speculum, specchio2. The change took place thus, auricula, auricla, aurichia3, cl being softened into chi, as in chiave from clavis, chiostro from claustrum, etc. After these models were formed the Ital, pistacchio, pecchia, (i. e. apicula,) lentecchia, ginocchio, birracchio4; and by a change of acchio and icchio into accio and iccio, fossaccia, mostaccio, cappriccio, pasticcio⁵, fantoccio. termination accio, as is often the case with diminutives. has sometimes in Ital. a contemptuous sense, as donnaccia, giovinaccio, pitturaccia, robaccia. While the Ital. changed the Latin termination iculus or icula into icchia or icchio, the Span. changed it into ejo and eja, the Prov. into el and elha, the French into eil and eille; thus auricula, apicula, oculus, pariculus Lat., orecchia, pecchia,

¹ Niebuhr, vol. i. n. 419, speaking of the Poediculi, says that 'the simpler forms Poedi and Poedici have not been preserved in books.' There is no doubt that the termination in iculus originated in the manner here indicated, and was a double affix: nevertheless in many words the simpler derivative form probably never existed, and it is perhaps as unsafe to infer from Poediculus the existence of a form Poedicus, as to infer from auricula, curriculus, and ridiculus, the existence of such words as aurica, curricus, and ridicus.

² See Muratori in parecchio, and Menage in abbacchiare, which he derives from baculus, and in conocchia, which he makes equivalent to colucula from colus. Also Pasqualini, Vocabolario Siciliano, vol. ii. p. x. xi.

Muratori in serchio. Muratori in v.

⁵ The termination *iccio* sometimes comes from *itius* or *icius*, as *posticcio* from *posticius* (Murat. in v.), *fatticcio* from *facticius*: but in other cases *accio* and *iccio* seem to be slightly modified from *acchio* and *icchio*.

occhio, parrecchio Ital., oreja, abeja, ojo, parejo, Span., aurelha, abelha, huels Prov., oreille, abeille, oeuil, pareil French.

The Latin sometimes augmented the termination ulus by prefixing to it el or il; so that from novus it formed novelulus, from pusus pusilulus. These three syllables were afterwards contracted into two, so as to make ellus or illus, and thus were formed the words novellus, pusillus, miscellus, Sabellus, Terentilla, codicillus, furcilla, etc. The same termination was, however, sometimes produced in a different manner, viz. by the softening of r into l: thus liberulus, miserulus, puerulus, became libellus, misellus, puellus1. Of these two forms in ellus and illus the Ital. made ello, the Span. ello and illo, the Prov. and French el (Gr. Comp. p. 43.) The modern French has changed the termination el into eau: thus instead of the ancient chastel, drapel, faiscel, tonnel, etc., it now says château, drapeau, faisceau, tonneau: the trace of the ancient form is, however, preserved in the inflexions, as cervelle from cervel (cerveau), nouvelle from nouvel (nouveau); and in the derivatives, as niveler from nivel (niveau), chapelier from chapel (chapeau), sceller from scel (sceau), morceler from morcel² (morceau), Bordelais from Bordel (Bordeau), When the French language was introduced into England this change had not been made: hence the English castle, flail, mackerel, morsel, muzzle, tressel tunnel, vessel, etc., correspond to the modern French château, fléau, macquereau, morceau, museau, tréteau, tonneau, vaisseau.

¹ See Grimm, vol. iii. p. 696.

² That is morsel, a little bit (bite) from mors, an old French word from morsus. See Raynouard in Journ. des Savans, 1831, p. 516.

³ The old French had flagel, and also flael, whence our word is taken. It had likewise the word flaeler. On the French termination in el, see Orell, p. 32. [Burguy in flaël.]

This termination has been much used by the modern languages for the formation of new nouns. Sometimes the several languages agree remarkably in forming corresponding derivatives from the same root, as mantello Ital., mantel Span. Prov. and French; martello Ital., martillo Span., martel Prov. and French; vassel Prov., vaisseau French, vascello Ital., which latter form, however, partakes of a variety which will be presently noticed; batello1, agnello, anello, coltello, capello Ital., batel, anillo, cuchillo, cabello Span., batel, agnel, annel, coutel, chapel French. The Italian has substituted several of these derivatives for the ancient underived forms: thus fratello and sorella for frate and sorore2: it has likewise still the power of using ello as a diminutive termination, as ragazzello from ragazzo. Other derivatives of this simple form in Span. are camarilla, corcillo, querilla, ladrillo. lagrimilla, lamparilla, pecadillo, etc.; in French bercel, boissel, chalumel, faiscel, panel3, tombel, troupel. Sometimes the form of this termination became more complicated, as fiumicello, donzello, (domicellus4,) leoncello, madamigella, monticello, vermicello, violoncello, vecchierello, pazzarello Ital.; leoncello, manecilla Span.; lioncel French. Of the same form as leoncello is vascello, noticed above; as also augello or uccello, Ital.6, contracted from avicello,

¹ From bat, boat, Murat. in v.

² Sorella comes from sore, contracted from sorore, as fratello comes from frate, contracted from fratre. The old Ital. writers likewise use sirocchia for sister, i. e. sororcula.

On paneau see Murat. in pania. See Manzoni's notes to Adelchis.

⁵ Leon-cello, violon-cello, etc. do not fall under the same class as the Latin hom-unculus, av-unculus, etc. (Grimm, vol. ii. p. 347,) as the n belongs not to the termination but to the root.

⁶ See Menage in augello, who quotes aucellus, στρουθίον, from an ancient gloss.

like the Span. avecillo: the French oisel arose in a like manner.

Sometimes the French added to the termination el the termination et, of which I shall speak presently: hence having formed oisel from avis, from oisel it formed oiselet; having formed chapel from chap, from chapel it formed chapelet; having formed roitel from roi, from roitel it formed roitelet².

URA, as in censura, junctura, cultura. This termination remained the same in all the modern languages except the French, which as usual changed the final a into e. Several new words were formed with it, as aventura, armadura, verdura Ital., Span., and Prov., aventure, armure, verdure, French, cosidura or cucitura Ital., costura Span., cosdura Prov., coûture French. (Gr. Comp. p. 28.) Other new words of this form are altura, bruttura, cambiatura, caricatura, fatatura, lordura, magagnatura, pianura, paura, seccatura Ital., domadura, embarradura, echadura, enjalbegadura, rebosadura, pavura Span., blessure, coiffure, decoupure, doublure, ferrure, nourriture, ordure, souillure French³.

There are likewise some Romance terminations of nouns adjective derived from the Latin, of which the following may be here noticed.

Ensis, as in forensis. The Italian has preserved the termination under the form ese, as Veronese, Lucchese,

¹ See above, p. 70, note ⁴. Schapel, which occurs several times in the Nibelungen Lied, in the sense of an ornament or covering for the head, is borrowed from the French chapel, and not from chapelet, as is stated by V. Hagen in v.

² [Compare Diez, Rom. Gr. vol. ii. p. 299.]

^{3 [}Diez, Rom. Gr. vol. ii. p. 323.]

paese from pagensis, which in Span is pais, in French pays. It occurs in the derivatives of German roots, as from marke and burg, marchese and borghese Ital., marques Span., marquis and bourgeois French: so likewise cortese Ital., cortes Span and Prov., courtois French. From the old German hardneskja, lorica, (now harnisch,) were formed arnese Ital., arnes Span., harnois French².

Ivus, as in æstivus, fugitivus, captivus, lascivus. The modern languages have formed new adjectives with this termination, as tardivo, distruttivo Ital., destructivo Span., craintif, naif, oisif, pensif, tardif French³.

Osus, as in generosus, formosus, numerosus. The Ital. and Span. made this termination in oso, the Prov. in os, and the French in os or ox, which latter termination it changed first into oux, and then into eux. Thus the Ital. and Span. have formed amoroso, perilloso, maraviglioso, maravilloso, the Prov. amoros, perillos, enuios, saboros, the French amoros, perillos, enuios, merveillos, doutos, envios, which were sometimes written with a final x, as in amorox, perillox, etc. (Gr. Comp. p. 122.) Afterwards the o was changed into ou, so that the termination be-

¹ Muratori in v.

² See Grimm, vol. ii. p. 373, n. [Diez, Rom. Gr. vol. ii. p. 354.]

³ Landor in his Imaginary Conversations, vol. i. p. 212, speaking of the moral inferences to be drawn from the use of words in Italian, says 'Misfortune is criminal: the captive is a wicked man, cattivo.' The same remark applies to the French chetif, whence the English caitiff. Nor does it appear that there is any peculiarity in this transfer of meanings: a prisoner usually became a slave, and there are numerous instances in both Romance and Teutonic languages of a close association of the ideas of slavery and of meanness, cowardice, and moral abasement. Thus the word thraell or thrall meant both a slave and a bad man. See Grimm, Deutsche Rechtsalterthümer, p. 303, 308. Arndt in the Rheinisches Museum, vol. ii. p. 348—52. [Compare Diez, ib., p. 339.]

came ous or oux1: which is still preserved in the word jaloux; and this is the form of the termination in question in modern Provençal, as argentous, cendrillous, famous, pietous, ponderous. Such also was its form when the French language was introduced into England, and hence our adjectives generous, clamorous, callous, famous, vigorous, monstrous, etc. Each language has new words of this form peculiar to itself, as noisso, neghittoso2, ritroso, pensieroso, schizzinoso Ital., guardoso, hastioso, presagioso, primoroso Span., chanceux, fâcheux, heureux, oiseux, nuageux French3.

There are some other terminations of nouns which do not appear to be derived from the Latin, but which are used in all or some of the Romance languages. They are three in number, and of these two evidently spring from a Teutonic source, and the third probably has the same origin.

ARD. This German⁴ termination has been received into the Romance languages, and has served to form a great variety of new nouns, especially in the Ital. and French. Thus bugiardo, (probably from a German root⁵,) azardo, bastardo, bombarda, chiavardo, codardo, (from cauda, a person who lingered at the rear of an army,) gagliardo, infingardo, leardo, maliardo, moscardo, mostarda, saccardo, tabarro, testardo, vecchiardo, Ital., cobarde, gallardo, Span.,

¹ See Rayn. Obs. sur le Roman de Rou, p. 11, 12. Enviouse, gloriouse, delitouse, and amorouz, occur in a poem of Raoul de Coucy, who was killed in 1249, published in Sismondi, Litt. du Midi, vol i. p. 329. Compare Orell, p. 30.

² From negligere, see Muratori in v.

³ [Diez, Rom. Gr. vol. ii. p. 330.]

⁴ See Grimm, vol. ii. p. 339, vol. iii. p. 707.

[•] See Murat. in v. [Diez in bugia.]

campagnard, bavard, babillard, couard, gagliard, billard, brancard, brouillard, fuyard, milliard, pendard, etc. French. Many nouns have likewise been formed with this termination in English, as braggart, drunkard, wizard, haggard, pollard, steward, (from to stow,) custard (from cost, food,) mazzard, froward, etc.¹

ETTO, ITO, ETE, ET; OTTO, OTE, OT. These terminations occur in Ital. in the words boschetto, cavalletto, giovanotto, merlotto, signorotto: in Span. in caballete, senorito, muleto, papeleta, capote: in French in ballet, bonnet, filet, billet, couplet, poulet, sommet, violet, ballot, cachot, chariot, matelot, mignot, poulot. It has been already mentioned that in French et is sometimes added to the termination el, as in agnelet, batelet, bracelet, carrelet, châtelet, rondelet. In cailletel and louvetel (cailleteau and louveteau) this process has been reversed.

In some words these terminations merely serve to form new nouns; in others they have a diminutive sense, as merlotto², senorito, poulet: in Span., however, ote has an augmentative force, as hombrote, capote. Their origin, though it is probably to be found in some Teutonic formative syllable³, is quite obscure.

Asco, esco, isco, esc, esque. In Italian asinesco, Bergamasco, buffonesco, burasca⁴, cagnesco, cavaleresco, Dantesco, duchesco, donnesco, gigantesco, giovanesco, marineresco, naveresco, pittoresco, soldatesco: in Span. borrasca,

¹ [Diez, Rom. Gr. vol. ii, p. 358.]

² Grimm is mistaken, vol. iii. p. 705, in stating that otto in Ital. has an augmentative force: it is always a diminutive, according to Marrini on the *Lamento di Cecco*, p. 106, who gives numerous examples of it.

³ Grimm, vol. iii. p. 702. [Diez, ib. p. 345.]

⁴ See Muratori in v.

gatesco, gigantesco, marisco, Morisco, marinesco, pintoresco, soldadesco, etc.: in Prov. Espanesc, Francesc, Grezesc, Serrazinesc, and joglaresc. Probably the French words of this form, as burlesque, grottesque, gigantesque, pittoresque, are borrowed from the Italian: the two latter, if they had been formed in French, would have been géantesque, peinteuresque; and the roots of the two former, burlo and grotto, are wanting in the same language.

This termination is derived from the German termination in $isch^1$; thus Tedesco in Ital. corresponds to Theotiscus or Theotisch (Teutsch), as fresco was formed from frisch. Thus Arabesco, barbaresco, Turchesco Ital., answer to Arabisch, barbarisch, Türkisch. National names were often formed with this termination in the Romance languages, as they are both in German and English.

Now it cannot be contended that the result of this summary examination of the Romance terminations of nouns by any means necessitates M. Raynouard's hypothesis with respect to the parentage of the living Latin dialects, or indeed is at all favourable to it. We see, indeed, that the different languages subjected the Latin terminations to similar modifications, and used them for similar purposes; but in this fact there is nothing which compels us to suppose that they had anything more in common than their derivation from the Latin. In their corresponding words there is just that degree of resemblance and of difference which might have been expected in languages formed under the same circumstances from the same original. Thus there are some new nouns not derived from the Latin, such as

¹ See Grimm, vol. ii. p. 379. [Diez, Rom. Gr. vol. ii. p. 361.]

those formed with aggio and age from lingua and cor, with ezza, eza, and esse from largus and probus, with one and on from kampf, with tate or tat from bellus, with ura from viridis, which occur in all the languages: sometimes the different languages formed the same root with different terminations, as allegrezza and allegria Ital., alegria Span., alegrage Prov., allégresse French; vicinanza Ital., voisinage French; frescor Prov., freschezza Ital., frescura Span.; schiavitù Ital., esclavage French: sometimes each language had words of the several forms peculiar to itself, of which many examples have been cited above; and sometimes the corresponding words are formed from the differently modified roots belonging to each language, as maritaggio, maridage, and mariage; romitaggio and hermitage; credencia, creencia, and croyance. As these latter words could not have been derived from the same source, but were formed by means of the same terminations from similar roots; it is fair to conclude that the agreement in others where the roots were the same was the effect of chance, and does not necessitate the hypothesis of a common language in which ' these nouns were formed. It is not to be wondered that having the same terminations to work with, and the same roots to work upon, the languages should have often coincided in the new forms. Nor can it be doubted that nations, whose territories lay so near together, which were governed by institutions so closely resembling, between which there was so constant an intercourse, and whose languages had so strict an affinity, should frequently have borrowed words from each other. Under these circumstances such words as omaggio, vassallagio, and other political terms, would naturally pass from one

to another country. The influence of the Church had, moreover, the effect of binding all the Romance nations into a species of federal republic, by making all the clergy members of a community dependent on the See of Rome. And on the whole, such a communication existed between these countries, as rendered it impossible that their cognate languages could have been developed altogether independently of one another.

The similarity of effects produced on language by similar causes, may likewise be perceived in the foreign words introduced into the Romance tongues during the middle ages, such as the derivatives of werra, herberge, wante, harnisch, reim, sclavus, spatha, etc., which probably were in most cases adopted by each language independently of the others. The subject of the non-Latin part of the Romance languages is, however, of sufficient importance to require a separate investigation²; and in this essay I shall confine myself to that which concerns the grammar, without endeavouring to explain that which concerns the dictionary of the modern Latin dialects.

On the influence of the Italian on the French see Muratori, Ant. It. vol. ii. p. 1112, B.

² See note (D) at the end. [Diez, Rom. Gram. vol. i. p. 56-72.]

CHAPTER III.

Degrees of Comparison, Pronouns, and Numerals in the Romance Languages.

§ 1. DEGREES OF COMPARISON.

THE Provençal formed its degrees of comparison by means of the adverb plus: which word prefixed singly to an adjective denoted the comparative, and together with the article, the superlative degree: as bels, plus bels, el plus bels. Sometimes it preserved the Latin inflexion in or for the comparative, as majers, mielhers, gensers, (from gent, gentilis Latin,) ausers (altior¹,) and rarely that in issimus for the superlative, as altismes, altissimus. The superlative might likewise be expressed by means of the article and the Latin comparative: thus 'la genser,' was equivalent to 'la plus genta.' 'Am la plus bella et la meillor;' 'I love the fairest and the best.'

After the comparative degree, the relation between the two things compared is signified by the particle que, (derived from the Latin quam,) as 'plus riex qu'el senher de Marroc,' 'more powerful than the lord of Morocco.' Sometimes the que was omitted between verbs, as

¹ The manner in which the Latin termination in or became er in Provençal, and received a final s, has been explained above, p. 83.

'E am la mais no faz cozin ni oncle:' 'and I love her more (than) I do cousin or uncle.'

Or the preposition might be used before substantives and pronouns, as 'plus fresca de lei,' 'fresher than her;' 'mielhs de mi,' 'better than me;' 'mas de cen,' 'more than a hundred.' M. Raynouard says that this usage was imitated from the Greek, (Gr. Rom. p. 55,) but there seems no reason for supposing that it was borrowed from a language which could not have exercised any influence on the Provençal, or indeed on any of the Romance languages. When two objects are compared, it is natural to say that one is the better, the worse, the more beautiful, etc. of the two; and it is an easy transition to say that one is better of the other: though it is an idiom which our language does not admit, (Gr. Rom. p. 51—8.)

The other Romance languages have in like manner lost the Latin mode of forming the degrees of comparison by inflexion, with the exception of a few words retained from the Latin, as maggiore, maggio, meno, peggiore, peggio, migliore, meglio Ital., mayor, peor, mejor, ménos Span., majeur, meilleur, mieux, pire, moins French: and the Italian and French, like the Provençal, form the comparative with più and plus, the superlative with il più and le plus: while the Spanish uses mas (from magis) for the same purpose. M. Raynouard says that the Provençal alone possesses both plus and mais (Gr. Comp. p. 137,): but he forgets that the Latin equally possesses them both; and the Provencal does not prefix mais, like the Spanish, to adjectives, but uses it only as an adverb of comparison. The Latin termination of the superlative, as has been already remarked, rarely occurs in

Provencal, and M. Raynouard cites a few instances of it in old French, in which language, with the exception of a few relics of the ancient form, such as illustrissime. révérendissime, etc., it is now disused. The Italian and Spanish have, however, preserved the use of this termination, and can annex it to any adjective1: but it has lost its proper superlative meaning, and only has an intensive force: thus 'maximus omnium' would be in Italian 'il più grande di tutti,' while 'vir maximus' would be 'uomo grandissimo.' Wherever it is meant that none possess the quality in an equal degree, the article and the adverb must be used: where it is meant that the subject possesses the quality in a high degree, the termination is proper. The same rule also applies to the Spanish. It should be remarked that in the retention of the superlative termination, the latter languages have adhered more closely than the Provençal to the Latin.

The employment of que after comparatives, and of de before substantives and pronouns, occurs in all the Romance languages; and of the suppression of che before verbs M. Raynouard gives some instances from old Italian: as 'E piò soave dorme in vile e picciol letto . . . no face segnore en grande e caro suo: 'Guit. d' Arezzo, Lett. I. p. 4². (Gr. Comp. p. 137—42.)

¹ The Italian only preserved the Latin termination in issimus: it has, however, retained some Latin superlatives of a different formation, as ottimo, pessimo, minimo, infimo, supremo, acerrimo, celeberrimo. These are collected by Biagioli, Gr. Ital. p. 62, who, however, ought not to have called benissimo a Latin superlative.

² This construction resembles the vulgar English idiom, 'better nor me,' 'older nor him,' etc.

la was used.

§ 2. PRONOUNS.

The Provençal personal pronouns have for the most part only two cases in the singular, and one in the plural number, distinguished by the termination: the others are formed by prepositions. They are as follows:

SINGULAR.	Plural.	
Nom. eu, ieu, me, mi Acc. me, mi	nos	
Nom. tu Acc. tu, te, ti		
MA	.8C.	
Nom. il, el Acc. il, el, lo, li, lui	il, els els, los, li: lor only after de or a	
Fx	. ·	
SINGULAR.	PLURAL.	
Nom. ella, il, lei, leis Acc. la, lei, leis after a and de ella and not	ellas las after a and de ellas or lor	

Se and si were used either in the singular or the plural, either in the nominative or accusative case, and with the prepositions de and a, (Gr. Rom. p. 59—86.)

and not las was used.

In these forms the greatest confusion prevails: while me and mi are used in the nom. case, together with eu derived from ego, tu is used in the acc. case, together with te and ti: although eu is never the accusative, or te the nominative. Il, el, and ella, in the nom. singular come from ille and illa: il, el, lo, ella, and la, in the ob-

lique case are formed from illum and illam: li, lui, lei, and leis¹ from illi. The two latter feminine forms are likewise used as nominatives. In the nom. plural, il, els, and ellas, come from illi, illos, and illas; while lor, common to both genders, is derived from illorum. Li from illi nom. was transferred to the oblique case plural, as lei from illi dat. was transferred to the nom. singular.

To the personal pronouns were sometimes joined in the Provençal other pronouns, which had the effect of giving additional force to the affirmation; such as eis, (from ipse,) mezies, (the origin of which word will be explained presently,) and altres. Thus 'elh eis dieus la fetz,' 'God himself made her,' 'ille ipse Deus;' 'ab qu'el mezeis se balaya,' 'with which he himself flogs himself;' 'de se mezeis nos fe do,' 'he made us a gift of himself;' 'son ves els mezeis trachor,' 'they are traitors towards themselves.' Altre is only joined to nos and vos: thus 'Et afermi que mays valh Mahomet que ton Xrist loqual vos autres adoratz;' 'and I affirm that Mahomet is worth more than thy Christ whom you adore.'

En and ne were used in Provençal to mean, of him, her, it, them; i, y, and hi, to mean, to him, her, it, them. Although (says M. Raynouard) en and ne derived from inde, and i, y, or hi derived from ibi, ought only to have been used for the pronoun when they signified inanimate things, yet the Provençal used them to signify persons, both in the singular and plural, and both masculine and feminine, (Gr. Rom. p. 86.)

The modifications of the Latin personal pronouns made by the Provençal reappear, for the most part, in

¹ On this final s see below, ch. v. § 1.

the other Romance languages. The old Italian eo and the modern io, the Spanish yo, and the old French ieo. have retained the o of the Latin ego, which has become u in the Provencal. The use of mi in the nominative appears likewise to have anciently existed in Italian and Portuguese¹: but that of tu in the acc. is peculiar to the Provençal. The Italian, from its intolerance of final consonants, has changed nos and vos into noi and voi?: 'notwithstanding which (says M. Raynouard) the Romance (i. e. Provençal) nos and vos appear in Italian ioined with the preposition co,' (Gr. Comp. p. 148,): a singular assertion; for in the first place, nos and vos are as much Latin as Provencal, and if they were the common forms in Italian would not prove any connexion with the Provençal, and secondly, nosco and vosco are evidently contracted from nobiscum and vobiscum, forms of which there is no trace in the Provençal or any other Romance language.

It is remarkable that the practice of adding alter to nos and vos, occurs in all the Romance languages, and in Spanish particularly it has become inseparably joined to those pronouns, so that nosotros and vosotros are the common forms for the nom. case, nos and vos being reserved for the accusative.

With regard to the derivatives of the pronoun ille, it

On the tendency to substitute the accusative for the nominative, as being more emphatic, some remarks have been already made, above, pp. 90, 91, and the same explanation probably applies to such expressions as 'io mi sono,' 'io non so ch'io mi dica o ch'io mi faccia' (Boccaccio), 'io mi vivea' (Petrarch), which occur in old Italian: the mi was doubtless added in order to give force to the affirmation, and afterwards might be used merely from habit, (see Gr. Comp. p. 146.)

² Vi. the accusative, appears to be merely a contraction of voi.

is to be observed that from this word all the Romance languages have formed their definite article1; and it is curious to observe how each language has chosen different forms, originally synonymous, to distinguish the one sense from the other. The Provencal used el as an article, and both el and il as the pronoun: the Italian originally used both el and il as the article, and el as the pronoun: the latter has now substituted egli, apparently from illi, as the Prov. used lei also from illi in the feminine gender. The Provençal used both el and lo (from illum) as the nom. of the article, but lo as a pronoun was only acc. The old French used both el and lo as the article, and lo as the accusative of the pronoun: but it has since disused el as an article, for which it uses le (lo,) and has retained il only as the nom. of the pronoun. Lei, though derived from illi the Latin dative, was used in old Italian, as well as in the Provençal, as a nom.: thus Petrarch.

> E ho sì avezza La mente a contemplar sola costei Ch' altro non vede, e cio, che non è *lei*, Già per antica usanza odia e disprezza.

(See other instances in Gr. Comp. p. 155.) The same idiom is still retained in Italian in the language of conversation. With regard to li, los, ellas in Italian and Spanish, the same observation applies as to li, los, and las, the plural of the article; and lor, which in the Italian loro retains one more letter of illorum, does not

¹ Except the Sardinian dialect, in which the definite article is so, sa, from ipse: Raynouard, vol. i. p. 41. For the definite article in the Romance languages, see above, p. 56.

appear as a personal pronoun in Spanish and Portuguese.

The Provençal use of se occurs in all the other languages, of en and ne in French, of ne in Italian, and of i or y in all, (Gr. Comp. p. 143—58.)

The Provençal moreover often omitted the vowels of its personal pronouns, and affixed the remaining consonant or consonants to the preceding word: thus me, ti, se, nos, vos, were represented by m, t, s, ns, us: thus we find 'No sai en qual guiza-m¹ fui natz,' 'I know not in what guise I was born.' 'Per aisso-t tem amors,' 'For this I fear thee, Love.' 'Mos coratges no-s pot partir de vos,' 'my heart cannot part itself from you.' 'Lo jorn que-ns ac amor amdos eletz,' 'the day that love had chosen us both.' 'Tolre no-m podetz que no-us am,' 'You cannot prevent me from loving you.' N is likewise used as an affix for ne or en, (Gr. Rom. p. 91—5.) In poetry the pronoun was necessarily affixed to the preceding word, and could not be used in its uncontracted form².

This remarkable system of affixed pronouns occurs in old French, and is still preserved in some of the French patois: it was likewise very prevalent in old Spanish: but there is no trace of its existence either in Portuguese or Italian, though it still prevails in many of the dialects of Upper Italy, (Gr. Comp. p. 158—61, 402.)

The declension of the possessive pronouns has been

¹ In the manuscripts the affixed pronouns are written as part of the word with which they are in pronunciation combined. I have separated them (after Schlegel and Diez) with a hyphen for the sake of clearness.

² See Raynouard in the Journal des Savans, 1831, p. 348.

already given', and it only remains to be remarked that lor Prov. as not being derived from a word declinable in Latin, is itself indeclinable. The Provençal having obtained an article, naturally employed it before possessive pronouns used substantively, as in Greek: thus 'E non es benestan qu'hom eys los sieus aucia,' 'and it is not good that man should kill even his own.' 'Vos e'lhs vostres foratz totz mortz,' 'You and yours would be all dead,' (Gr. Rom. p. 96—116.)

The Provençal demonstrative pronouns are cel, aicel, aquel, est, cest, aquest. The three first appear to be compounded of hic or hicce, and ille; est, from iste, compounded with the same word, likewise appears to have made cest and aquest. The following is the declension of these words:

		SINGULAR.		
	MASC.		Fem.	
and	cel, celui aicel aquel	Nom.	cella, cil aicella, aicil aquella, aquil	
		· Acc.	cella, celleis aicela aquella, aquelleis	
	est cest aquest	Nom.	esta, ist cesta, cist aquesta, aquist	
		Acc.	esta cesta aquesta	

¹ See above, p. 78.

PLURAL.

	1 11	INAL.	
1	Masc.		FEM.
Nom.	cil, cels aicil, aicels aquil, aquels		cellas aicellas aquellas
Acc.	cels aicels aquels		
Nom.	ist, est cist, cest aquist, aquest		estas cestas aquestas
Acc.	ests cests aquests		

The remarks above made on the personal pronoun el apply with little variation to these forms. It will be observed that celui masc. from illi dat. is used in all the cases, though celleis and aquelleis fem., derived from the same case, are never nominatives. Moreover cil, aicil, aquil, ist, cist, and aquist, are used as nom. feminines, though in the acc. the final a is never omitted: probably because the former are derived from illa and ista, the latter from illam and istam. Besides these masculine and feminine forms, aisso, so, and aquo, are the neuter forms: they appear to have retained their final o on account of the u in the neuter ipsum and illud, which does not appear in the other genders, (Gr. Rom. p. 117—131.) So likewise in Spanish aquel is masculine and aquello neuter, Gr. Comp. p. 175.)

Nearly all these pronouns with their variations occur in the different languages. The Italian uses only the abbreviated form quello, which M. Raynouard compares with aicel and aquel, but which seems rather to correspond with cel, while the Spanish has not the shorter form, but only uses aquel, (Gr. Comp. p. 171—6.)

Of the Provençal relative pronouns it is only necessary to mention qui, which is used in the nom. and acc., both as masc. and fem. Que (derived from quod) is used in all cases, and as both masc. and fem.: and it is alone used after neuter demonstrative pronouns. Qui and cui sometimes perform the function of genitives, datives, and ablatives: cui, however, is commonly preceded by a preposition, which che always requires.

Don, derived from de unde, and indeclinable, had the sense of whence, whose, by or from whom. On, from unde, meant where, to whom, in whom.

The Provençal used another pronoun relative formed by prefixing the article to qualis: viz. lo qual, la qual, los quals, etc.

In Provençal, as in Latin, the antecedent is often understood: thus 'no say que dire,' 'nescio quid dicam.' 'Trobat avem qu' anam queren.' 'Invenimus quod quærimus,' etc. 'Qui en gaug semena, plazer cuelh,' '(He) who sows in joy, reaps pleasure.' 'La premiera ley demostra a qui ha sen e raczon,' 'The first law proves to (him) who has sense and reason.' 'Ai cum par franch e de bon aire qui l'au parlar,' 'Ah, how frank and debonair she appears (to him) who hears her speak.' Sometimes, on the other hand, the antecedent being a substantive, and not a pronoun, the relative was suppressed, particularly in poetry: thus 'Car anc no vi dona tan mi plagues,' 'For never saw I lady (who) pleased me so much,' (Gr. Rom. p. 131—43.)

The corruptions of the Latin qui appear with little

difference in the other languages, which likewise sometimes suppress the antecedent, and rarely the relative. Onde in Ital. has retained the form of the Latin unde more faithfully than the Prov. on: it has, however, occasionally the sense of a relative pronoun, which it has obtained by the same process of abstraction which has rejected the notion of time in the prepositions de and ad, as used in the Romance languages to express the relation of the genitive and dative cases, and in the verb venire, when used as an auxiliary verb, equivalent to essere, in Italian. Dont likewise remains in French as a relative pronoun, and in old Italian and Spanish donde and don had the same sense, (Gr. Comp. 176—86.)

Of the Provençal indefinite pronouns, the first to be noticed is hom, or om, from the Latin homo, which, followed by the verb in the singular number, had a distributive sense, and signified mankind in general, or a large number of people. Thus 'Hom ditz che gaug non es senes amor,' 'Man says (i.e. it is said) that there is no joy without love.' This very convenient idiom (which our language unfortunately wants) seems to have been introduced into the Romance languages by the Germans. who used the substantive man in this manner. In French. as is well known, this use of on is very prevalent; which word in ancient times was spelt very variously, retaining sometimes evident traces of its original form, viz. hom, hon, hum, om, um, on. The Italian1, Spanish, and Portuguese, formerly used uomo, omne, and ome, in the same manner: but in them this idiom has now become obsolete. (Gr. Comp. p. 187—9.)

¹ See Menage, Etym. Ital. in uom dice.

The Provençal had two pronouns quecx, and usquecx, signifying whoever, every-one, derived from quisque and unusquisque; but no other Romance language had any derivatives of these words.

Cadauns or caduns, cac, cascuns, meant everyone; alcuns, some one; nuls, neguns, deguns, nessuns, no one. Of these words cadauns or caduns appears to have been formed from quotus unus or quotunus, cac and cascuns1 from quisque and quisque unus (unusquisque): alcuns was formed from aliquis unus, like alicubi in Latin from aliquo ubi: nuls from nullus, neguns and perhaps nessunse from nec unus. The origin of deguns, unless it was a corruption of neguns, does not appear. Being derived from Latin pronouns in us, they were declined according to the rules given above: thus nom. cascuns or cascus, cascuna; acc. cascun, cascuna. Cada or cad is sometimes used in the sense of every: thus 'A Carduel una pentecosta On cad an gran pobels s'ajosta,' 'At Carduel, an Easter, where every year many people assemble': in which passage cad an appears to answer to the Latin quot annis, both in form and meaning. Cada has the same sense both in Italian and Spanish's. The French has it not, but only chasque, which, like the Provençal cac, probably comes from quisque; and chascun, which, as well as ciascuno Ital., probably comes from quisque unus. The Italian likewise

¹ If cac came from quisque, it would be the same word as quecz mentioned above, without the final x or s.

² There are instances in Provençal of the confusion of the final c and s: see below, ch. v. § 1. Muratori in v. derives nessuno from nescio unum, without any probability.

³ The Spanish nada and nadie appear to be allied to cada: but I am unable to offer even a conjecture as to their origin.

has cadauno, compounded of cada¹. Every language has the derivatives of aliquis-unus and nullus: but the Italian and French have neuno and neun formed from ne unus, as well as nessuno and nesun from nec unus: the Spanish alone has from nec unus made ninguno, like the Provençal neguns². The Portuguese had nenhum.

From alter the Prov. made altres or altre declined, altrui undeclined, (which appears to have been formed from the dative alteri, like lui from illi, costui Ital. from isti;) and lastly by contraction al. The other languages likewise have these forms, and particularly al, which (sometimes changed into el) occurs in old French, is still used in Spanish and Portuguese, and appears in some Italian words, as alsi.

Eis, eissa, meteis, metissa, signifying self or own, were used after all persons: thus 'Eu eis mi son traire,' 'I am a traitor to myself,' (ego ipse mihi sum traditor.) 'En eysa la semana,' 'in the very week.' 'Per mo mezeis follatge,' 'through my own folly.' 'Altresi com la candela Que si meteissa destrui,' 'like the candle which destroys itself.'

Eis, es, or eps, (as it is sometimes written in the more ancient monuments of the Provençal,) is derived from ipse³. Meteis (sometimes written medeis or medes, mezeis,

¹ Catauno occurs in an ancient Italian letter published by Muratori, Diss. It. vol. ii. p. 1047, E. [See Diez in cadauno.]

² See Grimm, vol. iii. p. 70 note. It will be observed that all the Romance languages have lost the Latin nemo.

³ Ips or eps (the corruptions of ipse) sometimes became eis, and sometimes es. From the latter of these forms came the compounds des and ades, from the former the compounds neis and anceis, (Gr. Rom. p. 251,) as will be shown below, ch. v. §. 2. On isso and esso in Italian derived from ipse, see Perticari, Dif. di Dante, c. 13, vol. i. p. 321. Muratori, Diss. 32, vol. ii. p. 991, B.

and messeis) is evidently formed by the composition of eis with the emphatic particle met, which is subjoined to the Latin personal pronouns: thus the latter example would be word for word in Latin, 'velut candela quæ se met ipsam destruit.' When the suffix had been detached from the pronoun to which it belongs, and permanently prefixed to the following word, it is no wonder that the compound thus formed should be used without a pronoun immediately before it, as when it occurs as an adverb in the sense of even. It is remarkable that all the other Romance languages should agree in this peculiar corruption, although they have taken for their type the Latin superlative of ipse, and from met-ipsissimus have formed medesimo Ital., mismo Span., mesme French¹.

From the Latin totus the Provençal made tots or totz, declined according to the rule given above: it was sometimes compounded with the adverb tras, or tres, very; making trastotz, which had a stronger sense than the simple word. Tras (as will be mentioned below²) appears to be derived from extra by the addition of s and the suppression of the first syllable. The old French likewise had the compound trestoz or trestout. It is remarkable that the Latin word omnis was abandoned in all the Romance languages (except the Italian, which has ogni) and totus substituted for it.

From the Latin multus are derived the Ital. molto, the Prov. molts, the French molt, mult, or moult, and the Port. muito. From the German manch are derived the Prov. mantz or maintz, the French maint, and the Ital.

[·] See Menage and Muratori in medesimo, Grimm, vol. iii. p. 13. [Burguy, Gr. de la Langue d'Oil, vol. i. p. 179.]

2 Ch. v. s. 2.

manto. The Span. instead of these words has mucho, which M. Raynouard derives from multus, but which appears to be of Teutonic origin, and to be derived from an ancient word preserved in the English much, (mik-ils Goth., mik-il old H. German¹.) Plusor, formed from plus, appears in the Ital., Prov., and French: in Span. and Port. it is wanting. On the derivatives of talis and qualis, tantus and quantus, it is unnecessary to make any remark, (Gr. Rom. p. 145—60. Gr. Comp. p. 186—96.)

§ 3. NUMERALS.

The cardinal numbers of the Provencal, which will furnish an easy means of comparison for the different languages, are as follows: uns or us, dui, trei, quatre, cinq. sex and sei, set, och and ot, nov, deze and dex, unze, doze, treze, quatorze, quinze, setze, vint, trenta, quaranta, cent, The ordinal numbers are premiers, segons, ters, quarts, quints, seizens, setens, ochens, novens, dezens, unzens, dotzens, trezens, quatorzens, quinzins, sezemes, vintesmes, trentesmes, quarantesmes, centes, milles. Of these forms uns or us was declined like the adjectives bons or bos: dui was nom. masc., dos acc. masc., and doas was fem. of both The Prov. likewise used ams masc. and ambas fem. from ambo: by combining which word with dui it formed likewise the compound ambedui or amdui. declined like dui. Trei is nom. masc., and tres acc. masc. and also fem, of both cases. In the other cardinal numbers, the Prov., like the Latin, made no distinction of

¹ See Grimm, vol. iii. p. 608, 610.

cases. The ordinal numbers were declined like adjectives of both genders in s, except ters, which (as being contracted from tert-ius) was invariable in the masc. gender, and in the fem. made tersa. It is to be observed, moreover, that segons made in the fem. segonda; centes, centesma; milles, millesma: the fem. retaining in the middle the letter which had dropped from the masc. where it was a final; as in the French beau, belle, etcl. This was also the case with the ordinals in ens, of which the masc. was commonly in es, the fem. in ena, as seizes, seizena. Several ordinals had the termination esmes, as well as ens, thus sezesmes, as well as seizens, (Gr. Rom. p. 161—6.)

On comparing the numerals in the other Romance languages with the Prov. forms, it will be observed that the Ital., in deriving quattro from quattuor, otto from octo, undici, dodici, etc. from undecim, duodecim, etc. kept nearer to the Latin than did the Prov., which made quatre, ot, unze, doze, etc. It is inconceivable, as has been already remarked in a similar case, that the Latin quattuor, octo, and undecim, should first have been contracted or attenuated into quatre, ot, and unze, and then restored to quattro, otto, and undici. The old French used the cases dui and dos, like the Prov., as also the compound ambedui or embedui: it likewise distinguished between troi and tres for the nom. and acc., (Gr. Comp. p. 198—9.)

The first of the ordinals the Prov. took not from the Latin *primus*, but from *primarius*; in which it has been imitated by the French: the Ital. and Span., though they have *primiero* and *primero* from *primarius*, never-

^{&#}x27; See above, p. 138.

theless use primo from primus as their ordinal. In the derivatives of secundus, tertius, quartus, and quintus, (except that the Spanish makes tercero from tertiarius,) all the languages agree. At this point, however, a disagreement takes place: for whereas the Ital. and Span. use the derivatives of the common Latin forms sextus, septimus, octavus, nonus, decimus, undecimus, duodecimus; the Prov. used the termination perceptible in the less common Latin forms septenus, octonus, novenus, denus, etc. to form ordinals of its own, by which means it made seizen, seten, ochen, etc. from sei, set, och, etc.

It is a singular circumstance that all the Romance languages should agree in deviating from the Latin with regard to the formation of the three numerals before twenty. The Latin forms all its cardinal numbers from eleven to nineteen inclusive, by annexing decem to the unit number: thus undecim, duodecim, tredecim, etc. to novendecim. The modern languages follow the same rule till they come to seventeen, when instead of affixing the word ten to the unit number, they reverse the order of the words, and to correspond to septendecim, octodecim, novendecim, we have in Prov. deze set, deze ot, deze nov²;

¹ There is this difference between the Greek and Latin with its dialects on the one hand, and the Teutonic languages on the other, that in the former the numerals eleven and twelve are compounded of one and two and the word ten: whereas in the latter they are derivatives of one and two, and the word ten does not enter into them. Thus ενδεκα and undecim, δυώδεκα and duodecim: but eilf and zwelf or zwölf from ein and zwel or zwo. Andlesen Goth. and einles or endles old H. Germ. show the relation of eilf to eleven. See Meidinger's Dictionary, p. 507.

² At least I suppose that this is M. Raynouard's meaning, as he omits the numerals between sixteen and twenty, (Gr. Rom. p. 161.)

in Ital. diciasette, diciotto, diciannove: in Span. diez y siete, diez y ocho, diez y neuve; in French dix sept, dix huit, dix neuf. The change is the same as if in English after saying thirteen, fourteen, fifteen, sixteen, we were to proceed tenseven, teneight, tennine.

CHAPTER IV.

Formation, Conjugation, and Syntax of Verbs in the Romance Languages.

§ 1. FORMATION AND CONJUGATION OF VERBS.

THE Provençal verbs are arranged by M. Raynouard in three conjugations, viz. those whose infinitive mood ends in ar, in er or re, and ir or ire. The Provençal has three auxiliary verbs, aver from the Latin habere, esser from the Latin esse, and estar from the Latin stare.

The Latin had itself degenerated from the more perfect type of conjugation preserved in the Greek verb, and had admitted the use of an auxiliary verb in some tenses of the passive voice: the use of the auxiliary verb was, however, much extended in the Romance languages by the influence of the Germans, who, accustomed to this method of conjugation in their own language, and misunderstanding or not knowing the force of the Latin terminations, employed the easier method of compounding a tense out of an auxiliary verb and the past participle. Nevertheless it is to be observed that in the active voice all, or nearly all, the Latin tenses were preserved, and the compound tenses of the Romance languages were added to those of the Latin verb, and not substituted for them.

¹ On the use of stare for esse in Latin see Menage, Orig. Ital. in v.

I will now set down the conjugations of the three Provençal auxiliary verbs, omitting the compound tenses.

Infin.	esser	estar	aver
Pres. Part.	essens	estans	avens
Past Part.		estatz	agutz
Gerund	essen	estan	aven

INDICATIVE MOOD.

Present.

son, soi, sui	estai, au	ai

Imperfect.

fos	estes	agues
fosses	esses	esses
fos	es	es
fossem	essem	essem
fossetz	essetz	essetz
fossen, on	essen, esson	essen, esso

It will be time to speak generally of the relation which the Provençal system of conjugation bears to that of the Latin and the other Romance languages, when we come to the three regular conjugations: here I shall only mention those circumstances which are peculiar to the three auxiliary verbs.

The three auxiliary verbs occur in all the Romance languages: the French alone has not the infinitive formed from esse, (essere Ital., esser Prov., ser Span.;) être being the modern form of ester, from estar: so likewise ested, the ancient French participle from estat, became first esté, and then été. All the modern languages agree in changing the b of habere into v: but this change is so common as not to have anything remarkable. M. Raynouard goes regularly through every tense, comparing the Provençal forms with those of the other languages, and in many places he shows that the Italian and Spanish anciently used forms more resembling the Provençal than those now in use: for the most part, however, there is nothing worthy of notice in these coincidences: thus the Italian formerly said avemo, and not abbiamo, which is nearer to the Latin habemus; eramo, and not eravamo, which is nearer to the Latin eramus: so likewise instead of f u it said, like the Provençal, f o: but the vowels uand o are so frequently interchanged in Italian that this variation is of no importance.

It is to be observed that the Provençal, like the French, declines the verb être with the auxiliary aver, as ai estatz, j'ai été; while the Italian declines stare with the verb essere, as sono stato.

The conjugations of the regular verbs, which have been mentioned above, are as follows:

Infin.	amar	temer	sentir
Pres. Part.	amans	temens	sentens
Past. Part.	amatz	temutz, sutz	sentitz
Gerund	aman	temen	senten

CHAPTER IV.

INDICATIVE MOOD.

ames	temes	sentis
esses	esses	esses
es	es	is
essem	essem	issem
essetz	essetz	issetz
essen, esson	essen	issen, on

On comparing with this scheme of the Provençal verbs the conjugations of the Italian and Spanish verbs, analogous remarks to those already made on the terminations of nouns naturally suggest themselves. In almost all instances the Provençal cut off or contracted the final syllable of the Latin word: thus from amare it made amar, from amo it made am, from amamus it made aman, from amasti it made amest, from amando it made aman: the Italian, however, where the Latin word ended with a vowel, retained it unchanged, as amare, amo, amasti, amando; where the Latin word ended in us, instead, like the Provençal, of omitting altogether the final syllable,

it only rejected the s. and changed the u into o. as amamus amiamo, amabamus amavamo, like littus lido, pondus pondo, subtus sotto, etc. The Spanish in some respects adhered less closely than the Italian to the Latin: thus it made the infinit. amar: and in the second person sing. of the preterite it made amaste, and not amasti: it retained, however, the final o in the first person sing. of the present, as amo, and in the gerund, as amando, and in the first person plural it only changed us into os, as amamos, amabamos. Now it is inconceivable that this close adherence to the Latin should have been accidental, and that the Latin terminations should be preserved in the Italian and Spanish, if these languages had been derived from the Provencal, in which all the terminations in question had been cut off. Nobody can believe that amare, amo, amasti, and amando, were first contracted into amar, am, amast, and aman, and then restored, by accident, for the sake of euphony, to their original forms: that amamus was changed into amam, and then lengthened into amiamo and amamos. These differences between the Provencal and the Italian and Spanish, pervading every tense of every verb, make it evident that the latter languages did not pass through the alembic of the former language in the process of their transmutation from the Latin.

The only instances in which the Italian appears to have arbitrarily added to its verbs a final vowel for the sake of euphony, are the third persons plural, such as amano, amavano, amarono, lengthened from aman, amavan, amaron, (the contractions of amant, amabant, amarunt,) which are the only forms used in Spanish: and in the third persons singular of the preterite in ette, thus stetit

and dedit, having been contracted into stet and det, were lengthened into stette and dette, (Gr. Comp. p. 252.) The Italian likewise having changed sum as well as sunt into son, added to it the euphonic o, both in the first and third person.

The most remarkable divergence from the Latin verb, and one in which all the Romance languages agree, is in the future tense, as may be seen from the following table.

Latin.	Ital.	Span.	Prov.	French.
amabo	\mathbf{a} mer $\grave{\mathbf{o}}$	amaré	amarai	aimerai
${f timebo}$	\mathbf{temer} ò	temeré	temerai	
sentiam	sentirò	sentiré	sentirai	sentirai

The Latin has two modes of forming its future active, one for the two first conjugations by adding bo, and another for the two last conjugations by adding am to the characteristic letter: thus ama-bo, time-bo, reg-am, senti-am. In its derivative languages, both these modes of formation have been lost, and in their place a single termination has been substituted, viz. r followed by a vowel or diphthong. There is no trace of the formation of the Latin future by this consonant, except in ero, the future of the verb esse.

M. Raynouard supposes that the modern futures have been formed by annexing the present tense of avere, haber, aver, or avoir, to the infinitive mood of each verb, and in proof of this assertion he cites several passages where the infinitive mood of the auxiliary verb is in the Provençal separated by the interposition of another word: thus 'Et quant cobrat l'avran, tornar l'an e so poder per fe e senes engan,' where the French exactly renders this idiom:

'Et quand recouvré l'auront, tourner l'ont en son pouvoir par foi et sans tromperie.'

So likewise in poems of the Troubadours; 'E si li platz, alberguar m'a' 'and if it pleases him, he has to lodge me.'

E pos mon cor non aus dir a rescos, Pregar vos ai, s' en aus, en ma chansos.

'And since I do not dare to express my wish in secret, I have to entreat you, if I dare, in my song.'

> Amarai? oc; si li platz ni l'es gens, E si nol platz, amar l'ai eissamen.

'Shall I love? Yes; if it pleases her and she is kind, and if it does not please her, I have to love her (i. e. I will love her) equally.'

In Provençal, too, the verbs aver and esser, with the preposition a before another verb, were used to express the future: as 'ab lievs ai a guerir,' 'with her I have to recover:' i.e. 'I shall recover.' 'A l'advenement del qual tuit an a ressuscitar,' 'at whose coming all have to rise again:' i.e. 'all will rise again.' 'Tem que m'er a morir,' 'I fear it will be to me to die,' i.e. 'I fear I shall die, (Gr. Rom. p. 221—2. comp. vol. i. p. 70, 81. Gr. Comp. p. 206.)

Of these idioms the latter occurs, though with a sense not so closely allied to the future, in all the Romance languages: of the former, examples are to be found only in the Spanish and Portuguese; in the Italian and French this usage does not appear ever to have prevailed. The following are examples from the Spanish: 'Non te diran Jacob, mas decir te han Israel.' 'Castigar los hé como

avran á far.' 'Haber les hemos como alevosos perjurados,' (Gr. Comp. p. 297—81.)

These examples appear to prove the truth of M. Raynouard's assertion with respect to the origin of the Romance future; as becomes more evident by comparing the future tense in each language with the modern present tense of habere: thus

Ital.	Span.	Prov.	French.
ho	\mathbf{he}	ai	ai
amer ò	amar é	amar ai	aimer ai
perder ò	perder é	perder ai	perdr ai
sentir ò	sentir é	sentir ai	sentir ai

In old Italian, moreover, haggio and abbo were used for ho, (i.e. habeo,) as the first person of the present tense of havere: and thus we likewise find futures in aggio and abbo, as faraggio, veniraggio, diraggio, torrabbo².

When this form had once been established in the active verb, it was transferred to the auxiliary verbs, so that the verb *habere* was inflected by itself, (*Gr. Comp.* p. 206³.)

¹ This origin of the Romance future is doubted, upon insufficient grounds, by Ampère, *Hist. de la Litt. Fr.* p. 160.

² See this fully explained by Castelvetro on Bembo, vol. ii. p. 203—5: compare Perticari, vol. i. p. 302, note 7, to col. 2. Galvani, Poesie dei Trovatori, p. 36, n. 1. Lanzi, Lingua Etrusca, vol. i. p. 338.

³ The story which M. Raynouard cites from Aimoin, *De Gestis Francorum*, ii. 5, about Dara taking its name from the Emperor Justinian saying *Daras*, (thou shalt give,) and which he calls 'a *fact* difficult to explain,' (vol. i. p. x.) is, as Schlegel has remarked, evidently an etymological fable, (p. 45, 102,) like those which the Greeks so often invented about the origin of their cities, and not more authentic than the derivation of the name of Britain from Brutus the grandson of Æneas. [This city of Mesopotamia is called *Doras* in *Pasch. Chron.* vol. i. p. 608, ed. Bonn. and Malalas, p. 399, ed. Bonn.

As the future tense was formed by means of the present tense, so the conditional was probably formed by means of the imperfect, of habere: in Spanish some instances occur where this tense is, as it were, analysed into its component parts; as 'dexar me ias con el sola;' 'E mas pechere me hia en pia diez mil maravedis;' 'Pechar nos ya toda aquella pena,' (Gr. Comp. p. 278.) All the languages except the French have a double form of this tense.

Ital.	Span.	Prov.	French.
amerei	amara	amera	aimerei
ameria	amaria	amaria	
perderei	perdiera	perdera	perdereie
perderia	perderia	perderia	
sentirei sentiria	sentiera sentiria	sentiria	sentireie

The simple forms in ara and era appear to be corrupted from the Latin amarem, perderem, sentirem: the form in ia M. Raynouard considers as taken from avia, (aveie in French,) the imperfect of avere. Nor would there be any doubt about this derivation, if it were certain that ia ever had the force of avia, and that such is its meaning in the passages quoted above from the Spanish. The Italian form in ei, however, is evidently borrowed, not from the imperfect, but from the preterite, of avere, ebbi, anciently ei, as may be seen from the inflexion of the different

in which passages it is said to have received its name, from being the place where Alexander the Great conquered Darius with the spear $(\delta \delta \rho \nu)$. Aimoin, a French Benedictine monk, was born about 950, and died in 1008 A.D. His History of the Franks abounds in fables. The reign of Justinian terminated in 565 A.D. Concerning the town in question, see Dr. Smith's Dict. of Anc. Geogr. art. Daras.]

persons¹. The Venetian dialect has vorave, sarave, for vorrei, sarei, etc., which more distinctly shows the Latin habui². Parrave for parrebbe was used by Dante da Majano³.

With regard to the other tenses of the regular verbs in the Italian and Spanish, and their relation to the Latin and Provençal, there is nothing which calls for particular notice. The formation of the French verb, however, having undergone more changes, and having departed further from its original type, requires a more detailed explanation.

The final s now added to the first and third persons of the present, to the second person of the imperative, and to the first person plural, of the French verb, formerly did not exist: and those tenses which have now ois as the termination of the first and second persons singular, originally made eie or oie in the first, and eies or oies in the second person: thus je mand, je voi, je regard, je bais, il aim, il chant, pren-tu, fui-t-en, nous avum, nous devum, nous parlum, nous prion, nous gardon, j'aveie, je fereie, je soie, j'estoie, tu saveies, tu consenteies, tu devoies, tu tenoies. In these respects the French verb approached nearer to the Latin and Provençal forms (Gr. Comp. 225—38.)

The French imperfect has undergone remarkable changes: amabam, the Latin form of the first conjugation, first, by a slight modification, as in the other languages became amava: then the internal a was, as in other French words, changed into o, and the final a underwent the regular change into the e muet: by which means amava

¹ Castelvetro on Bembo, vol. ii. p. 224.

² Denina, in the Mém. de l'Acad. de Berlin, 1797, p. 76.

³ Castelvetro, ibid.

became amoue¹. M. Raynouard cites many examples of this form; as je crioue, je parlowe, je quidoue, tu parloes, il cuveitoue, ils alouent, ils contrariowent, ils errouent; afterwards u was changed into i, so that amoue became amoie: the final e was then suppressed, when the imperative was written j'estoy, j'escoutoy, and lastly, a final s was added, which brought it to its present form. The other forms of the Latin imperfect, ebam and ibam, appear to have been changed in French, as in Provençal, into ia, then ie, eie, or oie, then oi, and lastly into ois: by which means the termination of the imperfect became uniform in all the conjugations, (Gr. Comp. p. 244—8, 271.)

In the preterite of the first conjugation the French has adhered more closely than the Provençal to the Latin original, as from amavi, amavit, it makes j'aimai, il aima, (anciently aimat,) whereas the Prov. has amei and amet. The Prov., however, sometimes, though rarely, used the termination ai in the first person (Gr. Rom. p. 217); and the terminations in ei and et or eit sometimes occur in old French: thus je trouvey, je saluey, it chanteit, il desarmeit, etc. (Gr. Comp. p. 2482). The first and third persons of the perfect, in the two other French conjugations, anciently were not as now terminated in s and t, but wanted those consonants, as je perdi, je vi, il nasqui, il rendi, je converti, j'establi, il se departi, il failli, (Gr.

¹ An intermediate form of the French imperfect between amava and amoue, viz. ameve, omitted by M. Raynouard, is pointed out by Orell, p. 100—3: thus 'Certes li paiz ne cessevet,' (Si quidem non cessabet pax,) St. Bernard. 'Iu jueyve par defors en la place,' (ludebam ego foris in platea,) St. Bernard. 'Alsi com eles en après racontevent,' (ut post ipsæ referebant,) St. Gregory. [See also Burguy, vol. i. p. 218.]

³ On the third person of the French preterite, see Orell, p. 107.

Comp. p. 271, 281.) The addition of s to the first person of the preterite is an arbitrary change, which likewise sometimes occurred in the Provençal (Gr. Rom. p. 217): the final t of the third person appears, however, to have been retained from the Latin.

On the passive voice of the Provençal and the other languages there is little to be said, as it is formed in all by means of the past participle and the verb substantive. The destruction of the more perfect form of conjugation which is shown in the Greek verb, had already been begun by the change which compounded the Latin language of a Hellenic and a foreign element: so that some of the Latin passive tenses are formed by inflexion, as amor, amabor, others by means of the verb substantive, amatus sum, eram, ero, forem, etc. All these remains of inflexion were destroyed by the influence of the Germans, and the Romance languages form their passive tenses without exception by an auxiliary verb, (Gr. Rom. p. 192. Comp. p. 285.)

All these languages likewise agree in giving a passive sense to the third person of the verb active together with the pronoun se; as in Provençal, 'czo que se conten en aquesta leiczon,' 'that which is contained in that lesson,' (Gr. Comp. p. 287.) By this use of se, as well as of the other pronouns, a verb obtains a reflective sense, which at length becomes merely passive. The Italian makes great use of this mode of expression, and employs it as a substitute for the French on, which the Italian had originally copied from the German, but which never came into general use, and for some centuries has fallen into complete desuetude, (see above, p. 158.)

The Provençal infinitive has preserved the Latin ter-

mination, rejecting the final vowel, as amar from amare, sentir from sentire, far from facere, etc. Sometimes, however, there are two forms of the infinitive, one retaining the final vowel, which the other form rejected, and sometimes suppressing an internal vowel, which the other form preserved; thus far and faire from facere, querer and querre from quærere, seguir and segre from sequi, (modified into sequire, according to a principle which will be presently explained,) (Gr. Rom. p. 194—7.)

Of the other Romance languages the Italian has preserved unchanged the Latin terminations of the active infinitive: the Spanish, like the Provencal, has suppressed the final vowel. The French, suppressing the final e, has retained unchanged the termination in ir, as sentir; that in ar it has, as usual1, changed into er, as mander from mandar, aimer from amar. The Latin infinitives of the second and third conjugations it subjected to greater modifications: in some it suppressed the penultimate vowel of the termination, as defendre from defendere, fondre from fundere, rompre from rumpere, connoistre from cognoscere2; in others it suppressed the final vowel. and then changed the last syllable into eir, and lastly into oir: thus habere, aver, aveir, avoir; movere, mover, moveir, mouvoir; sedere, seer, seeir, seoir; videre, veer, veeir or veir, voir. It will be observed that for the most part the French suppressed the penult vowel when it was short.

¹ See above, p. 123, on the termination in arius, which the French sometimes changed into aire, but more frequently into er.

² Anciently, however, these terminations were sometimes written with er: thus aprender, committer, deffender, discender, mitter, prender, etc. M. Raynouard by an oversight cites ester, from Littleton, s. 276, as an instance of this form, which, as he himself has explained, is for estar from stare.

that is, in verbs of the third conjugation, as in rendre, vendre, fendre, perdre, croire, naître, etc.; and suppressed the final vowel when the penult was long, as in avoir, chaloir, douloir, mouvoir, souloir, valoir, voir, etc. This distinction, however, is by no means invariably observed, as on the one hand there are taire from tacēre, rire from ridēre; on the other there are decevoir, falloir, percevoir, pleuvoir, savoir, cheoir, from decipēre, fallēre, percipēre, pluēre, sapēre, cadēre: pouvoir and vouloir are derived from potere and volere, barbarous forms for posse and velle, which may perhaps have had the penult long from the beginning, as they are now pronounced by the Italians, who (it may be remarked) likewise lengthen the penult of sapere, (Gr. Comp. p. 239, 257—63.)

The Latin termination in ere has often become ire in the Romance languages: thus in the Provençal delir and florir from delere and florere Lat. The following table exhibits some verbs in the three principal Romance languages, which have respectively undergone this change.

From ere of the second Latin conjugation:

Latin.	Ital.	Span.	French.
abolere	abolire	abolir	abolir
implere	empiere and		emplir
-	empire		_
florere	fiorire		fleurir

¹ On the verb cheoir, see Orell, p. 213, Burguy, vol. ii. p. 18.

² Other instances of the reduction of anomalous Latin infinitives to the regular terminations in the Romance languages are afforded by the word esse, which became essere or esser: and by ferre, which, though lost in its simple form, has been variously modified in its compound forms into deferire, profferire, riferire, sofferire, trasferire Ital., deferir, proferir, referir, sufrir, transferir Span., souffrir French.

Latin.	Ital.	Span.	French.
languere	languire		languir
pœnitere	ripentere and ripentire	arrepentir	repentir
tenere	tenere	tenir	tenir

From ere of the third Latin conjugation:

Latin.	Ital.	Span.	French.
adquirere		a dquirir	a cquérir
agere	agire	-	agir
applaudere	applaudere a n d applaudire	aplaudir	applaudir
advertere capere	avvertire capire	advertir	avertir
currere	correre	currer	courir
concurrere	concorrere	concurrir	concourir
convertere	convertere and convertire	convertir	convertir
fallere	fallire	fallir	faillir
fremere	fremere and fremire		frémir
fugere	fuggire	huir	fuir
gemere	gemere and gemire	gemir	gémir
includere	inchiudere	incluir	
incidere	incidere	incidir	
regere	reggere	regir	régir
reprimere	reprimere	reprimir	réprimer
tradere	tradire		trahir
traducere vomere	tradurre	traducir	traduire vomir¹

The Romance languages substituted for the inflected form of the passive infinitive mood, the past participle and the verb substantive: as for amari, essere amato Ital., ser amado Span., esser amatz Prov., étre aimé French.

¹ [Compare Diez, Rom. Gr. vol. ii. p. 126.]

In the deponent verbs this expedient would not suffice: therefore the infinitive was by different means reduced to an active form. The following are instances of this change.

Latin. exhortari irasci	Ital. esortare	span. exhortar	Prov.	French. exhorter
luctari mori mentiri nasci	lottare morire mentire nascere	luchar morir mentir nacer	luchar morir mentir nascer	lutter mourir mentir naître
pati progredi recordari	patir progredire ricordare	padecer recordar		
sequi sortiri	seguire	seguir	seguir and segre sortir	suivir and suivre ² sortir

The principle of declension for present and past participles in the Provençal has been already stated in connexion with that of nouns, (above, p. 79, 80): it now only remains to ascertain the manner of their formation.

The present participle was in all the Romance languages preserved from the Latin without change, except that those of the second and third conjugation were the same, as temens from temer, sentens from sentir, Prov.

The past participles in the Prov. followed the track of the Latin, except that the penult vowel of the participle of the second conjugation was slightly altered, as is shown in the following scheme.

¹ Naistre (naître) from nascere, like paistre (paître) from pascere, and croître from crescere.

² Suivir was used in old French, Orell, p. 257. Roquefort in v. suir. [Burguy, vol. ii. p. 210.]

Fire	et Conj.	Second Conj.	Third Conj.
Lat.	amatus	placitus, perditus	auditus
Prov.	amatz	plazutz, perdutz	auzitz

This is the regular mode of formation; and new participles were thus created independently of the Latin, and in cases where the Latin verb had no participles, or where they were different; as in the subjoined examples.

Lat. infin.	Lat. part.	Prov. infin.	Prov. part,
florere ¹		florir	floritz
lucere		luzer	luzitz³
timere		temer	temutz
cadere recipere mordere	casus receptus morsus	cazer recebre mordre	cazutz recebutz mordutz
vivere	victus	vivre	viscutz

In other cases, however, the Provençal verb did not form its participle according to the rule, but retained only the anomalous Latin form.

Lat. infin.	Lat. part.	Prov. infin.	Prov. part.
aperire	apertus	ubrir	ubertz
claudere	clausus	clorre	claus
coquere	coctus	cozer	cotz
frangere	fractus	franher	frach
mori	mortuus	morir	mortz
nasci	natus	nascer	natz
occidere	occisus	occir	occis
	Gr. Rom.	р. 197204.	Comp. p. 289, 90,

In other instances, however, the Prov. verb had two

¹ M. Raynouard gives florescere, not florere, as the original of the Prov. florer: but see the explanation above, p. 181—2.

² These words are perhaps not the participles of florir and buser, but adjectives from floridus and lucidus.

participles, one anomalous retained from the Latin, and one regular formed according to the Prov. analogy.

Lat. part.	irreg. Prov. part.	reg. Prov. part.
absconsus	rescons	rescondutz
corruptus	corrotz	corromputz
electus	eleitz	eligitz, eligutz
defensus	defes	defendutz
iratus	iratz	irascutz
redemptus	rezemtz	rezemutz
ruptus	rotz	romputz
•	Gr. Rom. p. 202, 205.	•

The formation of the past participles of the first and third conjugations in the other Romance languages offers

¹ M. Raynouard, Gr. Rom. p. 204, makes an anomalous class of 'past participles in at, which changing the Latin termination have passed into the conjugation in or, although originally they belonged to another Latin conjugation.' His examples are

	Lat. infin.	Lat. part.	Prov. infin.	Prov. part.
1	cupere	cupitus	cobeitar	cobeitatz
2	oblivisci	oblitus	oblidar	oblidatz
3	uti	usus	usar	usatz
4	tremere		tremblar	tremblatz
5	calefacere	calefactus	calfar	calfatz
6	dulcescere	dulcitus	adolzar	adolzatz

In the first four of these instances the Prov. does not correspond to the Latin verb: in the three first it is a derivative formed from the Latin participle or supine, viz., cupitare from cupitum, oblitare from oblitum, usitare from usum, (like ventiture from ventum, excitare from excitum, etc.): the fourth, which in Latin would be tremulare, appears to be formed from tremulus: the Ital. and Span. have tremolare and tremolar, (see above, p. 71, note 1.) Calfar is contracted from calfacere, as far from facere: calfatz is likewise contracted from calefactus; where the final a belongs not to the termination, but to the body of the word. Adolzar is likewise a new verb formed from dulcis or dulcor, and has no reference to dulcescere. These words, therefore, ought not to be arranged, with M. Raynouard, under the head of anomalous participles.

no difficulty or anomaly: from atus and itus the Ital. and Span., according to the rule already explained, make ato and ito, and the French, so long as it observed the distinction of cases, made ets or ez, its or iz in the nom., et and it in the acc.: which latter forms it now retains in use, having rejected the final t, as aimet, aimé, sentit, senti: the former, like libertat, libertet, liberté, (above, p. 135. Gr. Comp. p. 239—41, 277—9.) It is curious to observe the number of changes to which the past participle of the first conjugation has been subjected in different Romance languages: thus from amatus, amatz Prov., from amatum, amat Prov., (whence aimet, aimé French,) amato Ital., amado Span., amao, amà, and amò, in different Italian dialects!

In the second conjugation the Prov., as we have already seen, constantly changed the *i* in the penult of the Latin participle into *u*, and formed new participles according to that analogy, making, for example, perdutz from perder, and irascutz from irascer. The Italian likewise makes the same change, and says perduto, tenuto, tenuto, etc. The Span. now makes these participles in ido, as temido, perdido, tenido: anciently, however, their termination was sometimes udo, as connozudo, contenudo, perdudo, tenudo, vendudo, etc. The regular termination of the French participles of this conjugation was likewise uz or ut, now simply u, as venditus, venduts, vendut, vendu, like virtutem, vertut, vertu, (Gr. Comp. p. 239—41, 263—8.)

M. Raynouard appears to lay great stress on the coincidence of terminations just stated, and he thinks

¹ See Gamba, Serie di Scrittori Veneziani, p. 28, 74.

that such an agreement is a decisive proof that some of the Romance languages were derived from a language intermediate between them and the Latin. 'I will remark,' he says, 'that the participles in udo which occur in ancient Spanish cannot have been borrowed directly from the Latin, as the corresponding Latin participles were not in utus.' (p. 265.) If the change had been very considerable, for instance, if for the Latin termination in itus, all the Romance languages had substituted the Greek termination operos, and had made perdomeno, temomeno, etc., then every one would agree with M. Ravnouard that it would be necessary to look for a common cause independent of the Latin usage. But when the change is so inconsiderable as that in question, when it is a mere modification of a vowel sound, it does not appear to warrant any such hypothesis as that attempted to be raised upon it. The i in the penult of the Latin participle became u in the Ital., Prov., and French: in ancient Span. it was sometimes one and sometimes the other: but usage has now given universal currency to the Latin vowel. In Span. moreover, the Latin t has become d: a change of perpetual occurrence, and which likewise appears to have taken place in the Provencal, as the feminines of the past participles all exhibit that letter; thus amatz, amada, amadas: temutz, temuda, temudas; sentitz, sentida, sentidas, (Gr. Rom. p. 206-71.) In these variations from the

¹ The modern Provençal makes the same change in past participles, as well as in adjectives formed from ancient participles, though it has lost the final t of the masc. gender: thus, masc. sing. bouliga moved, fem. sing. bouligado, fem. pl. bouligados: bandi, banished, fem. sing. bandido, fem. pl. bandidos: oousi, heard, fem. sing. oousido, fem. pl.

Latin there seems to me to be nothing which each language may not reasonably be conceived to have effected for itself, independently of any foreign influence: in the Span., moreover, the Latin termination has been universally restored, which would scarcely have happened if it had not been retained by an uninterrupted tradition, and if the modern language had been entirely derived from the Prov. It is to be remarked that the change of i into u has only taken place in participles where, like tacitus, perditus, venditus, it was short, and where probably it had a thick indistinct sound, which might easily pass into u: in participles of the last conjugation, as sentitus, auditus, feritus, where the i was long, that vowel is in all the modern forms preserved unchanged.

As in the Provençal, so in the other Romance languages, many participles of the second and third conjugations were not formed according to the rules just explained, but were derived immediately from the Latin: thus in Italian rompere makes not romputo but rotto, cuocere not cociuto but cotto, morire not morito but morto: in Span. poner not ponido but puesto: abrir not abrido but aperto: in French the participles né, clos, mis, ouvert, are borrowed directly from the Latin participles natus, clausus, missus, apertus, and not formed regularly from naître, clorre, mettre, ouvrir, etc. M. Raynouard describes the derivation in question, by saying that 'the irregular Latin participles, having become Romance, passed into

oousidos: pouli, beautiful, from politus; fortuna, fortunate, from fortunatus, fem. sing. poulido, fortunado, fem. pl. poulidos, fortunados. See Grammaire Française expliquée au moyen de la Langue Provençale, (Marseille, 1826,) p. 32, 73, 78, 86.

the other Latin languages: a supposition perfectly gratuitous, as there is no reason why these forms should not have passed directly from the Latin into each modern language without any foreign assistance.

The Ital. and Span., moreover, like the Prov., have in many instances not only preserved the Latin participle, but have also formed another according to their own analogy. In this manner many verbs have two past participles, one irregular, the other regular, one ancient and the other modern.

Lat. part. natus occisus prensus quæstus rasus tonsus	Ital. trreg. part. nato ucciso preso chiesto raso tonso	Ital. reg. part. nasciuto (nascere) ucciduto (uccidere) prenduto (prendere) chieduto (chiedere) raduto (radere) tonduto (tondere)
Lat. part. conversus extinctus natus prensus ruptus scriptus	Span. irreg. part. converso extincto nado preso rotto escrito	Span. reg. part. convertido (convertir) extinguido (extinguir) nacido (nacer) prendido (prender) rompido (romper) escribido (escribir) ² Gr. Comp. p. 289—97.

¹ Ces participes, devenus romans, passèrent dans les autres langues de l'Europe latine.' Gr. Comp. p. 290. By Romance, it is to be observed, M. Raynouard means Provençal.

² These double forms, it will be observed, properly belong to the same verb, like $\tilde{\epsilon}r\nu\nu\mu\alpha$ and $\tilde{\epsilon}r\nu\pi\alpha\nu$; and they are altogether different from those cases in which a more recently formed verb has not only its own regular participle, but also a participle of an obsolete form, which is assigned to it as having no owner, and being a sort of waif or

A system of double forms, exactly analogous to those pointed out in the participles of some of the Romance languages, prevails in the preterites and participles of many English verbs, which have preserved their ancient Saxon form, and at the same time coined a new one according to the more prevailing analogy. Thus the common participle of acquaint is acquainted, in Scotch it is acquent: on the other hand the common preterites of wind and grind are wound and ground, in Scotch they are winded and grinded: in many other cases the original form has become antiquated and the modern form is alone in use, as clomb and climbed, spat and spit, clave and cleft. puck and picked, squoze and squeezed: although these ancient preterites still retain their currency as provincialisms1. Some English nouns likewise have a double plural, as brethren and brothers, one formed according to the ancient, one according to the more recent practice: like the Ital. nouns mentioned above, such as corpo, pl. corpora and corpi; prato pl. prata and prati, which have the Latin as well as the Ital. form of the plural². The double genitive case in English, one formed by synthesis. the other by analysis, (as Shakspeare's plays, an edition of Shakspeare,) is another example of an ancient and a modern form running parallel in a language, without the one supplanting the other.

estray. Thus in Spanish juntar and soltar (solutare) have their regular passive participles juntado and soltado: but, besides these, they likewise lay claim to junto and suelto, from junctus and solutus, the participles of the obsolete Latin verbs jungere and solvere. See Gr. Comp. p. 293.

See Philol. Museum, vol. ii. p. 198 and 214, and other parts of the same article, where this subject is treated at length and fully explained.

² Above, p. 117.

§ 2. SYNTAX OF VERBS.

Having thus examined the structure of the Provençal and the other Romance verbs, I will now transcribe from M. Raynouard a few remarks on their syntax, and their relations with other parts of speech.

The Prov. sometimes uses its gerund like the Latin, as 'aman viv e aman morrai,' I live in loving and I shall die in loving:' sometimes it prefixed the preposition en or a, as 'en ploran serai chantaire,' 'in weeping I shall be a singer.' 'Al pareissen de las flors,' 'at the appearing of the flowers,' (Gr. Rom. p. 230.)

All the Romance languages, like the Greek and sometimes the Latin, used the infinitive mood as a substantive, (which indeed it must in strictness be considered,) and prefixed prepositions to it, as in Prov. 'En agradar et en voler Es l'amors de dos fis amans,' 'In pleasing and in wishing is the love of two pure lovers.' In the other languages this idiom is too well known to require the repetition of examples, (Gr. Rom. p. 231. Comp. p. 3001.)

In Latin, as is well known, pronouns when the subjects of verbs were rarely expressed. In all the Romance languages this usage was retained, both when the suppressed pronoun signified a person, and when it signified a thing, in which case a verb is said to be employed impersonally. In French the ellipsis of the pronoun has now become obsolete: but it was anciently universal, and used in all styles whether lofty or familiar; nor was it to the jocular poetry of Marot, or to the style known in France by the name of *Marotique*, that this idiom was

¹ [See Diez, Rom. Gr. vol. iii. p. 208.]

confined, as some writers have supposed, (Gr. Rom. p. 233—7. Comp. p. 301.)

The infinitive preceded by a negation was in Prov. sometimes used with an imperative force¹: as 'Non temer, Maria,' 'Fear not, Mary.' 'Ai amors, no m'aucire,' 'ah, love, do not kill me.' This idiom is still used in Italian², and it existed in old French; but M. Raynouard states that he has not been able to find any instance of it in Spanish or Portuguese, (Gr. Rom. p. 237. Comp. p. 302.)

All the Romance languages have used the custom of addressing a person in the plural number of the verb, any adjective which refers to the subject nevertheless remaining in the singular, (Gr. Comp. p. 238. Comp. p. 303.) The Provençal, moreover, like the Latin, often put the verb in the sing. number after several nouns: as

Dieus sal vos, en cui es assis Mos joys, mos desportz e mos ris.

'God save you, in whom is placed my joy, my happiness, and my laughter.'

The Prov. likewise used the plural after a noun of multitude, as

Amor blasmon per non saber Fola gens, mais lei non es dans.

'Foolish people blame love from ignorance, but it does not suffer.'

¹ The infinitive is never thus used except in a negative address: see Raynouard, *Journ. des Sav.* 1825, p. 184.

² See Perticari, *Dif. di Dante*, c. 18. vol. i. p. 375. [Diez, *Rom. Gr.* vol. iii. p. 204.]

M. Raynouard says that 'the following form is remarkable: ab, with, is considered as a conjunction.'

E pueis lo reis, ab sos baros, Pueion e lor spazas ceinzon.

'And then the king with his barons get up and gird their swords.'

This is one of those forms which are called ungrammatical; that is, the sentence is formed according to the sense, and not according to the structure of the words. Instances of this peculiar idiom occur in Latin, and it is of frequent occurrence in English, (Gr. Rom. p. 239—40¹.)

M. Raynouard closes his remarks by an explanation of the use of que in connexion with verbs. Que, as a pronoun, is derived, as has been already mentioned (p. 157,) from quod: as a conjunction it is taken from quia², to which word the lower Latinity attributed the senses both of that

E sì da un ago il cor mi sentii punto, Cha'n vederti restai magio e balordo.

Ca (for quia) occurs frequently in old Spanish: see for example Milagros de N. Señora, v. 37, 47, 71, 77, 84, 87, etc. Sanchez, vol. ii.

¹ The following are Latin examples of this construction. Livy, xxi. 60. Ipse dux cum aliquot principibus capiuntur; where see Ruperti. Sallust. Jug. c. 38. Cohors una Ligurum cum duabus turmis Thracum...transiere ad regem. c. 101. Bocchus cum peditibus... postremam Romanorum aciem invadunt.

² Ca for that, used by the early Ital. poets, shows its original more plainly than che: thus in some verses of Ruggerone of Palermo, written about 1230 A.D. 'E la mi priega per la sua bontate Ca mi deggia tenere lealtate: see Perticari, Dif. di Dante, c. 22, vol. ii. p. 5. Cha occurs in the Lamento di Cecco, st. 9.

and because1. The Prov. conjunction que thus obtained two senses: 1. where it either replaced the use of the Latin accusative before a second verb in the infinitive mood, according to the German construction, as 'E conosc be que ai dic gran follatge,' 'I know well that I have said a great absurdity,' where the classical Latin would say 'scio me dixisse:' or where the Latin would use ut, quod, or some other particle, as 'vos prec que m' entendatz,' 'I pray you that you will hear me.' 'Guart si que res no mi cambi,' 'Let him take care that nothing changes me.' And 2dly where it replaces quia, in the ordinary classical sense of because, as 'Alberguem lo tot plan e gen, Que ben es mutz,' 'Let us lodge him plainly and well, since he is dumb.' 'Ni contra mi malvat conselh non creia, Qu'eu sui sos hom liges,' 'And let him not believe evil counsel against me, since I am his liegeman.' M. Raynouard mentions that the manuscripts often have the various reading quar or car (from quare) for que in this sense, (Gr. Rom. p. 241—4.)

All the other Romance languages have this double use

The well known assertion, 'credo quia impossibile est,' is commonly taken as a declaration of passive belief: but the truth is, that no man in his senses ever believed a thing because it is impossible, though he might believe a thing in spite of its apparent impossibility: this sentence merely means, as has been remarked by others, 'I believe that it is impossible.'

¹ Matth. xxvi. 21, is in the Vulgate translated 'Amen dico vohis quia unus vestrum me traditurus est.' Διότι in Greek also properly and originally meant because: but it obtained the sense of that at a comparatively early period of the language, and is used for öτι by good writers, as Herodotus and Plato: see Welcker's Rheinisches Museum, vol. ii. p. 265. Dobrie, Adversaria, vol. ii. p. 403. Perchè in Ital. has also a similar ambiguity; and like quia and διότι its original sense is because.

of the particle que (in Ital. che) in the sense both of that and because, and employ it with verbs in the same manner. The French alone has disused the causal sense of que, which, however, occurs in old writers, as in Amyot's translation of Plutarch,

Il faut qu'il soit assisté d'un des dieux, Qu'il est si fort au combat furieux.

Gr. Comp. p. 304-8.

The Prov. and the other languages sometimes suppressed the particle that between two verbs, as in Prov. 'Ben sapchatz...s'ieu tan non l'ames, Ja no saupra far vers ni sos.' 'Know well, if I did not love her so, I should never know how to make verses or sounds.' So in Ital. 'Dubitava... non fosse alcuna dea:' in Span. 'temo... seré culpado:' in old French, 'Ne nous ne pourrions nier... Ne nous aiez par armes pris,' (Gr. Rom. p. 245. Comp. p. 308—11.)

M. Raynouard concludes his chapter on the comparison of the Romance verbs, with a brief enumeration of some of their most important points of resemblance: and he then enquires whether any one who sees such conformities can believe that these different languages could have presented them, if they had not been derived from a common origin. There is no doubt or difference of opinion about the answer to be given to this question: every one admits that the Romance languages had a common origin; that common origin has generally been supposed to be the Latin, and the Latin alone: M.

¹ 'Quand on voit de telles conformités, peut-on croire que ces diverses langues auraient pu les offrir, si elles n'avaient eu primitivement une origine commune.' p. 811.

Raynouard undertakes to show that it was the ancient Provençal: but his argument is not assisted by proofs which, however consistent with the truth of his own hypothesis, are equally consistent with the truth of that which he is attempting to overthrow.

CHAPTER V.

Prepositions, Adverbs, and Conjunctions in the Romance Languages.

§ 1. PREPOSITIONS.

In examining the indeclinable parts of speech in the Romance languages, viz. prepositions, adverbs, and conjunctions or particles, it will be convenient to begin with the prepositions, as many are used adverbially, and need not be repeated under the head of adverbs.

AB, A. This Latin preposition was preserved in the Provençal, but its meaning was entirely changed, as it received the sense of with instead of from or by. This wide departure from the original meaning of prepositions will be pointed out below in other instances.

Thus in the oath of 842: 'Ab Ludher nul plai nunquam prindrai,' 'I will never make any treaty with Lothaire:' in the poem on Boethius, 'Ella ab Boeci parla ta dolzament,' 'She spoke so sweetly with Boethius.' Or the b was omitted, as 'Es a dreit jugatz,' 'he is judged with justice.' The Ital., Span., and French likewise sometimes used the preposition a in the sense of with, as 'Furo ricevuti tutti a grandissimo honore,' (Giov. Villani.) 'La cinta fué obrada a muy grant maestria,' (Poema de Alexandro.) 'Et furent reçu a grant feste et a grant joie,' (Villehardouin.)¹ These languages, however, had other prepositions which they commonly employed in that sense².

The Provençal subjected this word to a change of which there are examples in other languages, by inserting m before b, when it became amb; as 'Et aqui atrobero lor fraire Thomas et l'arcevesque Turpi amb elhs,' 'And there they found their brother Thomas and the archbishop Turpin with them.' Afterwards the final b after m was rejected, as was also the case with the final d or t after n, and the preposition became am, as 'Am l'ajutori de Dieu,' 'With the help of God.' From the completest of these forms the modern Provençal has derived its preposition embe, which is in common use in the sense of with.

The French on the other hand has formed its preposition avec⁵ from ab, by the addition of a suffix, to which I am not aware of any parallel, (Gr. Rom. p. 249—51. Comp. p. 318—20⁶.)

¹ Galvani, Osservazioni sulla Poesia dei Trovatori, p. 131, quotes some instances of the use of ab for cum in Latin authors, as 'Et tenerum molli torquet ab arte latus,' Ovid. Amor. ii. 4, 30. 'Ne possent tacto stringere ab axe latus,' Propert. iii. 11, 24.

² Some instances of *d* being used in ancient French with the sense of the Latin *ab*, as 'apreneiz à moi,' 'discite a me,' in St. Bernard, are cited by Orell, *Alt-französische Grammatik*, p. 317, (Zurich, 1830.)

³ Thus δβριμος and δμβριμος, ἀπλακέω and ἀμπλακέω, Σηλυβρία and Σηλυμβρία, Τύφρηστος and Τύμφρηστος, θιβρός and θιμβρώς, θίβρων and Θίμβρων (see Meineke, Euphor. Fragm. p. 149, 157,) in Greek: Robert is Ρόμπερτος in the Γ-zantine writers. See above, p. 71, note 1.

⁴ See above, p. 80.

⁵ See Orell, ibid. p. 318.

⁶ [See Diez, Rom. Gr. vol. ii. p. 453, vol. iii. p. 167, and Burguy, Gr. de la Langue d'Oil, vol. ii. p. 345, who, relying upon the ancient

AD, A. This preposition was preserved in the Provençal, the final consonant being always suppressed before a consonant, and sometimes before a vowel. M. Raynouard says that 'sometimes the d is for the sake of euphony changed into z: thus in the Roman de Jaufre, of which there are two manuscripts, one has 'El pres eran ad anar,' the other 'az anar,' (Gr. Rom. p. 66.) Az in the latter instance is ads, (like Thiebauz for Thiebauds,) and is obtained by the addition of s, many other examples of which will be noticed.

All the other Romance languages have retained a from the Latin ad, and use it prefixed to a noun as a substitute for the Latin dative¹, (Gr. Rom. p. 251.)

ANTE. This preposition underwent the following changes in Provençal, ant, an, ans or anz; of which form the first only occurs as an adverb, the last is formed by the addition of a final s. The second only occurs in composition, as enan, denan, adenant, abans, davan or devan, which resolved into their elements are in ante, de in ante, ad in ante, ab ante, de ab ante; antan, 'formerly,' comes from ante annum; derenan and deserenan, 'henceforth,' M. Raynouard derives from 'de hora in antea,' and 'de ipsa hora in antea.'

forms avoc and avuec, derive the word from ab hoc. Ampère, p. 292, thinks that ove was the original form of avec, and derives it from ubi.]

¹ Cinonio in his Treatise on the Italian particles, c. 1, does not distinguish between a derived from ab, and a derived from ad: which, although they have the same sound, are, like che from quod and che from quia, etymologically different words. The same observation like wise applies to the preposition da, which in such expressions as 'da sera a mane,' 'fatto da me,' comes from de ab; in such expressions as 'verrò da voi,' 'I will come to your house,' 'gioje da donne,' 'età da marito,' 'carta da scrivere,' 'da dieci mesi,' 'about ten months,' it comes from de ad. [Compare Diez, Rom. Gr. vol. iii. p. 150.]

The other Romance languages had also various derivatives of this preposition. The Italian once used ante unchanged: its common forms are, however, avanti and davanti (anciently avante and davante) from ab ante and de ab ante; also dianzi and dinanzi from de antius and de in antius. The Span. has retained ante as a preposition unchanged; as an adverb it used antes, with a final s. Ant for ante, and avant for avante, occur in ancient writers. It has likewise antaño in the same sense and with the same origin as the Prov. antan. The French has avant and devant, like the Prov. and Ital. and dorénavant from de hora in ab ante, which does not precisely agree with the Prov. derenan or deserenan, and moreover adheres more closely to the Latin, (Gr. Rom. p. 258—61. Comp. p. 344.)

From antius the neuter comparative of ante, like propius from prope, Menage derives anzi Ital., antes Span., and ainsi, anciently anz and ains, French. The Prov. has ans or aintz, in the sense of rather, which confirms this etymology. The Ital. uses anzi not only in the sense of rather, but also as a preposition equivalent to ante².

APUD. From this preposition the Ital. has made appo, like capo from caput; none of the other Romance languages appear to have preserved it.

CIRCA. Preserved unchanged in Italian: the Spanish makes it *cerca*. M. Raynouard does not mention any Provençal derivative of this preposition, nor is it preserved in French³.

¹ Cinonio, Trattato delle Particelle, c. 36, 76, 82, 89,

² Cinonio, c. 27. [Diez, Rom. Gr. vol. iii. p. 176. Burguy, vol. ii. p. 271.]

³ [Diez, ib. p. 176.]

CONTRA. The Ital., Span., and Prov., have this preposition unchanged: the French has softened the final a into e. The Ital likewise has the form contro, whence it has formed incontro: the Span. also has the adverb al encuentro. The Prov. has encontra, (Gr. Rom. p. 2641.)

Cum. In Ital. and Span. this preposition has been preserved under the form con^2 : in Prov. and French its place has been supplied (as already stated) by ab and avec. Nevertheless the Prov. used it as an adverb or conjunction in the sense of as or how, sometimes in its Latin form, sometimes making it con or co: thus 'no sai com,' 'I know not how;' 'Fresca cum rosa en mai,' 'fresh as rose in May;' 'Si com in isto pergamen es scrit,' 'as it is written in that parchment;' 'Aissi col peis an en l'aigua lor vida,' 'Like as the fishes have their life in the water.'

The Ital. and Span. have from cum formed come and como, which they use in the same manner as the Prov. com³: the French has made comme (anciently com) and comment, which latter is a lengthened form corresponding to the Ital. comente employed by ancient writers. The Ital. likewise sometimes used chente for che, and finente for fino: which Perticari compares with Moisente for Mose, which occurs in the Nobla Leycon⁴: it will be shown hereafter that niente is probably a paragogic form of this kind, from the acc. of the Latin res, (Gr. Rom. p. 265—7. Comp. p. 342⁵.)

¹ [Diez, Rom. Gr. p. 178. Burguy, vol. ii. p. 346.]

² See above, p. 66.

³ Com occurs without the euphonic vowel in both Italian and Spanish.

⁴ Difesa di Dante, c. 12, n. 12 to the text.

⁵ [Diez, ib. p. 167. Burguy, vol. ii. p. 281.]

DE. All the languages derived from the Latin have retained this preposition unchanged, (except the Ital. which now, except in certain cases, uses di;) and employ it before a noun to express the meaning conveyed in Latin by the genitive and sometimes by the ablative case, (Gr. Rom. p. 267. Comp. p. 321¹.)

EXTRA. From this word the Prov. made estra, ester, and esters, used both as prepositions and adverbs. The latter forms appear to have arisen thus: estra, estre, ester, and with the final s, esters, (Gr. Rom. p. 272.) The Span. has preserved this preposition unchanged: it likewise occurs as estre in old French².

From extra, by the suppression of the first syllable and the addition of a final s, appears to be derived the Prov. adverb tras, as well as the French très: in Ital. stra and tra occur sometimes in the same sense, which show their origin more distinctly, as 'straricco,' 'strabbondanza,' 'strabuono,' 'travalente e tranobile imperadore,' etc.'

In. The Prov. changed this preposition into en, and before a consonant sometimes suppressed the n: the Span. and French likewise use en, but never omit the n: the Ital. alone has preserved in unchanged, though en sometimes occurs in ancient writers, (Gr. Rom. p. 267. Comp. p. 3224.)

INFRA. The Ital. alone (as it appears) has retained this preposition, which it has changed into *fra*, giving it the sense of *among* and *in*. There appears to be no way of accounting for so great a change of signification as

¹ [Diez, Rom. Gr. p. 156.]

² Orell, p. 324. [Diez, ib. p. 181. Burguy, vol. ii. p. 353.]

³ Annot. 59 to Cinonio, c. 191. [Burguy, vol. ii. p. 353.]

^{4 [}Diez, ib. p. 163.]

this word has undergone, except by supposing that fra and tra have been confounded, (see Cinonio, c. 112, 134.)

INTER OF INTRA. Hence the Span., Prov., and French formed their preposition entre; the Ital. sometimes preserves the Latin form without change, sometimes it omits the first syllable, and makes tra from intra, like fra from infra. Probably in both these words the first syllable was omitted, as being taken for the preposition in, and a separate word; in the same way that super lost its last syllable, which was mistaken for the preposition per1.

Entre in Prov. was sometimes used as a conjunction with que in the sense of whilst, as 'entre qu'es tos,' 'while he is young:' which particle at other times took the form of mentre with the same sense. This latter word, which likewise occurs in Ital., in Span. under the form of mientras, (anciently sometimes written mientre,) and in French as endementres or endementiers, appears to be compounded of dum intra: for in old Ital. domentre sometimes occurs², which evidently betrays its origin. Domentre was doubtless corrupted into di mentre or dementre, and the first syllable being taken for the preposition de was rejected as superfluous.

From intro the Prov. made a preposition entro, which had the sense of until, as 'entro a la fin del mont,' 'until the end of the world.' Sometimes the first syllable was omitted, and it became tro, as the Ital. made tra from intra, as 'del cap tro al talo,' 'from the head to the heel.'

¹ See below in *super*, p. 207. [Diez, *Rom. Gr.* p. 180.]

² See Cinonio, c. 171, who gives examples both of domentre and dimentre, and Muratori in v. who derives domentre from dum interea, or dum interim. Dementre occurs in Provençal, see Galvani, p. 262. See also Orell, p. 334. [Burguy, vol. ii. p. 380.]

In both these forms it could be used as a conjunction. From intro the Ital. has made entro, and by prefixing de, dentro, in the sense of within. The Span. likewise made dentro, and likewise adentro by prefixing a as well as de, (Gr. Rom. p. 268—71. Comp. p. 323, 343.)

JUXTA. The Prov. changed this preposition into justa, josta, and, prefixing de, dejosta. The Ital. has giusta and giusto, the old French jouxte¹, (Gr. Rom. p. 283—4.)

Per. The Prov. and Ital. made no change in this preposition: the Span. made it por and para, the French pour and par, but the original form occurs in old writers of both these languages. The Prov. as well as the Ital. has the particle pero from per hoc, (Gr. Rom. p. 300—2. Comp. p. 322².)

Post. This word the Prov. changed into the forms pos, pois, puois, poisas, pus, and pueis: using it, however, as an adverb and conjunction, and not as a preposition. It likewise, as in many other instances, prefixed the preposition de and thus made de pois. From post the Ital. made poi, which once was sometimes used as a preposition³; but now is only used as an adverb or conjunction. Dopo, which appears to be compounded of de and post, (dopoi from depoi, like domani from demane, and domandare from demandare,) has taken the place of the Latin preposition. The Span. made anciently pos and pois, and, by a composition with de, depos⁴. Afterwards, as in other instances⁵, it changed pos into pues, and by adding a final s after de,

¹ Orell, p. 326. [Diez, Rom. Gr. p. 174.]

² [Diez, ib. p. 169.]

³ Cinonio, c. 201, § 4.

⁴ Poema de Alexandro, 1842. Sanchez, vol. ii. p. 261.

⁵ See above, p. 67, n. ¹.

made depos into despues, the modern form. So the French made puis and depuis; the former of which was formerly, the latter is now, used as a preposition. It may be remarked that the Ital. has poscia from postea, a form which all the other Romance languages have lost, (Gr. Rom. p. 303. Comp. p. 3261.)

PROPE. From this word the Prov. formed as adverbs and prepositions prop and pres, and by composition aprop, apres, en apres, de prop. Pres appears to have been formed from prope as follows: prop, pro, pre, pres: all which changes, viz. the rejection of a final consonant, the change of o into e, and the addition of a final s, may be paralleled by many instances in the Romance languages. The corresponding forms are presso and appresso in Ital. apres in old Span. près, après, (anciently aprop²,) and auprès in French.

In Prov. as in French, apres or aprop signified after: thus

Cal prezatz mais e respondetz premiers; Et aprop vos respond En Perdigos.

'which prize you most and answer first, and after you, let Lord Perdigon answer.'

This change of meaning took place on account of the facility of transition from the notion of place to that of time. As prope meant near, from signifying next in the order of place, it came to mean next in order of time: after which it was easy to pass to the notion of mere posteriority. This transition in Ital. may be distinctly traced in the uses of the word appresso: thus 'La giovane

¹ [Diez, Rom. Gr. p. 177. Burguy, vol. ii. p. 363.]

² See Orell, p. 318.

subitamente si levò in piè e cominciò a fuggire verso il mare, e i cani appresso di lei: (Boccaccio, Giorn. 5, nov. 8,) where appresso di lei means 'close upon her.' Again, 'Venuta era Elisa alla fine della sua novella, quando la reina ad Emilia voltatasi le mostrò voler che ella appresso d'Elisa la sua raccontasse,' (ibid, Giorn. 4, nov. 1,) where appresso d'Elisa means 'next after Elisa in order of time: as in Dante,

Però non lagrimai nè rispos'io Tutto quel giorno nè la notte appresso. Inferno, c. 331.

Appresso, however, in Ital. never obtained the general sense which belonged to après in French, but was (as it appears) only used to signify immediate succession, without anything intervening. The confusion between succession of place and time may be observed in many words, as in interval from intervallum², and in after, which has both significations, (Gr. Rom. p. 304—6. Comp. p. 323³.)

SECUNDUM. From this preposition the Prov. made segont, and by a change most frequent in that language segon. The Ital. adhering closely to the Latin made secondo, the Span. segun, anciently segund and segunt, the French originally segont, which has now become selon, (Gr. Rom. p. 308. Comp. p. 325.)

SINE. From this preposition the Prov. by adding s made senes, modified into sens, ses, and sans. The Ital. senza or sanza has been formed from sens or sans, by the addition of an euphonic vowel, which the French sans

¹ Cinonio, c. 31.

² See D. Stewart's Essay 1, on the Beautiful, c. 1.

³ [Burguy, vol. ii. p. 362.]

has not taken: the old Ital., however, used both san and sen¹. The Span. alone has remained faithful to the Latin, and says sin: anciently, however, it used sen and senes, like the Prov., (Gr. Rom. p. 308. Comp. p. 324².)

SUPER. This word was used by the Italian without change, but each syllable was written separately, so that the latter part was taken for the preposition per, and the first syllable became an independent preposition in the sense of on: thus 'Tutte... su per la nave quasi morte giacevano,' (Bocc. Giorn. 2, nov. 7.) 'E lei segnendo su per l'erbe verdi, Udi dir alta voce di lontano,' (Petr. p. 1, mad. 2.) Su was then used by itself, as 'Siede la terra dove nata fui Su la marina dove il Po discende Per aver pace, etc.' (Dante³.) The form sur, however, contracted from super, also occurs in Italian⁴.

It should be observed that su the preposition in Ital. has quite a different origin from su the adverb: see below in jusum.

Supra. Changed by the Prov. into sobre, and compounded with de into desobre, which latter was also used adverbially. The Ital. slightly modified it into sopra or soure: the Span. has sobre: the French changed soure or soure into sore by omitting the v, into seure by modifying the o into e: whence came the modern form sur: unless indeed it was formed more compendiously from super, (Gr. Rom. p. 313. Comp. p. 324⁵.)

¹ Vocab. della Crusca in san. Cento Osservazioni al Dizionario Dantesco di Viviani (Turin, 1830), p. 56.

² [Diez, Rom. Gr. p. 181. Burguy, vol. ii. p. 364.]

³ Cinonio, c. 233, § 1-4.

⁴ Annot. 74, to Cinonio, c. 231. [Diez, ib. p. 179.]

⁵ [Burguy, vol. ii. p. 366.]

Subtus. As from supra the Prov. made sobre and desobre, so from subtus it made sotz and desotz. The Ital. and Span. following their own mode of formation changed subtus into sotto and soto: the French has contracted it into sous, anciently soubs, (Gr. Rom. p. 2131.)

Trans. This word the Prov. changed into tras, and by composition made atras and detras, adverbs. The identical forms recur in Span. and they bear in both languages the sense of behind. The old French likewise used tres and tries in the sense of behind. The transition from the ancient to the modern sense is easily explained: thus in a passage of the Roman de Jaufre cited by M. Raynouard, 'Et abaitant us nas issi Qui estava tras un boison,' 'and at the instant a dwarf came out who was behind a bush:' it comes to the same thing whether he is said to be on the other side of the bush or behind it. From this particular to the more general sense of behind, the distance is not great. The Ital. has not, as far as I am aware, any derivative of trans, (Gr. Rom. p. 261.)

VERSUS. The Prov. modified this word into vers, ves, vais, and vas, and by composition made deves, envers, envas, enves. The Ital. has verso and inverso: the French vers, envers, and devers. The Span. has lost this preposition, (Gr. Rom. p. 3193.)

ULTRA. The Prov. has ultra, oltra, and outra; the Ital. oltra and oltre; the Span. ultra; the French ultre, now outre, (Gr. Rom. p. 271, Comp. p. 3284.)

¹ [Burguy, vol. ii. p. 365.]

² [Burguy, ib. p. 369.]

³ [Diez, Rom. Gr. vol. iii. p. 178.]

the French adverb tres have been derived from ultra by the addition of the final s: thus the Ital. has oltracotanza and tracot.

model of the German zetal and zeberge¹. From aval the French has made avaler, to swallow (i.e to put down the throat,) and the Span. avalar, to tremble like the earth (i.e. to sink down.) Gr. R. p. 257.

ADES, now; ADESSE or DES, since: formed with ad and de, and es, from ipse (above p. 160,) The Ital. has adesso: the French, dès. Neis 'even,' and anceis 'on the contrary,' Prov. were formed by compounding the same pronoun with in and ante. (Gr. R. p. 251—9.)

ENTORN, ENVIRON, from tornare and girare. The Ital. has intorno, d'intorno, a torno or attorno, and dattorno: the French, à l'entour, and autour without the preposition en². It has likewise environ. (Gr. R. p. 271.)

Dante, Inferno, xii. 46. Da valle and da monte are still in use among all the inhabitants of the Apennines, according to Perticari, Dif. di Dante, c. 16, vol. i. p. 340.

- ¹ See V. Hagen, Glossary to *Nibelungen Lied*, in tal. Grimm, vol. iii. pp. 148, 163. [Burguy, vol. ii. p. 271.]
- * Tour comes from torn, or turn, as jour from jorn, chair from carn, enfer from enfern, cor from corn, four from furn: see Gr. Comp. p. 63—4. [See Diez, vol. iii. p. 176.]

Giorno and jour come from diurnum, as inverno and hiver come from hibernum (tempus being understood,) which I should have thought it unnecessary to mention if a modern Italian critic had not derived giorno from horn German, because the Alemans and Franks announced the day by the sound of the horn! (Benci on Malispini, vol. ii. p. 433, ed. Leghorn, 1833.)

It may be observed that the Spanish has alone retained the derivative of the Latin dies, dia, in common use: the Ital. has the word di but commonly uses giorno: the French has only jour. The substitution of the periphrasis diurnum (tempus) for dies is paralleled by hybernum (tempus) for hyems, (inverno Ital., invierno Span., hiver, anciently hyvern French; æstivum (tempus) for æstas (estio Span., the Ital. and French have estate and esté,) and matutinum (tempus) for mane (mattino Ital., matin French, the Span. has manana, i.e. hora matutina.) Autumnus is retained in all three languages; ver is lost in French, which has printemps, but is retained by the Ital. and Span. in the compound primavera.

LEV, from leve, which had the double sense of the English word lightly, viz. quickly and (joined with ben) easily, whence it came to signify perhaps; as

D'amor non dei dire mas be, Quar non ai ni petit ni re, Quar ben leu plus no m'en cove.

'Of love I ought not to speak well more, as I have not any, either small or great, for perhaps more does not beseem me.'

It is probable that this adverb, which appears to be peculiar to the Provençal, was imitated from the German. (Gr. R. p. 284.)

MALGRAT. This word is used in all the Romance languages, with a personal pronoun often inserted immediately before grat: thus malgrat vostre, mal mon grat, mal lui grat Prov., mau gré sien, mau gré lor French, mal su grado Span., mal mio grado, mal grado suo Ital. These expressions may be rendered, 'with my ill pleasure,' with his ill pleasure,' etc. If a possessive pronoun is not used, the phrase takes a different turn, as 'malgrat de Karle' 'with the ill pleasure of Charles.' Grat (from gratum) is here used substantively as grato or grado in Ital., (Voc. della Crusca in v.), agrado in Span., and gré in French, in the expressions savoir gré, à mon gré, etc. (Gr. R. p. 286. Comp. 359—611.)

Mantenen, sometimes de mantenen, from manu tenens; mantenente, immantenente Ital.², maintenant French, á man teniente in Span., has a different meaning. De manes, another Prov. adverb, signifying suddenly, appears evi-

¹ [Burguy, vol. ii. p. 357.]

² Perticari, Dif. di Dante, c. 16, vol. i. p. 349.

dently to come from manus, corresponding to 'offhand' English, 'aus der Hand' German; and not from mane in the sense of early, as M. Raynouard supposes. (Gr. R. p. 281.)

This Latin word was first used in Provencal adverbially, with the preposition a, as ora, in the sense of now: afterwards the preposition was omitted, and it became ara, ar, era, er, and with a final s, oras, eras. From in hanc horam was derived encar or encara, with the final s, encaras or enqueras, 'hitherto:' from des l'ora (i.e. de ipsa illa hora) deslor, 'henceforth;' from qua hora, quora, 'when;' derenan has been already mentioned (p. 200.) Ora occurs as an adverb with the same sense in Ital., which also has ancora. Ore, or, ores were formerly used in French, which now uses encor and déslors. M. Raynouard cites a passage from an ancient French chronicle, which well illustrates this application of hora: 'Barcinone est une cité qui siet en la marche d'Espaigne: une heure estoit des Sarrazins, et une heure estoit des Crestiens. (Comp. R. p. 293—6. Comp. 330°.)

Pron or Pro. This word occurs in Prov. with the sense of Satis:

Del papa sai che dara largamen Pron del pardon e pauc de son argen.

'Of the pope I know that he will give liberally plenty of indulgences and little of his money.'

The old French had *prou* in the same sense. M. Raynouard offers no suggestion on the derivation of these words. (*Gr. R.* p. 263³.)

¹ [Burguy, vol. ii. p. 304.] ² [Burguy, ib. p. 311.]

³ [Diez, Rom. Gr. vol. iii. p. 148. Rom. Wörterbuch, p. 278. Burguy, ib. p. 320.]

Tost. This enigmatic word occurs in all the Romance languages: tosto Ital., tost old Span. and Prov., toste old Portug., tost now tot French. No probable explanation of its origin has hitherto been given. (See Muratori in v. Gr. R. p. 316. Comp. 3331.)

TROP. In Prov. this word meant very, and too much: thus 'Sap trop ben violar' 'he knew very well how to play on the viol.' 'Per qu'om no-s deu per gaug trop esjuazir, Ni per ira trop esser anguoyssos.' 'Wherefore one ought not for joy to exult too much, Nor for sadness to be too much cast down.' Troppo in Ital., has both these senses (Cinonio, c. 243) trop French, only the last. As troppus is used in the Latin of the middle ages with the sense of a herd or flock, Muratori (in v.) thinks that it is derived from some German word, whence the French troupe and troupeau, (also truppa Ital.) Troppo, a substantive, is preserved in Ital. (Gr. R. p. 3172.)

VETI, i.e. 'See thou,' or in the plural vecvos (softened into veus) 'see ye,' used adverbially like the French voici and voilà, which are compounded with the particles ci here, and là there. The Ital. alone has preserved ecco, from the Latin eccum. (Gr. Rom. p. 3203.)

¹ [Diez, Gr. Rom. vol. ii. p. 442, derives the word from tot cito; Burguy, vol. ii. p. 329, from tostus.]

² It might be thought that the French adverb *très* is formed from *trop*, like *près* from *prop*: but the Prov. form *tras*, shows that it had not this origin, and that one of the two derivations above suggested is correct: see p. 208. [Concerning *trop*, see Burguy, vol. ii. p. 330.]

³ So sih-tir was used in old German, Grimm, vol. iii. p. 247.

§ 3. conjunctions.

I shall next proceed to the conjunctions and the affirmative and negative particles, which may be conveniently treated apart, as they are marked with some peculiar features in the Romance languages.

Aur. In Prov. and old French this word became o or ou; in modern French the latter form alone is used; in the Span. it is o. The Ital. alone has retained the consonant changed into d, and has made the word od; before a consonant, however, the d is dropped, as in English the n of an is only used before a vowel, (Gr. Rom. p. 336. Comp. p. 346.)

Et. Preserved unchanged in Prov., but the *t* was generally dropped before consonants: in Ital. *et* or *ed*, subject to the same rule. The French now only has *et*, but the *t* is not pronounced: *e* is sometimes written in old French: the Spanish formerly used both *et* and *é*, now it has only *y*, (Gr. Rom. p. 328. Comp. p. 345.)

All the modern derivatives of aut and et have retained their ancient sense unchanged.

GAIRE or GUAIRE in Prov., guari in Ital., guère or guères French. These adverbs are evidently derived from the German gar or wahr, (very Eng.)¹: the force of which (much) has been retained in each language, though in French guère is generally supposed to have a contrary meaning. The confusion has arisen from this particle being almost constantly used in negative propositions: thus in Prov. 'Que sciensa no pretz gaire S'al ops no la vey valer,' 'As I do not value knowledge much, If I do

¹ See Muratori in quari.

not see it avail in time of need.' 'Non istette quari che trapassò,' 'he was not long before he died,' Boccaccio (Cinonio, c. 121.) 'Et n'eut pas queres demeuré a Sparte, qu'il fut incontinent soupconné, etc., Amyot Plut. Vie 'La plupart des œuvres d'Aristote et de d'Agesilas. Théophraste qui n'estoient pas queres encore cogneus, etc.' Id. Vie de Sylla. Being constantly used in this manner, it appeared to acquire a negative force, independently of the proper negation; and thus while quari in Ital. is explained to mean much, guère in French is explained to mean little. Nevertheless quère is never used by itself with a negative force, like pas, point, personne, and other words which originally being affirmatives in a negative sentence, at first like quère were used constantly with a negative particle, from which they seemed to catch a negative force by contact; and then were employed by themselves as negatives, (Gr. Rom. p. 274, 333. Journ. des Sav. 1824, p. 1801.)

GENS. The Prov. used gens or ges as an expletive particle of affirmation: thus, 'Ella-s fen sorda: gens a lui non atend,' 'She feigns herself deaf: she does not attend to him at all.' 'No-m mogui ges,' 'I did not move at all.' M. Raynouard derives this particle from the Latin gens; in which case it would probably be gent or gen (from gentem;) the meanings of the Latin and Prov. words moreover do not at all correspond: the suggestion of Schlegel², who derives it from the Teutonic ganz (like gaire from gar) is far more probable³, (Gr. Rom. p. 333. Galvani, Poesie dei Trovat. p. 39, n. 1. Orell, p. 303.)

¹ See Orell, p. 303. [Burguy, vol. ii. p. 394.]

² Observations, p. 115.

³ Grimm, vol. iii. p. 749, says that M. Raynouard's explanation is

MICA. Sometimes used unchanged, sometimes modified into miga, minga, and mia in Prov.¹, mica and minga in Ital., mie in French. In Prov. it is always used in negative sentences, to give force to the negation, as 'Pero no desesper mia,' 'wherefore do not despair at all.' In Ital. this is generally the case, as 'Fosse nascosto un dio? Non mica un dio Selvaggio, o della plebe degli dei.' Tasso, Aminta. 'Signor mio, non sogno mica.' Bocc. Giorn. 7, n. 9².

In the following passage, however, of a poem written in the language of the Tuscan peasants, it does not add force to a negative:

> Gli è rigoglioso, come un berlingaccio, Talchè non par, che morir voglia mica³.

In French it has a similar force: 'Mais comme un harenc ne faut mie Que tousjours le bec aye en l'eau,' Basselin⁴.

In Italian it is sometimes used familiarly by itself, with a negative sense, like other particles, which will be presently noticed⁵.

probably incorrect, as a notion of a thing, not a person, is required. He then adds, 'ges must signify something small: in Italian ghezzo is a mushroom, ghiozzo is a little bit.' Schlegel's etymology is, however, confirmed by gaire.

- 1 Gr. Rom. p. 334.
- ² See Annot. 56, to Cinonio, c. 58. Marrini on the Lamento di Cecco da Varlungo, p. 185.
 - 3 Marrini, ibid, p. 103.
- ⁴ Cited by M. Raynouard, Journ. des Sav. 1823, p. 116. See Orell, p. 307. Mie is still used in some familiar phrases: see Dict. de l'Acad. in v. which defines it to be a 'particule négative, qui signifie, Pas, point.' Properly speaking, neither mie, pas, nor point, are negative particles.
 - [Concerning this class of negative particles, formed from affirm-

NEC. Ne and ni in Prov. and French, ne in Ital., In Prov. ne or ni sometimes retained its ni in Span. Latin sense of a negative disjunction, as 'Davans son vis nulz om no-s pot celar; Ne eps li omne qui sun ultra la mar.' 'Before his face man can conceal himself, nor even the men who are beyond the sea.' 'Non avent macula ni ruga,' 'not having stain nor wrinkle.' Now where a negative precedes a disjunctive negative particle, the repetition of the negation is unnecessary to the sense, though it may add force to the expression: thus it is the same thing to say 'he has neither wife nor children,' or 'he has not wife and children.' Hence as nec is composed of et non, in such cases as that just described it was indifferent whether it was understood to have an affirmative or a negative sense, and thus it vacillated between the two, in Prov. generally having the former, and being synonymous with et: thus St. John, viii. 14 is translated 'Quar ieu sai don venc ni on vauc.' This use never became common in any other Romance language except the Provençal: instances of it, however, occur both in old French and Ital., as 'Dès que Diex fit Adan ne Eve.' 'Se gli occhi suoi ti fur dolci ne cari,' Petrarch¹. This use of ne still prevails in the Piedmontese and Lombard dialects, (Gr. Rom. p. 329-30. Comp. p. 347.)

Non. Preserved without change of meaning in all the Romance languages. The Prov. used both non and no in the same manner as the Latin non. The Ital. has both forms: but it uses the former in connection with

ative substantives, see Diez, Rom. Gr. vol. ii. p. 447, vol. iii. p. 412. Ampère, p. 273—6. Burguy, vol. ii. p. 352.]

¹ See Cinonio, c. 178, s. 2, 4, 7. Perticari, *Dif. di Dante*, c. 18, vol. ii. p. 373.

other words, as 'non è là;' 'non lungo tempo dopo;' the latter as an answer, as 'Sta dentro? No¹.' The Spannow only uses no: it formerly had the full Latin form. The French has non: but the other form no has been attenuated into ne, like lo into le, (above, p. 56².)

A very peculiar use of the particles si non 'except' occurs in all the Romance languages: not only are they used together, as in Latin, but they are often separated by several words interposed: thus

Tant es mortals lo danz, che no i a sospeisson Que jamais si revenha, s'en aital guisa non Qu'om li traga lo cor.

'The loss is so great that there is no suspicion that ever it can be repaired, except, in such guise, that they take his heart, etc.'

So in Ital. 'Nullo è buono s'ello è buon no,' and in Span. 'De al no li membraba si de esto solo non.' In old French it is of frequent occurrence: thus 'Maintes gens dient que en songes N'a se fables non et mensonges'.'

Maintes gens vont disant que songes Ne sont que fables et mensonges.

By which means (says M. Raynouard, Gr. Comp. p. 364,) he changed fables and mensonges from the singular to the plural number. This appears to be an oversight: fable, from fabula, had not the final s in the singular number, but took it in the plural, which was modified from fabulas.

¹ See this difference explained in the Philol. Museum, vol. ii. p. 322.

² See Grimm, vol. iii. p. 746.

³ These two verses are taken from the beginning of the *Roman de la Rose*, which were modernized as follows by Marot, in an edition of that poem published by him in the sixteenth century:

'Il ne parle se de toi non,' (Gr. Rom. p. 332. Comp. p. 348—50.)

Passus. The Prov. used pas as an expletive particle. but always with a negation, as 'non pas dos jorns ni tres,' 'not two days nor three.' The French, as is well known, has the same use of this particle. In both languages it appears to have obtained this sense from being originally used with verbs of motion, as 'ne bougez un pas,' or 'ne bougez pas,' 'do not stir a step;' and this being equivalent to 'do not stir at all,' by a process of abstraction of perpetual occurrence in the use of words, it was transferred to other verbs in the more general sense: and thus it was said, 'je ne l'aime pas,' 'je ne veux pas,' 'I do not love him at all,' 'I do not wish it at all,' 'non pas,' 'not at all.' Being constantly used in negative propositions, pas thus seemed to have itself a negative sense, and by degrees came to be used independently as a negative particle: thus 'pas un,' 'pas mal,' 'pas souvent, 'not one,' 'not ill,' 'not often,' for 'non pas un,' 'non pas mal,' 'non pas souvent,' 'not even one,' 'not at all ill,' 'not at all often,' (Gr. Rom. p. 335. Orell, p. 313.)

Persona. Both Ital. and French use this substantive for alcuno and aucun in both affirmative and negative phrases, as 'Guatiam per l'orto, se persona ci è, e s'egli non c'è persona, che abbiamo noi a fare, etc.' Boccaccio, Nov. xxi. 14. So in French, 'Si jamais personne est assez hardi pour l'entreprendre, il réussira,' 'Personne ne sera assez hardi,' i. e. 'any person will not be bold enough,' in other words 'No person will be bold enough.' From being used frequently in negative propositions, personne has sometimes a negative sense: thus 'Y a-t-il

quelqu'un ici? Personne,' i. e. 'Personne n'est ici,' 'a person is not here.'

Punctum. This was adopted as an expletive affirmatory particle, as signifying a very small quantity, like mica or mie a grain of salt, goutte a drop, brin a small leaf¹, and in English 'not a jot,' 'not a bit,' 'not a morsel,' etc. In Ital. it is sometimes used in affirmative, sometimes in negative propositions, as 'Qual di questa greggia S'arresta punto giace poi cent' anni.' Dante, Inf. xv. 37. 'Who ever stops an instant.' 'A cui il pelegrin disse: Madonna, Tebaldo non è punto morto.' Bocc. G. 3 nov. 7. Hence it sometimes denies without a negative particle, as 'V'è egli piaciuto quello stile? Punto,' i. e. 'not at all².' In French from being used in

¹ These words are used familiarly in the very same manner as pas, point, mica, punto, and other expletives, as in the phrases, 'ne voir goutte,' 'n'entendre goutte,' 'il n'y en a brin.' See Dict. de l'Acad. in v. The Bolognese has likewise an expletive of this kind, as is explained in the following extract from a dictionary of that dialect:

^{&#}x27;Brisa. Voce rimarcata da' forestieri, per cui in vece di nomar Bologna la citta del sipa, la direi piuttosto la città del brisa. Equivale al point o pas de' franzesi, e s'usa da noi in tutti i casi, in cui da essi si adopera. Corrisponde al punto de' Toscani. Detto assolutamente vale la negativa, e sempre in rispondendo ad altri, p. e. Sei stato nel tal luogo? Brisa. No (Point du tout.) Nel discorso poi serve di riempitivo come il point de' Francesi. An'i n'è brisa. Non ve n' pa punto (il n'y en a point.)—An'i n'è brisa brisa. Non ve n' ha punto punto (il n'y en a point du tout.)—An'i sòn brisa sà. Non ve n' ha punto stato (je n'y ai pas été.) An' ho brisa sèid. Non ho sete (je n'ai point de soif.)—Brisa si volge molte volte in Toscano col mica nello stesso modo che noi diciam mega. Al n'è brisa vèira, al n'à mega vèira. Non è mica vero.—Brisa sembra aver origine da brisla, che vale briciola; siccome briciola significa quasi niente.' Ferrari, Vocabolario Bolognese, p. 45, (Bologna, 1820.)

² See Tommaseo, Nuovo Diz. dei Sinonimi della Ling. Ital. in mica. And Cinonio, c. 205.

order to give force to negative propositions, as 'il n'est point mort,' 'il ne s'arrête point,' 'he is not by any means dead,' 'he does not stop at all,' it contracted, like other words already mentioned, a negative sense, and was used by itself as a negation, as 'point du tout,' 'not at all.' 'Lisez vous ces vers? Point.' 'Are you reading those verses.' By no means.'

RES. This substantive was retained unchanged in the Prov., making res in the nominative, and ren or re in the accusative case. Thus 'Qu'ieu non soi alegres per al, Ni al res no-m fai viure,' 'For I am not joyful for another, and another thing does not make me live,' i.e. 'no other thing makes me live.' (Gr. Rom. p. 152.) 'Ieu am la plus debonaire Del mon mais que nulla re,' 'I love the fairest woman in the world more than anything. (Ib. p. 76.) 'Nuls homs ses amor ren non vau,' 'No man without love is (not) worth anything.' 'Ja ren non dirai,' 'Never will I say anything.' (Ib. p. 333.) 'Res mas merces no i es a dire,' 'Anything except mercy is not wanting,' i.e. 'nothing except mercy is wanting.' (Ib. p. 337.)

The Ital. used the accusative case of res, doubtless first changed into ren and rien¹, in the same manner; but subjected it to farther alterations, by adding a paragogic syllable, as in come, comente, che, chente, already observed², by which means it became riente; and by changing r into n, (as in the Span. hombre, nombre, lumbre,

¹ Perticari, Dif. di Dante, c. 15, p. 334, n. 4, says that the Italians used rien, referring to the Cento Novelle Antiche, No. 61. In c. 21, however, p. 413, n. 6, he shows that rien in that place is a [Provençal, not an Italian word, which occurs in a Provençal song introduced by the novelist, and he blames Lombardi for introducing it into the Vocab. della Crusca on the authority of that passage.

² Above, p. 201.

from hominem, nomen, lumen 1,) which made it nientes. Niente sometimes retains its ancient affirmative sense, as 'Rispose che egli non ne voleva far niente.' Bocc. Giorn. x. nov. 2. 'Et in questa maniera fece due notti, senza che la donna di niente s'accorgesse.' Bocc. Giorn. 2, nov. 9. Sometimes it has a negative sense, acquired in the manner already explained with respect to other words, as 'Ma fin a qui niente mi rileva Pianto o sospiro o lagrimar ch'io faccio.' Petrarch, P. 1, canz. 1. 'El fuggir val niente Dinanzi a l'ali, che'l segnor nostro usa.' Petrarch, (Cinonio, c. 181.) The rule at present established in Ital. with respect to the use of niente is, that where it precedes the verb, it has a negative, where it follows, it has an affirmative, sense: as 'niente ho,' 'I have nothing,' 'non ho niente,' 'I have not anything.' In answer to a question, moreover, niente has a negative sense: as 'cosa fate? Niente.' 'What are you doing? Nothing.'

The old Span. likewise used the accusative ren from res: thus Milagros de N. Señora, v. 195.

Vidien que de ladrones non era degollado, Ca nol tollieron nada nil avien ren robado.

Also v. 293.

Cata non aias miedo, por ren non te demudes, Piensa como me fables è como me pescudes.

¹ See above, p. 71, note ¹.

² Rien and niente from rem are like miei from mei, Dieu from Deus, etc. Muratori in v. rejects the absurd derivation of niente from me ens; ens was a scholastic, not a popular term. The French néant appears to come from negans: 'a negative quantity.' See Orell, p. 309.

³ Sanchez, vol. ii. p. 311—324.

The use of rien in French is precisely analogous to that of niente in Italian. Sometimes it retains its original affirmative sense, as 'Y a-t-il rien de si beau que cela.' 'Il ne sait rien de rien,' i.e. 'he knows nothing of anything.' But from being used after ne, it has itself acquired a negative force, and sometimes means nothing instead of anything, as 'Dieu a créé le monde de rien.' 'On ne fait rien de rien,' i.e. 'Ex nihilo nil fit.' 'Qu' avez vous trouvé? Rien.'

Sig. This word, changed into si^2 , became the affirmative particle of the Ital. and Span.: in French it is still often employed in familiar style³, and it also occurs in the old Prov.: thus in the Nobla Leyçon:

La ley velha deffent solament perjurar, E plus de si o de no non sia en ton parlar.

The last line being a translation of St. Matthew, 'and let thy conversation be yea, yea, nay, nay.' (Gr. Rom. p. 312. Comp. p. 346.)

It is known that the difference of the affirmative particle was used to distinguish the three Romance languages, of Italy, northern and southern France: the former being called the language of si, the latter of oil and oc. The agreement of all these languages in the use of si may therefore seem a proof of their derivation from a language posterior to the Latin, in which this particle had a

¹ Schlegel's Kritische Schriften, vol. i. p. 358. On rien, used in old French as a feminine substantive for chose, see Orell, p. 70.

² Grimm, Deutsche Rechtsalterthümer, p. 606, cites a formula from the Lombard laws: 'Spondes ita? Sic facio,' comparing the French si fais and the Italian si.

^{* [}See Burguy, vol. ii. p. 391.]

different sense. It is, however, easy to conceive that the use of the Latin sic for yes should have been introduced by the Germans, with whom so had a familiar sense; or that sic should have been used without reference to the German practice, as the Latin formerly employed ita, a nearly synonymous particle. But although the languages of oil and oc sometimes used si in the same sense as the Italian, yet they had other particles which they commonly used in that sense. The characteristic of the Italian, as opposed to the languages of France, was not that it used si, but that it used si alone; the characteristic of the languages of France, as opposed to that of Italy, was not that they did not use si, but that they commonly used oil and oc, particles of which no trace is to be found in any Italian dialect.

The Bolognese dialect has been characterized by its use of sipa:

E non pur io qui piango Bolognese: Anzi n'è questo luogo tanto pieno, Che tante lingue non son ora apprese A dicer sipa tra Savena e'l Reno.

Dante, Inf. xviii. 58.

Sipa or sepa, however, now no longer in use, is a peculiar form of sia, and is not connected with si¹: though it appears evidently to have been used as equivalent to si, since Dante elsewhere takes this affirmative particle as the distinguishing mark of a language.

With regard to the affirmative particles oil and oc, it cannot be doubted that they are both derived from the form o, which was used in old French. Oil is doubtless

¹ See Menage, Orig. Ital. in sipa. Ferrari, Vocab. Bologn. in sepa.

formed by the addition of the pronoun il, like nenil from non or nen. Oc is considered by Grimm as equivalent to $j\hat{a}$ ich: an etymology of which the probability is much increased, if, as Grimm suggests, and as appears likely, the Romance o is borrowed from the German $j\hat{a}^1$. Should this explanation be received, the adoption of a German affirmative particle in France, while in Italy and Spain a Latin word was used for this purpose, must be considered as a proof of the greater amount of German influence in the former than in the latter countries.

The modern French oui appears to be formed from oil by dropping the final l, as nenni from nennil, the o before i being pronounced like ou, as Louis, anciently Loys². The final l has in French commonly passed into u, as scel, sceau, morcel, morceau³: but if oil had suffered a change of this kind, it would have become oiu, and not oui.

Among the particles which have been just enumerated it will be observed that several having originally had an affirmative sense, and having been introduced into negative propositions for the sake of strengthening the negation, in process of time themselves contracted a negative force. Negation may, as Grimm states, be strengthened in two ways: either by a repetition of the proper negative

¹ Grimm, vol. iii. p. 768. See *Philol. Museum*, vol. ii. p. 324. Some instances of the change of the broad a into o are mentioned there, p. 326. [Burguy, vol. ii. p. 809, 407—9, approves of the derivation of oil from o and il. He rejects the derivation of oc from the Latin hoc, and thinks that the origin of the word is quite uncertain.]

² This is satisfactorily proved by Biester on oc and oyl, Philol. Museum, vol. ii. p. 342, cf. ib. 324.

³ See above, p. 138.

particles, or by the addition of a positive word. With regard to the latter of these he remarks: 'A positive expression may sometimes expel and replace the simple negation: the proper negative force of the lost negative particle then falls upon it, and it denies by means of it, as the moon shines with borrowed light. Such words, however, though not properly negative, must yet originally have some natural fitness for expressing negation. Words of this kind commonly convey a notion of smallness, and as it were of nullity. At first they appear to have suggested a sensible image, which afterwards was lost, and a mere grammatical abstraction remained1.' The introduction of words signifying small, insignificant, worthless and mean objects, prevailed to a great extent in the old German, and numerous examples of this usage are cited by Grimm from poets of the thirteenth century. Among these are blat, a leaf, bast bark, ber a berry, strô a straw, bône a bone, nuz a nut, ei an egg, brôt a loaf of bread, drof a drop, hâr a hair, fuoz a foot, twint a twinkle, wiht a thing, etc.2 For the most part these words were used after a negation: as 'daz hulfe niht ein blat;' 'wan ez half niht ein bast;' 'ich wære niht einer bone wert.' Sometimes, however, the same word occurs both with and without the negative particle, as 'dat halp allent nicht ein stôf, (i.e. stoup, an atom,) with the negative particle; but 'ez was in allez ein stoup,' without it. It appears probable, as Schlegel³ had remarked before Grimm, that

¹ Grimm, vol. iii. p. 726—8.

² Grimm, vol. iii. p. 728—40. [Similar expressions are cited from the classical Latin writers by Diez, Rom. Gr. vol. iii. p. 412.]

³ Observ. sur la Litt. Prov. p. 34. Schlegel's remark is, however, limited to the French language.

the system of expletive particles in negative phrases was formed in the Romance languages on the model of the German idiom: as in the Latin there are no traces of any idiom to which the usage in question can be referred. The Italian has some, but not many, particles of this kind, viz. mica, niente, persona, punto, derived from Latin words, and quari from a German word. The Provencal has pas, ren, mica, from the Latin, gaire and gens from the German. The Spanish does not appear to have any particles belonging to this class. The French, on the other hand, formerly luxuriated in the use of this idiom: among the instances cited by Grimm, are gant, ail, feuille, oef, pome, poire, bouton, etc.2 Mie, goutte, and brin, still retain a certain currency in the same manner: but pas. point, quère, personne, and rien, are in constant use, and show in the clearest manner the transition from the affirmative to the negative sense.

The Romance and Teutonic words of this kind often correspond in their meaning, as pas and fuoz, drof and

¹ However, it is possible that in the case of this idiom, as of others which have been incorrectly derived from the influence of the German, (above, p. 25,) the change may have developed itself in the spontaneous working of the language: for analogous changes have taken place in several Greek words, as I am informed by a friend who is well acquainted with modern Greek. Thus καθόλου and ποτέ have, as answers to a question, a negative sense, (precisely analogous to point du tout and jamais:) for example, σας άρέσει ἐκεῖνο; καθόλου. 'Does that please you? Not at all.' Σταθήκατε πότε είς τὰς 'Αθήνας; ποτέ. 'Have you ever been at Athens? Never.' So in other words: μας Φέρετε τίποτε νέον; ένα τίποτα. 'Do you bring us any news? None,' (i.e. un rien, a mere nothing.) Twac is used for 'no one: also κανένας, μὲ κανένα τρόπου, 'in no wise:' παντελώς, 'by no means:' ολότελα, 'in no way,' (sometimes used affirmatively:) ἀκόμη means both 'again,' and 'not yet.' . ² Grimm, vol. iii. p. 750.

goutte, oef and ei, blat and feuille, though this cannot be considered as a proof that the one is derived from the other. It will be observed that nihil has not been retained in any of the Romance languages, three of which have agreed in substituting for it a derivative of res, preceded by a negative particle, in the same manner that the German nichts or nicht was formed from nivaihts or niowiht, nothing.

The other mode of strengthening a negation, viz. a repetition of the negative particles, likewise occurs in the Teutonic languages²: whence it was probably derived to those formed from the Latin, as will appear from the following examples.

Nullo, niuno, and nessuno in Ital., neguns and nuls in Prov., are equivalent to nullus and nemo in Latin, and thus they are often used: nevertheless a negative particle is often added to the proposition, the sense remaining the same, contrary to the rule that two negatives make an affirmative. Thus in Ital., 'non dice nulla,' 'non v'è niuno,' 'non è neuna cosa sì bella che ella non rincresca altrui,' Bocc. 'Che Annibale non fusse maestro di guerra. nessuno mai non lo dirà,' Machiavelli, Disc. iii. 10. Provencal, 'Negus vezers mon bel pensar no-m val,' 'No sight is (not) worth to me my thoughts.' 'Nuls hom non pot ben chantar sens amar,' 'No man can (not) sing well without loving 3.' All of which are affirmative, not negative propositions. Now in Latin the use was in this respect completely reversed: non-nullus meant some. nonnemo meant somebody; and whereas 'non c'è nessuno' is

¹ Grimm, vol. iii. p. 748.

² Grimm, vol. iii. p. 727.

³ Cinonio, c. 180, 188. Rayn. Gr. Rom. p. 149.

in Italian a negative, 'non nulli adfuerunt' is in Latin an affirmative proposition. The confusion has indeed gone a step further, and as affirmative particles, such as mica, niente, rien, pas, point, etc. by being continually used in negative sentences acquired a negative sense; so the negative pronouns by being used after a negation which absorbed their own meaning, retained only an affirmative force. Thus Machiavel says in the preface to his History: 'Se niuna cosa diletta o insegna nella istoria, è quella che particolarmente si descrive,' that is, if anything.

On the other hand, affirmative terms sometimes contract a negative meaning, and make a proposition negative which in its form is affirmative. Of this we have seen many examples in the words, niente, rien, personne, etc.: but these are not the only instances of such a change. Thus mai in Ital., which properly signifies ever, from being used in negative sentences, came to signify never: thus 'Ti priego che mai ad alcuna persona dichi d'avermi veduta, Bocc. G. 2. n. 7, i.e. 'non mai,' never'. So in French, 'Avez vous jamais été là? Jamais.' 'Have you ever been there? Never.' Veruno in Italian is another word of this kind, which, though properly synonymous with aliquis, sometimes has a negative sense: thus 'I peccati veniali in verun modo si perdonano sanza i mortali,' i.e. 'in no way'.' Whether alcuno in Italian ever had a negative meaning seems doubtful3: in French,

¹ See other instances in Cinonio, c. 164, s. 2.

² Cinonio, c. 250. Veruno appears to be derived from vel unus, in the same manner that medesmo came from met ipsissimus, and dimentre from dum interea. Thus, for example, such a sentence as 'ut non vel unus sciret,' might be rendered in Italian by 'che non veruno sapesse.'

³ See Cinonio, c. 13, s. 6.

however, aucun frequently denies; as, Ce livre mérite-t-il aucune confiance? Aucune,' i. e. None¹.

The use of expletive particles in negative propositions, their subsequent assumption of a negative sense, the repetition of negative particles, and the confusion of affirmation and negation which prevail in the Romance languages, have all been introduced since the Latin, in which none of these idioms are to be observed. Nevertheless the comparison just made proves that there is only an analogy, and not an identity in the words which have undergone these changes, and that the conformity is to be accounted for, not by deriving one idiom from the other, but by referring them all partly to the disposition (which appears to be general to all men) to strengthen negation by additional words, and to confound affirmative and negative meanings: partly to the existence of the idioms in question among the nations who mixed their languages with the Latin.

It is moreover to be remarked that in the Spanish language (as far as I am aware) expletive particles of affirmation are not used in negative propositions, that consequently these particles have never acquired a negative sense, and in general that there are fewer examples

Qu' aucuns monstres par moi domtés jusqu' aujourd'hui Ne m'ont acquis le droit de faillir comme lui.

(Act i. sc. i.)

Where the commentator says: 'aucun signifiant nul, pas un, ne peut s'employer au pluriel, si ce n'est avant les mots qui n'ont pas de singulier, ou qui dans certain sens doivent nécessairement être au pluriel.'

¹ The present rule with respect to aucun is that its negative sense is limited to the singular number, with certain narrow exceptions. Racine, in the Phèdre, has the following couplet:

of the confusion of negation so common in its sister tongues. Thus the Spanish does not use a negative between the comparative and the verb, like the Provençal, Italian, and French; and the words nada and nadie, though their derivation is not very obvious, appear at any rate to be allied to the negative particle no, and not like niente, rien, and personne, to have a negative force, having originally been affirmative terms.

In reviewing the various prepositions, adverbs, and particles, compared in this chapter, it appears that although the several languages sometimes agree in remarkable deviations from the Latin, as in making pres and presso from prope, sens and senza from sine, and in introducing new words not found in the Latin, as the adverbs malgrat and malgrado, tost and tosto, trop and troppo: yet the Italian, the Spanish, and the French, and especially the two former, exhibit peculiarities which could not have been borrowed from the Provençal, and could not have been derived from any other source than the Latin itself. Thus the Ital. has preserved apud, circa, infra, and eccum, which the Prov. has lost: so likewise the Ital. and Prov. in modifying the Latin forms followed the different analogies respectively observed by them in other parts of speech: thus from subtus, versus, minus, pejus, secundum, jusum, susum, medium, the Ital. made sotto, verso, meno, peggio, secondo, giuso, suso, mezzo, like petto and mostro from pectus and monstrum: whereas the Prov. made sotz from subtus, ves from versus, mens from minus, pietz from pejus, like amatz from amatus: and segont from secundum, miei or mieg from medium, jos and sos from jusum and susum, like amic from amicum. It will be observed. moreover, that the Ital. retained in many words the final Latin vowel unchanged, which the Prov. either modified or cut off: thus intra and sopra Ital., intre and sobre Prov.; sovente, onde Ital., sovent, ont Prov.; fuori, hieri, assai Ital., fors, hier, assatz Prov. Sometimes also a Latin consonant which had disappeared in the Prov. was preserved in the Ital.: as from hodie and ibi. hoggi and ivi Ital., oi and i Prov. The Prov. likewise has several peculiar words, such as the derivatives of aliquoties and aliorsum, and the use of gens as an expletive in the sense of 'something:' the adverbs pron, moreover, and pas employed as an affirmative (or negative) particle, are common only to the French with the Prov., and are wanting in Ital. and Span. If, however, the Provençal had been the mother tongue of the Italian and Spanish. it is inconceivable that they should have preserved traces of the Latin, which the other had not: and it is very improbable that there should be any words peculiar to the original language, and not retained in any of the various dialects which, according to the supposition, sprung from it. It would be easy to carry this analysis further, and to point out other peculiarities in the latter languages, which could not have been derived from the Provencal: but enough has been said to illustrate the differences now in question, and to indicate the numerous difficulties to which M. Raynouard's theory is liable. I will only in conclusion remark, that with respect to the indeclinable parts of speech last examined, the Spanish departs widely from its sister languages, and bears strong marks of an independent origin.

§ 4. CONCLUDING REMARKS ON M. RAYNOUARD'S HYPOTHESIS.

M. Raynouard concludes his proofs of the derivation of the Italian, Spanish, and French, from the Provençal, by collecting several peculiar idioms not traceable to the Latin, in which these languages agree, as the use of avere instead of essere, of lasciare stare, far la fica, aver nome¹, etc. This kind of proof has been much insisted on by Perticari, who has collected a long series of corresponding idioms and expressions in Italian and the language of the Troubadours², which is interesting as

¹ Gr. Comp. p. 351—61. The expression nomen habere is, however, Latin, as M. Raynouard himself shows:

Est via sublimis, cœlo manifesta sereno,

Lactea nomen habet, candore notabilis ipso.

Ovid. Met. 1, 168-9.

² Dif. di Dante, c. 13-19. The reader must, however, be on his guard against an artifice practised by Perticari, in order to render the resemblances which he points out more striking, by assimilating the inflexions and terminations, as well as the syntax. In almost all the passages which he quotes, he obliterates the more salient peculiarities of the Provençal, and brings the forms nearer to the Italian, without informing his readers that the words are not faithfully transcribed, and then he calls on them to observe how close the Provençal is to the Italian. Thus in his very first example, c. 13, taken from the poem on Boethius, he says: 'questi sono versi citati dal dottissimo Renuardo:

D'avant son vis null' om non se pot celar, Nè ess li omen chi sun ultra la mar.'

Which by adding the final vowels becomes, as he says, Italian:

D' avanti 'l suo viso null' omo non si pote celare, Nè essi li omini che son oltra 'l mare.

Vol. i. p. 318.

throwing light on both those languages, and as showing the close affinity which subsisted between them, but which cannot be considered as proving the derivation of one from the other, more than a table of parallel idioms in German, Dutch, and English, would prove the mutual dependence of those three sister languages. The close analogy between many of the idioms, no less than between the words and forms of the Romance languages, for the most part arises not from their propagation from one language into another, but from the similarity of effects produced by similar causes. Not only were the circumstances attending the mixture of the conquering and conquered populations similar all over western Europe, (as has been before explained,) but all the kingdoms

Now in M. Raynouard's Gr. Rom. p. 330, these verses are cited thus:

Davan son vis nulz om no s pot celar, Ne eps li omne qui sun ultra la mar.

There is no wonder that these verses should pass so easily into Italian. when they had been prepared for their reduction by taking away all that characterizes the language in which they were written: and even after Perticari had restored the Provencal contractions to their fuller form by writing d'avant for davan, and non se for no-s, after he had introduced the Italian variations ess for eps, omen for omne, chi for qui, and after he had suppressed the final s retained from the Latin, the distinctive mark of the Provençal nominatives, by writing null' (meaning nullo) for nulz, he was unable to get rid of son instead of suo and la mar instead of il mare, with the gender changed, as in Spanish and French. (See above, p. 113-14.) Numerous other instances of changes of this kind in passages cited by Perticari (which I fear could not have been unintentional) are collected by Galvani, in his collection of Troubadour poetry, p. 504-20. M. Raynouard, whose good faith and accuracy in citation cannot be exceeded, probably did not perceive that Perticari had garbled the passages which he quoted, when he referred to that writer as an authority, without cautioning the reader against his misrepresentations.

created by the invaders had nearly the same form of government, the same system of laws, the same religion, the same manners; they existed in the same age; and a frequent communication both in peace and war, was reciprocally kept up between them, especially among the class of writers, whether chroniclers, theologians, or poets. In this state of things similar phrases would not unnaturally be suggested by similar wants, and by similar ideas: and some expressions likewise would doubtless pass from one language to the other (as we see at the present day,) though their number would probably be inconsiderable as compared with those of native growth, and would chiefly be confined to poets and other writers in an exotic style¹. Any resemblance, therefore, whether of words, forms, or idioms, in the Romance languages, is quite compatible with the supposition that they were derived immediately from the Latin: whereas any marked dissimilarity between the Provençal and any other modern language is incompatible with the supposition that the latter is derived from the former. Thus it may be remarkable that the futures of all the modern verbs should be formed by adding the future tense of habeo to the infinitive mood of the verb: nevertheless it is conceivable that this mode of formation should have been adopted independently by different languages: but it is inconceivable that the Ital. hebbi or hebbero, the Span. hube and hubiéron should have been formed from agui or aic, aqueron or aqueren, the first person singular and the third

¹ See above, page 146, on the introduction of Italian words into French. Some likewise appear to have been borrowed from the Spanish, as salade, limonoide, esplanade, estrade, etc. Salade if formed according to the French analogy would be salée.

person plural of the perfect of aver, whereas they might all three be independent corruptions of the Latin habui and habuerunt. A comparison of the Romance languages with the Latin will probably convince any person who examines the relations with an unbiased mind, that the Italian is in every respect nearer to the Latin than any of its cognate tongues; that it has retained the most Latin words, and subjected them to the fewest and least considerable alterations of form. Next to the Italian,

¹ Passages which are at once Italian and Latin serve to show the close affinity of the two languages. The following couplet is well known:

In mare irato, in subita procella Invoco te, nostra benigna stella.

Matthews, Diary of an Invalid, c. 10, adds these verses:

Vivo in acerba pena, in mesto orrore, Quando te non imploro, in te non spero Purissima Maria, et in sincero Te non adoro et in divino ardore.

The following address to Venice is a still longer composition:

Te saluto, alma Dea, Dea generosa.

O gloria nostra, o Veneta regina!
In procelloso turbine funesto
Tu regnasti secura; mille membra
Intrepida prostrasti in pugna acerba.
Per te miser non fui, per te non gemo;
Vivo in pace per te. Regna, o beata,
Regna in prospera sorte, in alta pompa,
In augusto splendore, in aurea sede.
Tu serena, tu placida, tu pia,
Tu benigna; tu salva, ama, conserva.

(Cited in the Journ. of Education, vol. vi. p. 260,)

Although these passages were doubtless composed in order to show the coincidence of the two languages, I question whether it would be possible to do as much in any other modern language derived from the Latin.

The Latin language probably remained longer in current use in Italy, especially in the central and southern parts, than in any other

though after a long interval, comes the Spanish, which has not so much changed the Latin form, as it has lost numerous Latin words preserved in Italian. After the Spanish is the language of oc, which has clipped the Latin standard much more closely than the two former languages, especially the Italian, and has not only rejected many vowel terminations which the others have preserved, but has introduced various contractions in the body of words which the others have not admitted. Last of all comes the language of oil, which had at a very early period undergone the considerable modifications which may be seen in the modern French, and which caused it to be opposed as a distinct Romance dialect to the language of oc. Nevertheless in tracing the French language to its present form, it appears evidently to have passed

part of western Europe. Of this we have a proof in the two Latin songs composed in 871 and 924 A.D. referred to by M. Raynouard, (Gram, Comp. p. L.) which must have been understood by a large number of persons. (See above, pp. 58, 59.) Dante likewise introduces Cacciaguida in the Paradise as addressing his descendant in Latin (xv. 28-30,) and afterwards he says that Cacciaguida spoke to him 'con voce più dolce e soave, Ma non con questa moderna favella,' xvi. 32, which Daniello explains to mean 'that Cacciaguida spoke not in Italian but in Latin, as was the custom of persons of some education in his time.' It was this practice which made it so difficult to eradicate the use of Latin from the modern literature of Italy, and which even to a great degree banished the Italian from books after the age of Dante, Petrarch, and Boccaccio: it would, however, be absurd to suppose that in Cacciaguida's time the lingua volgare was not as much the language of the volgo of Florence as it is at the present day. The practice of preaching in Latin to mixed audiences prevailed in Italy so late as the sixteenth century: M'Crie's History of the Reformation in Italy, p. 51. Compare Wachsmuth in the Athenæum, vol. i. p. 287 note.

¹ Parmi les langues modernes, la langue française est celle qui a éprouvée le plus de variations. Raynouard in *Journal des Sav.* 1818, p. 282.

through a stage little different from the language of oc, as preserved in the poems of the Troubadours: thus these two languages agreed in marking, in nouns and participles not ending in a, the nom. sing. and the acc. plural by the presence of s, the acc. sing. and nom. plural by the absence of s'; and in forming the plural of feminine nouns

1 M. Raynouard, at the end of his Gram. Comp. p. 389-94, considers what would have been the effect on the literature of France, if the French court had been established in a town south of the Loire. and the langue d'oc had become the language of government; and he appears to regret that the fates of the two languages of oc and oil had not been reversed, and the former had become the subordinate instead of the superior dialect. If one is to judge from the modern Provencal what would have been the present form of the French language under the circumstances supposed, it is difficult to assent to M. Raynouard's opinion. The language would doubtless have taken a more perfect form than it now bears in the southern patois, if it had been cultivated by the chief writers of France: but it would unquestionably have lost many of the advantages which M. Raynouard ascribes to it, and which induce him to give it the preference over the language of oil. Thus he says that it would have had the power of distinguishing the subject and regimen in both numbers, by the absence or presence of a final s; and he instances a verse of Thomas Corneille:

Le crime fait la honte et non pas l'échafaud,

which by means of this distinction would have lost its ambiguity, being written.

Le crimes fait la honte et non pas l'échafauds.

I will say nothing of M. Raynouard's inconsistency in extolling the superiority of the modern Romance languages over the Latin as being free 'from the slavery of declensions,' (above, p. 57.) and yet preferring the ancient Provençal to the modern French on the very ground of its possessing declensions: but I would remark that M. Raynouard appears to forget that the distinction of cases which he points out existed equally in ancient French, in which it has been lost, as it has likewise been lost in all the dialects of the language of oc. This advantage, therefore, which he finds in the language of oc would doubtless have disappeared if that language had become predominant in France, and it also existed in the langua d'oil. The final s, moreover, in the

in a from the Latin accusative: in both which points the Ital. and Span. differ, as well from these two languages as from each other. Hence when M. Ravnouard selects passages from Ital., Span., and French writers, which are at once Ital. and Prov., Span. and Prov., French and Prov., he is forced in the former to confine himself to sentences, such as 'la vista angelica serena per subita partenza,' in Petrarch, where are only singular feminine nouns in a; for passages containing masculine nouns either singular or plural, (unless the terminations are cut off,) and feminine nouns in the plural, would have immediately betrayed the characteristic differences of the two languages. In Spanish he is less confined, for he can there cite not only the singular but also the plural of nouns in a, (as 'mas son que arenas in riba de la mar' from Berceo,) since the Spanish, like the Provençal and unlike the Italian, forms its feminine plural from the Latin accusative. In old French, on the other hand, he has a wider field; for there is a strong resemblance between the languages of northern and southern France, and it is easier to find passages where even in their later form they agree, than to establish any characteristic distinction between them in their earlier form1.

However singular the close concordance of the languages of oc and oil may appear, as well of the Romance languages in general, without the hypothesis of their mutual dependence, or their common derivation from a language already corrupted from the Latin; yet the

verse of Corneille would be a distinction only to the eye, and not to the ear, like the s of the French plural: anciently the last letter of *Thiebauz*, chascuns, etc. was doubtless pronounced as well as written, like the modern fils.

¹ Gr. Comp. p. 376—84.

English and Scotch offer an analogy of languages between which there is the closest resemblance, but which were nevertheless formed independently of each other. Both in England and the Lowlands of Scotland the Norman invaders found an Anglo-Saxon population, and in both countries a new language was formed by mixing the language of the conquered with that of the conquerors. The further we go back the closer we find the relation between the Scotch and English, both in structure and in words, though each language has peculiarities of its own, which having been more strongly marked in the course of years, at last have created so considerable a difference between the two dialects, that a large part of a Scotch composition is unintelligible to a person acquainted only with modern English.

In reviewing the whole series of proofs collected by M. Raynouard, of the derivation of the Italian, Spanish, and French, from the ancient language of Provence as preserved in the poetry of the Troubadours, it appears to me that he has failed to establish his theory, and that he has shown nothing more than the close affinity which exists between these languages, as being derived from the Latin, their only common origin. Although, however, we may withhold our assent to the inference which he would draw from his premises, it is impossible to be blind to the light which he has thrown on the relations of the languages of which he treats, or to deny the service which he has rendered to the elucidation of the history of the modern dialects of the Latin: nor in the preceding essay do I aspire to any higher merit than of having reconstructed the materials furnished by M. Raynouard himself, into a more consistent theory than that which he formed from them.

APPENDIX.

Note (A.)

Perticari, in his account of the formation of the Italian language, and of the relation which its several dialects bear to one another, perpetually confounds grammatical forms and style. The question is not, whether in early times, writers in other parts of Italy besides Tuscany wrote in an elevated and noble style, avoiding low and plebeian terms, or whether they composed good poetry: but whether the forms of the Italian language, such as it is now, its terminations, contractions, and inflexions, existed in any other dialect except the Tuscan. can be no doubt that in all the north of Italy the same character of language, which prevails now, has prevailed universally from a very early period, even if it has not existed since the Latin settled into its new form¹. dialects of Milan, Piedmont, Bologna, and other towns of northern Italy, are not confined to the lower and middle classes: they are to this day used by the upper classes in their familiar intercourse when no stranger from southern Italy is present. That these were not in the thirteenth and fourteenth centuries the languages of Milan, Piedmont, etc. is by no means proved by alleging a few verses written in the Tuscan Italian by the natives

¹ See above, p. 94-98, 104.

of those countries. It is remarkable to what an extent the power of composition in a foreign language may be acquired. We have abundant proofs of this fact in our public schools, where youths of sixteen or seventeen frequently compose even Latin poetry with a facility, elegance, and correctness, probably far beyond many native Romans who had not cultivated the art of versification. Many foreigners have written in modern languages with complete success, as Manzoni and Schlegel in French, Baretti in English, etc. A century and a half ago, when Latin was the language of Science, most mathematical and physical philosophers probably wrote in Latin with as much facility as in their own languages, although their thoughts were not turned to philological To Newton it would doubtless have been a matter of perfect indifference, as far as the facility of composition was concerned, whether he wrote the Principia in Latin or in English. These instances are sufficient to show that there is not so much difficulty as would at first sight appear, in thinking in one language and composing in another. But when the transfusion of thought takes place, not from languages of a different family, as from German into Latin or French, but from one to another dialect of the same language, as from Milanese or Piedmontese to Tuscan, the process is far easier and simpler. The most that can be conceded to Perticari is that the Italian language, as written by its classical authors, has borrowed its forms in great measure from the Roman, Neapolitan, and Sicilian, as well as from the Tuscan dialect; that it is in fact a refinement of the dialects of central and southern Italy and of Sicily. But even this concession is liable to great objections, as

any person may see who will compare the forms of the Sicilian and Roman dialects with the language of Tasso, for example, or Ariosto, who were not Tuscans. To argue, as Perticari does, that the written Italian was not borrowed from the Tuscan, because the Tuscan has many peculiar terms which are not intelligible out of Tuscany, betrays a complete misapprehension of the true question at issue: the Tuscan no doubt has peculiar words and phrases, but has it any peculiar forms, and have other dialects any forms which occur in the common Italian and do not occur in the Tuscan?

Note (B.)

Meidinger, in the Introduction to his *Dictionary of the Teuto-Gothic Languages*, (Frankfort, 1833,) has the following remarks on the Romance languages.

'The Italian language has for its base the romana rustica or vulgaris (plebeia) of the ancient Romans, which at a later period, after the dominion of the Franks, received the name of lingua franca. It is the mother of all the Romance languages. Among the Romans it formed the popular language properly so called, and the written Latin, as it is at present used. was confined to the upper classes, (lingua nobilis or Introd. p. xlxix. In a note he urbana or classica.)' adds: 'Originally the romana rustica was a mixture of the Pelasgo-Gothic, the Gallo-Celtic, and the Romano-Latin, as may be inferred from the different races which inhabited Italy.' Speaking of the French, he says, that 'the Gaelic or Celtic, mixed with the Romana rustica. formed the Romance language.' He afterwards adds: 'In the thirteenth century there were two principal dialects of the Romance language. These were the Romance language properly so called, or Provençal-Romance, or langue d'oc, spoken in the countries to the south of the Loire and in Catalonia, and 2, the langue d'oil,' p. 1. Of the language of Spain, he says, that 'the modern Spanish, like the French, has for its basis the Romana rustica, which has also undergone numerous changes, and is mixed with Arabic and Gothic words.' p. lii.

In this passage there is scarcely a single proposition to which I am able to assent. In the first place, there appears to be no evidence whatever for the opinion that the Romana rustica or vulgaris was a language distinct in its forms or roots from the Latin, and spoken by the lower classes or the peasants of Italy: still less is there any proof that this language was the base of the Italian. The statement that the lingua Romana rustica after the dominion of the Franks, received the name of lingua franca is equally unfounded: for the lingua franca was the corrupt and truncated language spoken by the various inhabitants of the Romance nations who met in the Levant and in the ports of Greece and northern Africa. and was called lingua franca, as being spoken by the Franks, the general name given by the Mussulmans to Europeans. So far from being identical with the language which formed the base of the Italian, it is itself a mutilated and imperfect form of the Italian, mixed with the Spanish, Provençal, and perhaps other languages. (See above, p. 22, note 1.) Having assumed the existence of this inferior dialect of the Latin, the rustic or vulgar, as opposed to the classical language, or that of the city; he proceeds to account for its origin by the races which inhabited Italy, viz. the Pelasgo-Gothic, the Gallo-Celtic, and the Romano-Latin. What the Pelasgo-Gothic race may be, or how it differs from the Romano-Latin; or how the language of the Romans, so far as it agrees with the Hellenic, differed from that of the Pelasgian part of the 'Pelasgo-Gothic' tribe; I confess myself wholly unable to comprehend. Nor is it very obvious why the Gallo-Celtic race should have produced so powerful an influence on the lingua rustica of Italy, and have produced no influence on its lingua urbana: or how, if the lingua Romana rustica was full of Celtic words, the languages supposed to be derived from it (as the Ital. and Span.) should be nearly destitute of them. It may be here observed, that if, in ancient Italy, the inhabitants of Rome and of the other large towns had spoken a language different from that of the inhabitants of the country, the latter would not have been called the 'lingua Romana rustica:' as at that time the appellation of Romans was not extended to the inhabitants of the entire peninsula. It was only at a much later period when the name of Romani was given to all the provincials, to all the subjects of the Roman empire, that the name of rustic Roman language could by possibility have arisen. (See above, p. 29.)

With regard to the origin of the Romance languages of France, Mr. Meidinger says that they were formed by the mixture of the *Romana rustica* and the Celtic: which is much the same as if any one were to say that the English was formed by the mixture of the Anglo-Saxon and the Celtic: for in both cases the true origin of each

language would be omitted, and a false origin would be asserted. The Latin language of France was transformed into the Romance by the operation of the Teutonic, as the Anglo-Saxon language of Britain was transformed into English by the operation of the Norman French: nor had the Celtic, the native language both of Gaul and Britain, exercised any influence on either language before the invasion of Gaul and Britain by the Teutons and the Normans. There is not (as far as I am aware) any instance of a Celtic having been amalgamated with either a Teutonic, a Latin, or a Romance language: a remarkable circumstance, when the diffusion of the Celts over the whole of western Europe is considered.

As to Mr. Meidinger's account of the Spanish, it is not easy to understand why he should have mentioned the influence of the Gothic invaders on the Romana rustica of Spain, while he makes no mention of any influence exercised by the Teutonic invaders of France on the Romana rustica of that country. Moreover the influence of the Arabic on the Romance of Spain was by no means equal to that of the Gothic, and ought not to be placed on the same level with it.

I have selected the above passage in Mr. Meidinger's introduction to his Teuto-Gothic Dictionary, as it occurs in a book of reference, compiled with great industry, and considerable ability, which may be supposed to express the opinions on the origin of the Romance languages generally current even among persons who have a more than superficial acquaintance with the subject: and I have examined it in order to justify myself for contributing my mite to the destruction of accredited and received errors, although they might seem to have been

already overthrown by former writers, such as Schlegel and Diez, and in part by M. Raynouard himself.

[This theory is still maintained by Burguy, Gramm. de la Langue d'Oil, vol. i. p. 7—10. He lays it down that 'les langues romanes sont un développement organique du viel idiôme latin vulgaire.' 1862. Diez likewise attributes this origin to the Romance languages, Rom. Gr. vol. i. p. 6.]

Note (C.)

'Ausonian in Priscus Excerpt. Legat. p. 59, B, seems to mean volgare as opposed to the Latin,' says Niebuhr, Hist. of Rome, vol. i. note 46. The passage of Priscus is as follows: Διατρίβοντι δέ μοι καὶ περιπάτους ποιουμένω προ τοῦ περιβόλου τῶν οἰκημάτων, προσελθών τις, ὃν βάρβαρον ἐκ της Σκυθικής ωήθην είναι στολής, Ελληνική ἀσπάζεταί με φωνή ' χαιρε' προσειπων, ωστε με θαυμάζειν, ότι γε δη έλληνίζει Σκύθης άνήρ. ξύγκλυδες γὰρ ὄντες πρὸς τῆ σφετέρα βαρβάρω γλώσση ζηλοῦσιν ή την Οὔννων ή την Γότθων, ή καὶ την Αὐσονίων, ὅσοις αὐτῶν πρὸς 'Ρωμαίους ἐπιμιξία' καὶ οὐ ῥαδίως τις σφῶν ἐλληνίζει τῆ φωνῆ, πλην ὧν ἀπήγαγον αἰχμαλώτων ἀπὸ τῆς Θρακίας καὶ Ἰλλυρίδος παραλίου. p. 190, ed. Bonn. It does not appear to me that this passage affords any reason for supposing that there was in the time of Priscus, any language spoken by the Romans different from the classical Latin. Priscus had accompanied Maximus on an embassy to Attila, (448 A.D.) and being in the interior of Scythia he was surprised by hearing a person address him in Greek: 'for, says he, besides their own language the Scythians in general speak either that of the Huns, or of the Goths, or sometimes that of the Ausonians, in

cases where they have had intercourse with the Romans; but it rarely happens that any of them speak Greek, except those who have been brought captive from the Thracian and Illyrian coast.' It appears to me quite evident that Priscus here used Ausonians for Romans, in order to avoid the repetition of the word Populos, and that the two terms are precisely synonymous: his meaning being that the Scythians, from their intercourse with the Romans, occasionally learnt to use the Latin language. Even if there had been a difference of dialects in the spoken language of Italy, it is very unlikely that Priscus, who was a Greek by education and habits, should have noticed such a distinction.

Note (D.)

On the non-Latin part of the Romance Languages.

It has been stated in the text that the object of the above essay is to elucidate the form and structure of the Romance languages, without reference to the origin of the words themselves, and therefore no mention was made of those foreign terms which were introduced into these languages at, or soon after, the Teutonic conquest of Western Europe. This is properly a question of etymological research: nor could it be satisfactorily determined without making a dictionary of all the Romance languages with their several dialects, in which the corresponding words should be arranged together, and their etymology explained.

It has, however, occurred to me that a few facts illus-

trative of the foreign or non-Latin part of the Romance languages might be conveniently given in this place; and with that view I shall first subjoin some of the chief derivatives of German words in the Italian, Spanish, and French languages, merely as instances of the manner in which foreign terms were adopted in those tongues, and not as making any claims to completeness. Most of them are selected from Menage's Origini Italiane, and the Glossary attached to Muratori's thirty-third Dissertation on the Italian Antiquities of the Middle Ages: from the list of French and Italian words derived from the ancient northern languages in Hickes' Thesaurus Ling. Vet. Septent. vol. i. p. 91-100, and from the index of French words at the end of Wachter's Glossarium Germanicum. Other remarks on the same subject will also be found in the treatise of G. J. Vossius. De Vitiis Sermonis et Glossematis Latino-barbaris, printed in his works, vol. ii. Amsterdam, 1695, folio. The following list has been compared with the vocabularies of Diez and Burguy. The number of words might be much augmented. 1862.]

Words in Italian, Spanish, and French derived from the Teutonic:

Agraffe Fr. from krappen, to hook, to grapple.

Alabarda It. halabarda Sp. hallebarde Fr. from helmbarte.

Albergo It. albergue Sp. auberge Fr. from herberge.

Alesna Sp. alesne or alêne Fr. lesina It. from alansa. (Grimm, D. Gr. vol. ii. p. 346.) Lesina in Italian is for alesina, like pecchia for apecchia, above p. 137. [See Burguy in alesne.]

Aldea Sp. is probably Gothic, according to Grimm, Deutsche Rechtsalterthümer, p. 309. [Diez approves of an Arabic origin.]

Alto It. and Sp. halte Fr. from halten.

Ambasciatore It. embaxador Sp. ambassadeur Fr. from ambacht, ministerium or minister.

Amuser Fr. from musse. [Compare Diez in muso.]

Anca It. and Sp. hanche Fr. from anke.

Andare It. andar Sp. andar and anar Prov. (Raynouard, Gr. Comp. p. 300,) aner and aller Fr. from anden or wanden, the same as the English to wend, of which the preterite is still in use. (Wachter in anden and wallen, p. 1814.) The initial w has been preserved in the Italian galleria and the Fr. galerie. [Compare Diez in andare.]

Araldo It. heraldo Sp. héraud Fr. from herold.

Aringa It. arenga Sp. hareng Fr. from häring.

Aringo It. arenga Sp. harangue Fr. from ringen. [Diez derives it from ring, a circle.]

Arnese It. arneses Sp. harnois Fr. from harnisch: see Grimm quoted above, p. 141.

Aspo It. from hasp-el.

Astio It. hastio Sp. hair Fr. from hass, hassen. See Muratori in astio: Orell, Altfranzösische Grammatik, p. 154.

Attaccare It. attacher Fr. from tekan Goth. [See Diez in tacco.]

Avviso, avvisare It. aviso Sp. avis, aviser Fr. from weisen. [Diez, in viso, derives these words from visum.]

Azza It. haz Sp. hâche Fr. from hacke.

Bacino It. and Sp. bac, bachot, bassin (i.e. bacin) Fr. from becken. See Adelung in v.

Baldo It. baud Fr. from bald. See Menage, Dict. Fr. in baud. [Diez in baldo, Raynouard, Lex. Rom. vol. i. p. 32.]

Balla It. bala Sp. balle Fr. are probably from the German ball, though nearly the same word is in Latin, (bulla, see Philological Museum, vol. i. p. 411.) [See Diez in balla.]

Ballare It. baylar Sp., to dance, are probably from ballen, in the sense of turning, like walzen.

Baluardo It. baluarte Sp. boulevard Fr. from bollwerk. [See Diez in boulevard.]

Bambino It. The Greek had $\beta \dot{a}\beta_{lov}$; but bambo (whence bamb-ino, above p. 132,) was probably derived from a Teutonic form bab, (bube High German, babe English,) and the m was inserted before b, as in amb Prov. from ab, and other words mentioned above, p. 198. [Diez in bambo, derives the word from the Greek $\beta a\mu\beta a\lambda \delta s$, a stammerer, whence bambalio in Cicero.]

Banco It. and Sp. banc Fr. from bank.

Banda It. and Sp. bande Fr. from band. Also benda and bendare It. from binde and binden.

Bandire It. bannir Fr. from bannen.

Bando It. and Sp. ban Fr. from bann.

Bara It. bière Fr. from bären.

Barone It. baron Sp. and Fr. from baro or varo. [See Diez in barone, Burguy in baron.]

Barca It. barco Sp. barque Fr. from barke.

Basso It. baxo Sp. bas Fr. whence bastardo It. and Sp. bâtard Fr. (above, p. 142,) from bas, below. See Wachter, p. 126. [Diez in basso, Burguy in bas.]

Batello It. (batto in Giov. Villani) bateau Fr. from bat, or bot. Above, p. 139.

Beau-frère, beaupère, etc. Fr. The first word is probably a mistranslation. See Wachter in Schönbruder.

Berger Fr. from bergen. See Muratori in parco.

Biada It. bled Fr. from blatt. [Diez in biado, Burguy in bled.]

Bianco It. blanco Sp. blanc Fr. from blank.

Bicchiere It. picher Fr. from becher: compare Bicos.

Biglietto It. billete Sp. billet Fr. from bille. See above, p. 143.

Biondo It. blondo Sp. blond Fr. from blonde.

Birra It. bière Fr. from bier. [Diez in birra.]

Bloquer Fr. from lukun Goth. belocan A. Sax. to shut. Wachter in lucken.

Bordello It. burdel Sp. bordel Fr. from bord. See above, p. 138. [Diez in borda, Burguy in borde.]

Borgo It. burgo Sp. bourg Fr. from burg.

Bosco It. bosque Sp. bois Fr. from busch. [Diez in bosco.]

Botte It. from botte, butt. [Diez in v.]

Bouc Fr. from bock. [Burguy in boch.]

Bout Fr. from but: abutan, or butan, Ang. Sax.

Brando It. brand Fr. from brand.

Bravo It. and Sp. brave Fr. from brav. [See Diez in bravo.]

Breccia It. brecha Sp. brèche Fr. from brechen.

Brida It. bride Fr. from brid, whence brit-til old H. German, blid-le English. The Ital. changed d into l (see above, p. 76, note 1,) and made briglia.

Bruno It. and Sp. brun Fr. from braun. [Burguy in brun.]

Busto It. and Sp. buste Fr. from brust, according to Hickes. [The derivation from brust is rejected by Diez in busto.]

Butiro, butero It. beurre Fr. from butter. The Sp. has not this word.

Buttare It. botar Sp. bouter, pousser Fr. from bossen, to push. Wachter in bossen. [See Diez in bottare.]

Canif Fr. from kneif, knife Eng. [Burguy in onivet.]

Canto It. and Sp. from kant. Perhaps coin Fr. may have the same origin. [Diez in canto.]

Cacciare It. cazar Sp. chasser Fr. from hetzen, to hunt, (i.e. chetzen, according to the Frankish pronunciation.)
Wachter. [See Diez in cacciare.]

Cappa It. capa Sp. chape Fr. with their numerous derivatives, from kappe. [See Diez in cappa.]

Carro It. and Sp. char Fr. from karr. See Wachter in v. Above, p. 62, note 2.

Chiasso It. from gasse.

Choisir Fr. from chiusan or kiusan, old H. German, (now kiesen.) See Schlegel, Observ. p. 110. [Diez in choisir.]

Cloche Fr. from glocke. [Burguy in v.]

Coc Fr. from coc. See Wachter in küchlein. [Burguy in coc.]

Daga It. and Sp. from degen. [Diez in v.]

Danzare It. danzar Sp. danser Fr. from tanzen.

Dardo It. and Sp. dard Fr. from dard.

Dogue Fr. from docke Germ. dog Eng.

Douve Fr. from daube, whence adouver or adouber and radouber, (Wachter,) addobbare It. [See Diez in doga, who derives the word from $\delta o \chi \acute{\eta}$, Burguy in dove.]

Drudo It. drut Pr. dru Fr. from draut or drut: see v. Hagen, Glossary to the Nibel. Lied in trut, Wachter in draut. [Diez in drudo, Burguy in drut.]

Elmo It. helmo Sp. héaume Fr. from helm.

Elsa It. from halten.

Fallare It. fallar Sp. faillir Fr. from fehlen. Fello, fellone It. follon Sp. felon Fr. also come from the same root.

Falda It. and Sp. from falte, fold Eng. [Faldistorio It. and Sp. fauteuil Fr. from faltstuhl.]

Feltro It. fieltro Sp. feutre Fr. from filz, felt.

Fiasco It. frasco Sp. flasque, flacon Fr. from flask. [See Diez in fiasco.]

Fino It. and Sp. fin Fr. from fein.

Fodero It. forro Sp. fourrier Fr. from führen.

Folla It. foule Fr. from fülle.

Folle It. fol Fr. from faul, fool Eng. [Diez in folle.]

Foresta It. floresta Sp. forêt (forest) Fr. from forst. [See Diez in foresta, Burguy in forest.]

Franco It. and Sp. franc Fr. from frank.

Fresco It. and Sp. frais Fr. from frisch. Above, p. 131.

Freccia It. flecha Sp. fléche Fr. from flitsch or flitz. [See Diez in freccia.]

Frisson and affreux Fr. from freis-lich.

Gamuza Sp. camozza It. chamois Fr. from gemse.

Garzone It. garçon Fr. See above, p. 133, note ². [Diez in garzone, Burguy in gars.]

Gaspiller i.e. ge-spillen, to spill. See Wachter in verspillen. Spillan Ang. Sax.

Gerbe Fr. from garbe.

Ghirlanda It. guirnalda Sp. guirlande Fr. probably from gairdan Goth. (gürten H. Germ. gird Eng.) On the change of d into a liquid, see above, p. 76, note ¹. So 'Οδυσσεὺs and Ulysses. [Diez in ghirlanda.]

Giallo It. jaulne Fr. from gelb.

Giardino It. jardin Sp. and Fr. from garten. See above, p. 132.

Girfalco It. girifalte Sp. gerfaut Fr. from geier. [The word falco is Latin. The first syllable of girfalco is derived by Diez in v. from gyrare.]

Glaive Fr. from glef, hasta. Wachter. [See Diez and Burguy in v.]

Gramo It. gram old Fr. from gram.

Gridare It. gritar Sp. crier Fr. from gridan Goth.

Grifo It. griffe Fr. from greifen. [Diez in griffe.]

Grosso It. grueso Sp. gros Fr. from gross.

Guadagnare It. ganar Sp. gagner Fr. from winnen. [Diez in guadagnare, Burguy in gaagnier.]

Guajo It. from weh.

Guancia It. from wange.

Guanto It. guante Sp. gant Fr. from wante. [Diez in guanto.]

Guardare It. guardar Sp. garder Fr. from wahren.

Guarentire It. garantir Fr. from weren. See Grimm, Deutsche Rechtsalterthümer, p. 603. Guarire It. and guérir Fr. appear to have the same origin.

Guarnire, guarnigione It. guarnacer, guarnicion Sp. garnir, garnison Fr. from warnen, munire: 'postea sensus ab apparatu militari ad quemcumque apparatum translatus est.' Wachter. [See Diez in guarnire.]

Guatare It. guet, gueter Fr. from wachen, wacht.

Guerra It. and Sp. guerre Fr. from werra. Grimm, D.R. p. 603. Schlegel, Observ. sur la Langue Prov., p. 97. [Diez in guerra, Burguy in guerre.]

Guiderdone It. guerdon Fr. from widerthun.

Guisa It. and Sp. guise Fr. from weise.

From the foregoing examples it will be perceived that

the Romance form of the Teutonio w is gu, and semetimes g in French.

Hurpe Fr. arpa It. and Sp. from harpfe, harp. [See Diez in arpa, Burguy in harpe.]

Havre Fr. from hafen, formed (as Hickes remarks) like Londres from London. See above, p. 81, note 1.

Indarno It. Grimm, D. Gramm. vol. iii. p. 107, note, and p. 163, explains this word from the Sclavonic daron, darno, darno, gratis from dar.

Landa It. landes Fr. from land.

Lanzichenecco It. lansquenet Fr. from lanzknecht.

Lasciare It. dexar Sp. (above, p. 76, note 1,) laisser Fr. from lassen.

Leccare It. lecher Fr. from lecken. [Diez in leccare.]

Lindo It. and Sp. from ge-linde, lindern. [Diez in lindo derives the word from limpidus.]

Lotto It. lot Fr. from loos: hlauts Goth.

Marca It. and Sp. marche Fr. from marke.

Masto It. mastil Sp. mât Fr. from mast.

Matar Sp. ammazzare It. massacrer Fr. from metzen, whence mâçon Fr. Wachter. [Diez in v. derives mazza It. from the Latin matea, of which a lengthened form mateola is used by Cato.

Matto It. from matt, mad Eng.

Meurtre Fr. from maurthr Goth. See Schlegel, Observ. p. 99. [Diez in meurtre.]

Mignon, mignard Fr. either from minne love, or min small. [Diez in mignon.]

Milza It. melsa Sp. from miltz. [Diez in milza.]

Mischiare It. mezclar Sp. mesler (mêler) Fr. from mischen. [Diez in mischiare derives the word from miscere.]

Mouton Fr. Wachter derives this word from mutzen, truncare: but montone It. creates a difficulty, which signifies a ram. See Muratori in v. [Diez in montone and Burguy in molton trace the word to the Latin mutilus. Compare Ducange in multo. Blanc, Voc. Dant. in montone derives it from montare.]

Mutiner Fr. ammunitarsi It. from motjan Goth. to meet. See Muratori in ammutinarsi. [Diez in meute and Burguy in movoir derive meute from movere, and suppose mutin to be formed from meute.]

Nord, sud, est, ouest Fr. from the German. The German names for the points of the compass appear to have been introduced into the Spanish from the French, which has also been the case more recently with the Italian.

Palco It. and Sp. from balck. [Diez in balco.]

Pancia It. panza Sp. panse Fr. from bansen, paunch Eng. [Diez in pancia derives these words from the Latin pantex.]

Panziera It. from panzer.

Partigiana It. partesana Sp. pertuisane Fr. has probably a Teutonic origin. See Muratori in partigiana. [Compare Diez in partigiana.]

Perla It. and Sp. perle Fr. from perle, [a word of obscure origin, see Diez in perla.]

Pezzo, pezza, It. pieza Sp. pièce Fr. from fetz (i. e. pfetz.) See Wachter in v.

Piazza It. plaza Sp. place Fr. from platz. [Diez in piazza derives the word from the Latin platea.]

Piccare It. picar Sp. piquer Fr. from picken.

Piffero It. pifaro Sp. fifre Fr. from pfeiffer.

Poltrone It. poltron Sp. and Fr. poltrire It. from

polster. See Muratori in poltrone and Wachter in polster. [Diez in poltro.]

Prigione It. prision Sp. prison Fr. from prisund Goth. [Diez in prigione derives the word from prehensio or prensio.]

Randa It. from rand.

Raspare It. raspar, Sp. râper Fr. from raspen.

Ratto It. raton, Sp. rat, raton Fr. from ratte. [Diez in ratto remarks that this animal was unknown to the Romans.]

Recare It. from reichen.

Ricco It. rico Sp. riche Fr. from reich.

Riga It. raya Sp. from reihe.

Rima It. and Sp. from reim.

Rocca It. rueca Sp. roque Fr. colus, from rocke.

Ronz-ino It. rocin Sp. rouss-in Fr. from ross. See above, p. 132.

Rostir Fr. arrostire It. (Muratori in v.) from rost. [Diez in rostire.]

Rubare It. rubar, Sp. rober, dérober, Fr. from rauben. [Compare Diez in roba.]

Sciabla, It. sabre Fr. from säbel. [Compare Diez in sciabla.]

Sala It. and Sp. salle Fr. from sal.

Scalco It. from schalck; whence mariscalco and siniscalco.

Schermo, schermire It. esgrimir Sp. escrimer Fr. from schirm, schirmen.

Scherzo It. from scherz.

Schiatta It. from schlacht (now ge-schlecht.)

Schiera It. eschiere old Fr. from schaar. [Burguy in eschele.]

Schietto It. from schlecht.

Schifo It. esquife Sp. esquif Fr. from schiff. See above, p. 107.

Schinca It. from schenk-el, shin Eng.

Schivare It. esquivar Sp. esquiver Fr. from scheuen.

Schiuma It. écume Fr. from schaum.

Schizzo It. esquisse Fr. a drawing hastily thrown down, from schiessen. See Tooke, Div. of Purley, vol. ii. p. 144. [Diez in schizzo derives the word from the Latin schedium.]

Scotto It. escote Sp. écot Fr. from schooss.

Senno It. from sinn. Bi-sogno It. and soin and be-soin Fr. are derived from the ancient Teutonic word which is written sonnis and sunnis in the Salic law. See Muratori in bisogno.

Smacco It. from schmach.

Smaltire It. from schmelzen. [The derivation from maltha seems preferable. See Diez in smalto.]

Snello It. from schnell.

Spanna It. from spann. [Diez in spanna.]

Sparviere It. épervier Fr. from sperber.

Sperone It. espuela Sp. éperon Fr. from sporn.

Spiare It. espiar Sp. épier Fr. from spähen.

Spruzzare It. from sprützen. [See Diez in sprazzare, p.438.]

Stampare It. estampar Sp. étampe Fr. from stampfen.

Steccare It. estacar Sp. from stechen.

Stelo It. from stiel.

Stivale It. from stiefel.

Stocco It. estoque Sp. from stock. [Diez in stocco.]

Stormo It. from sturm.

Strale It. from strahl.

Stucco It. estuque Sp. from stück, 'because it is made of pieces of marble.' Menage in v. [Diez in stucco.]

Stufa It. estufa Sp. étuve Fr. from stube.

Tusca It. from tasche. [Diez in v.]

Toccare It. tocar Sp. toucher Fr. from tekan Goth. to take. [Diez in toccare.]

Tomare It. tomber Fr. from dümen, daumeln Germ. tumb-le Engl. [See Diez in tombolare.]

Tonel Sp. tonneau Fr. from tonne. [Diez in tona.]

Torba It. turba Sp. tourbe Fr. from torf, turf Eng.

Tregua It. and Sp. trève Fr. (to which may be added intrigue Fr.) from treuga, equivalent to treue.

Trincare It. trinquer Fr. from trinken.

Tuer Fr. from tödten. Wachter. [Diez and Burguy derive this word from the Latin tutari.]

Tuffare It. étousser Fr. from tausen. [Diez in tuso derives the word from the Greek τύφος.]

Uosa It. heuse and houseaux Fr. from hosen. Menage in v. [Compare Diez in uosa.]

Urtare It. hearter Fr. from horten, to hurt.

Usbergo It. hauberc, haubergeon Fr. from halsberge.

Zanna It. from zahn. [Diez in zanna, p. 448, gives the preference to the Latin sanna.]

Zuppa It. sopa Sp. souppe Fr. from suppe, sop. [See Diez in sopa.]

With regard to the classes of words introduced from the Teutonic into the Romance languages, Wachsmuth remarks that they are for the most part the names of outward objects, as food and implements, or they relate to customs and institutions, especially the use of arms and the feudal system. (Athenœum, vol. i. p. 298.) Many words relating to warlike subjects will have been observed in the list of words just given: the introduction

of which, as well as of political terms, is quite consistent with the existence of a dominant military class of foreigners¹.

In many cases, however, it is not obvious why a Teutonic word should have been naturalized: as in the following instances, where the original Latin term has been retained by some of the Romance languages, and a new German term been substituted by others.

Latin.	Ital.	Span.	French.
æramen	rame	$cobre (kupfer)^2$	airain
attonitus	attonito	atonito	estonné (to stun)
cerevisium	birra (bier)	cerveza	·bière
pastor	pastore	pastor	berger ³
saburra	savorra	lastre (from last)	lest
sedes	\mathbf{sede}	sede	siège (from sitz4)
socer	suocero	suegro	beaupère 5
spuma	spuma and schiuma(fro schaum)	espuma om	escume
suber	suvero	corcho (from kork)	liége

¹ The following Latin terms occurring in the Greek of the New Testament, furnish a curious parallel of the introduction of foreign names for military and political subjects by a dominant nation: κολωνία, Acts xvi. 12; σπεκουλάτωρ, Mark vi. 27.; κεντουρίων, Mark xv. 39; πραιτώριον, Matt. xxvii. 27; κουστωδία, Matt. xxvii. 65; μίλιον, Matt. v. 41; δηνάριον, Luke vii. 41; ἀσσάριον, Matt. x. 29; κοδράντης, Matt. v. 26; κῆνσος, Matt. xvii. 25. [On the introduction of military terms from the German into the Romance languages, see Diez, Rom. Gramm. vol. i. p. 66.]

² Cuprum (for æs Cyprium) was a Latin word, Spartian, Carac. 9. See Ducange in v.

³ See above, p. 262. The French has *pasteur*, but only in a meta-phorical sense.

⁴ That siège is not derived from sedes is proved by the gender.

⁵ See above, p. 262.

It will be perceived that some of the words above enumerated as derived from the Teutonic are among the commonest and most familiar in the Romance languages, as albergo, andare, bambino, basso, biancho, bicchiere, birra, biglietto, borgo, bosco, bravo, etc. Ital.; albergue, baxo, blanco, billete, burgo, bosque, bravo, etc. Span.; auberge, airain, balle, bas, berger, blanc, bière, billet, bourg, bois, brave, Fr. In this respect there is a remarkable difference between the foreign words introduced by conquest into the English and into the Romance languages. In English the more familiar, idiomatic, and simple the style, the more exclusively Saxon it is, and the fewer are the foreign or French terms: whereas in the Romance languages the converse is generally the case. In Italian, for example, the more elevated the style, the more purely Latin is its character: in Tasso many successive stanzas often occur in which every word is of Latin origin; but if we take a composition in the familiar spoken language, as a comedy or a satire, it will be found scarcely possible to find a long passage entirely free from Teutonic de-Dante is a much more idiomatic writer than Tasso, and uses a much less stilted style: but his language abounds far more in words not of Latin origin.

Some words have passed into the Romance languages, either mediately or immediately, from the Greek: as spada It. espada Sp. espée Fr. from σπάθη; parola It. palabra Sp. parole Fr. from παραβολή, (Schlegel, Observ., p. 109.) To these Wachsmuth adds frissonner Fr. from φρίσσω, lisse Fr. from λίσσος, golfo It. from κόλπος, gaio It. from γαίω, (Athenäum, vol. i. p. 299.) With regard to frisson, the Teutonic derivation mentioned above, p. 264, is more probable than a Greek one; κόλπος may have

been easily introduced by the intercourse with the Greek mariners of the Mediterranean: as to the other two words it seems unlikely, notwithstanding the agreement of sound and meaning, that the etymology suggested should be true.

Diez derives liscio It. and Sp. and lisse Fr. from the German leise (in liscio); he derives gajo It. gai Fr. from the German jähe (in gajo). In his Romance Grammar, vol. i. p. 57-60, he gives a list of Greek words which have passed into Romance languages: compare p. 92. Many of these however made the transition through the medium of the Latin. Thus zio It. tio Sp. came ultimately from $\theta \in \hat{los}$; but the word thius signified uncle in-Low Latin: see Ducange in v. Agonia It. and Sp. agonie Fr. were derived from ἀγωνία, and agognare It. from ἀγωνιῶν; accidia It. was derived from ἀκηδία; borsa It. bolsa Sp. bourse Fr. from βύρσα; ermo It. from ξρημος; emicrania It. migrano Sp. migraine Fr. from ἡμικρανία; salma It. and Sp. somme Fr. from σάγμα; but agonia, accidia, byrsa, eremus, hemicrania, and sagma were also used as Latin words: see Ducange Gloss. in agonia, acedia, bursa, eremus, hemigranea, sagma. In baleno It. from βέλεμνον; colla It. cola Sp. colle Fr. from κόλλα; fanale It. from φανός (Diez in falò); mustaccio It. from μύσταξ; paggio It. page Fr. from παιδίον, pitocco It. from πτωχὸς, and stuolo It. from στόλος, the passage from one language to the other may have been direct. Several words connected with navigation and trade passed directly from the Greek into Romance languages, a circumstance naturally growing out of the maritime communication between the shores of the Mediterranean: see Diez, Etym. Wört. in barca. Fanale and golfo are words of this class: nocchiere It. and nocher old Fr. (Burguy in neif) is derived from ναύκληρος, Latinized by Plautus as nauclerus. Calare It. as 'calare le vele,' calar Sp. caler Fr. derived from χαλᾶν, is a nautical phrase. Calare is used by Vitruvius. Also cala It. and Span. cale Fr. a landing place. Some names of weights, as salma from σάγμα, mine or émine Fr. hemina Low Lat. from ἡμίνα (Burguy in mine, Ducange Gloss. Lat. in hemina, Gloss. Gr. in ἡμίνα) belong to the same class. Carato, a carat, is derived by Blanc, Vocabolario Dantesco in v. from κεράτιον, the fruit of the carob-tree. In like manner, the Greek word μνα was of Babylonian or Phænician origin, Boeckh, Metrologie, p. 34.

The word racaille Fr. which has been traced to ράκος, and tapino It. which has been derived from ταπεωνὸς, have probably other origins, (see Diez in raca, p. 711, in tapir, p. 731, also Burguy in tapir.) Bramare It. bramer Fr. which Diez in his grammar derives from βρέμεω, and entamer It., which he there derives from ἐντέμνεω, are in his Etymological Dictionary correctly explained by other etymologies.

Numerous words passed from Latin, the language of the conquerors, into Greek, the language of the conquered, in later times. See the Glossaries of Low Greek by Ducange and Meursius, and the curious treatise of Wannowski, Antiquitates Romanæ a Græcis Fontibus explicatæ, Regim. Pruss. 1846.

An etymological vocabulary of French words, whose origins are explained in the two glossaries of Ducange, is appended to his *Glossarium Mediæ et Infimæ Græcitatis*, vol. ii. p. 251—316.

A list of French words derived from the Greek is given by Voltaire, Dictionnaire Philosophique, art. Gree.]

On the introduction of Arabic words into the languages of the Spanish peninsula, my entire ignorance of Arabic prevents me from offering any remarks of my own: I am, however, enabled, through the kindness of Dr. Rosen, to annex the following notes, communicated to me by that able oriental scholar.

ARABIC WORDS IN SPANISH AND PORTUGUESE.

The Arabic words in the Spanish and Portuguese languages have already engaged the attention of several scholars, chiefly natives of the peninsula. The works of some of them I have had an opportunity of consulting in the library of the British Museum; and the extracts which I have made from them, and which are now before me, form the basis of the following remarks.

In the Origines dela Lengua Española, compuestos por varios autores, etc. edited by Don Gregorio Mayáns i Siscár, (Madrid, 1737, 2 vols. 12mo.) some observations are made on the Arabic words in the Spanish language, (vol. i. p. 235—264,) but apparently with too little knowledge of Arabic to be of much utility.

Of more value are the etymological remarks occasionally given in the *Diccionario Español Latino Arabigo*, by Francisco Cañes, (Madrid, 1787, 3 vols. folio.) This work is intended for a purely practical purpose as a Spanish and *modern* Arabic dictionary; and the author seems to be familiar only with the Arabic *now spoken* in Mauritania, etc.; otherwise he might have given a far greater number of Arabic synonymes, and would probably have assigned more satisfactory derivations for many Spanish words from the ancient and literary Arabic.

In the Tesoro dela Lengua Castellana Española, by D. Sebastian de Cobarruuias, (Madrid, 1611, fol.) etymologies from the Arabic are frequently reported on the authority of others, but the author seems in many instances to admit them with reluctance, as he endeavours to account differently for the origin of the words thus explained.

In Portuguese there exists a separate treatise on the subject of our enquiry, Joao de Sousa, Vestigios de la Lingua Arabica em Portugal, (Lisbon, 1789, 4to.) In his preface the author makes an assertion which I subjoin in his own words, as it is much at variance with what you seem to anticipate as to the quantum of Arabic in European languages 1: 'e tambem ficámos conservando tantas paluvras Arabicas, que dellas bem se póde compor hum arrazoado lexicon, como já notou José Scaligero Escript. 228 ad Isaac Fontan. 'Tot puræ Arabicæ voces in Hispan. reperiuntur ut ex illis justum lexicon confici possit."-Sousa makes mention of several writers that preceded him in his enquiry: Duarte Nunes de Leao, who in 1606 published a work, Origem da Lingua Portugueza, (reprinted in 1781,) containing a list of two hundred and seven Arabic words in the Portuguese language: Manoel de Faria e Sousa, author of the Europa Portugueza; and Dom Raphael Bluteau, who in 1712 edited a Diccionario da Lingua Portugueza.

I hardly know whether the remark just extracted from Sousa's preface is justified by the body of his work,

¹ The author had ventured to express to Dr. Rosen an opinion that the number of Arabic words in Spanish and Portuguese is not conderable.

which consists of an alphabetic list of Portuguese words explained from the Arabic, and filling one hundred and sixty pages of small quarto. Many of his etymologies are stated at great and unnecessary length. Some of the words explained do not, I apprehend, owe their existence in the Portuguese language to the Arabian dominion, but to the subsequent intercourse of the Portuguese with the East. With regard to other expressions, it would seem that they have become obsolete, and can no longer be considered as forming part of the living and popular language of the Portuguese nation, as Sousa finds it necessary to adduce passages from Portuguese authors in which they occur.

Besides Sousa's work I know only of one other treatise exclusively devoted to the subject of our present enquiry: it is written in English, and bears the title Remains of Arabic in the Spanish and Portuguese Languages, by S. Weston, (London, 1810, 8vo.) It contains two copious lists of Spanish and Portuguese words derived from the Arabic and other oriental languages, but it should be used with great caution, as the Arabic words are not always correctly reported, and many of the etymologies given are evidently farfetched and fanciful: the word Alhambra, for instance, the name of the celebrated castle of Granada, is by Mr. Weston derived from hem bera, which words he says signify 'sans souci,' whereas, according to the etymology commonly received, it is the regular feminine form of the Arabic adjective ahmar, 'red,' with the article prefixed, al-hamrâ, i.e. 'the red (castle),' in allusion to the colour of the materials of which it was built. Again, the Spanish word Algueria, also written Alcarria, 'a farm,' is by Mr. Weston traced back to the Persian khargâh, 'a pavilion or tent, a moveable Turcoman hut:' but it seems much simpler to consider it as identical with the Arabic karyah or karyat, 'a village,' with the article al prefixed to it.

Sousa premises a few general remarks on the change which certain letters have undergone in the passing over of Arabic words into the Portuguese. One of them, of which the glossary affords the most ample confirmation, is on the transition of the Arabic H into F in Portuguese. The following are examples collected from the glossary.

Alfeloa (mélasse en caramel) from halvah, sweetness, any thing sweet.

Azufeme from the Arabic zahmah: 'Aperto de gente em lugar pequeno o estreito; tambem se toma por pressa, fervor, cuidado, diligencia, etc. Deriva-se do verbo zahama, apertar, coarctar, restringir.'

Almofalla, an encampment, from the Arabic mahallah, a halting place or encampment of a caravan.

Refens, from the Arabic rahen, a pledge.

Amofinar, from the Arabic verb mahana, to afflict, to vex.

There are also a few instances in which the Arabic kh (or ch as pronounced by the Germans and the Scotch) is thus changed into f in Portuguese: e.g.

Alfange, from the Arabic khanjar, a poniard.

Alface, from the Arabic khass, pot-herbs.

The same transition from H and Kh into F may also be observed in Spanish: e.g.

Alfageme (according to Cobarruuias; a barber) from hajim, a surgeon, a barber.

Alforja, the measles, from homrah, redness, erysipelas. Alforja, from khurj, a portmanteau. Alfayata, from khayyât, a tailor.

It is remarkable that Latin words have in Spanish undergone the opposite change, substituting H for F, as in hijo, filius: hacer, facere, etc. I am not aware of any instance of a similar transition of an Arabic F into a Spanish or Portuguese H.

I subjoin a few more words from Sousa's list, but slightly changing the spelling of the Arabic words, so as to suit it to the English pronunciation of the consonants: the vowels being always taken in their German or Italian value.

Açougue, (in Spanish azoque,) Arabic sûk, (with the article, as-sûk,) a market, a market-place.

Adail, Arabic dalil, (with the article, ad-dalil,) a guide. Adarme, Arab. dirhem, (ad-dirhem,) a particular coin.

Adibo, Arab. dib or zîb, (ad-dib, az-zîb,) a wolf.

Albafor, Arab. bakhûr, (al-backhûr,) incense.

Almofariz, Arab. mihrâs, (al-mihrâs,) a grinding-stone.

Azeite, Arab. zait, (az-zait,) an olive.

The great proportion of words that begin with A in Sousa's and Weston's lists is striking. The Arabic article, as usually pronounced, begins with that vowel, and it would appear that words restricted in their meaning to one special and definite object by the prefixed article, and thus losing, as it were, according to the conception of hearers unacquainted with Arabic grammar, their general or appellative nature, and becoming a

sort of proper name of the things designated by them, found a way most easily into the vocabulary of a foreign language.—The L of the Arabic article is always assimilated to the initial consonant of the word to which it is prefixed, if that consonant is either a sibilant or a dental letter, or R, or N. Sousa draws attention to this euphonic rule, as it explains a number of words in his glossary.

The remark as to the preponderance of words beginning with A and Al applies equally to the Arabic terms found in Spanish. I submit a few Spanish words with their explanations from the Arabic.

Algebra, algebrista, from the Arab. verb jabara, to restore any thing broken.

Acemita, from the Arab. samîd, (as-samîd,) white bread. Açofar, (according to Cobarruuias, æs fusile,) from the Arabic sofr, (as-sofr,) copper.

Albarda, Arab. barda'ah, (al-barda'ah,) a saddle.

Albeytur, Arab. baitâr, (al-baitâr,) a farrier, a horse-leech.

Alboque, Arab. $b\hat{u}k$, $(al-b\hat{u}k)$, a trumpet, a clarion, a pipe.

Alcala, Arab. kal'ah, (al-kal'ah,) a castle, a fort.

Alcantara, Arab. kantarah, (al-kantarah,) a bridge.

Albufera and albuhera, probably the Arabic bohairah, (al-bohairah,) a small lake.

Almaizar, Arab. mîzar, (al-mîzar,) a girdle.

Alberca, Arab. birkah, (al-birkah,) a tank, a pond, a reservoir.

Alcohol, Arab. kohl, (al-kohl,) antimony used as a collyrium to paint the eyelids; hence alcoholado, said of

animals that have around the eyelids a darker colour than over the remaining part of their body.

Alhamel, Arab. (hâmil, al-hâmil,) a carrier.

Alcayde, Arab. kâdi, (al-kâdi,) a judge, a magistrate.

Alcrebite, Arab. kibrît, (al-kibît,) sulphur.

Arraez, Arab. raïs (ar-raïs,) a master or lord.

Atalaya, (an observatory, a barbican,) Arab. ittilâ, (from the verb tala'a,) the ascending to a high place for the purpose of taking a survey.

Bellota, Arab. ballût, oak, acorn.

Cafila, Arab. kāfilah, a caravan.

Cid, Arab. sayyed, (commonly pronounced sid,) master, lord.

Fulano, Arab. fulân, such an one, un tel.

Guada, Arab. wâdi, a river: in many proper names, e.g. Guadalquivir, i.e. Wâdi-al-kabîr, 'the Great River.'

Horro, Arab. hurr, free.

Jarro, Arab. jarrah, a water-pot.

Naranja, Arab. nâranj, an orange.

Taça, tasi, Arab. tâs, a cup.

Tahona, Arab. tahhânat, a mill turned by either camels or asses.

Matraca, (a rattle,) Arab. mitrakat, a smith's hammer, a wooden rod for beating cotton or wool.

Mascara, (a cover to disguise the face,) Arab. mask-harat, a buffoon, a jester; sport, pleasantry.

Xeque, Arab. sheikh, an old man, a chief.

Xarate, Arab. sharâb, any beverage.

Rambla, Arab. raml, sand, a tract of sandy country.

F. Rosen.

[For examples of Romance words derived from the

Arabic or from some other oriental tongue, compare Diez, Etymological Dictionary, in alcohol, alcova, almirante, arsenale, assassino, baracane, baracca, barbacane, caracca, catrame, carmesino, feluca, fondaco, gesmino, magazzino, mugavero, ricamare, ataballo, tamburo, zecca, (p. 448.)

On Arabic words in Spanish, see Diez, Rom. Gramm. vol. i. p. 97.

For some Arabic words in the Sicilian dialect, see Abela, Malta Illustrata, vol. i. p. 682, Ed. 1772.

For an etymological vocabulary of French words derived from oriental languages, see Pihan, Glossaire des Mots Français tirés de l'Arabe, du Persan, et du Turc, 1 vol. 8vo. Paris, 1847.]

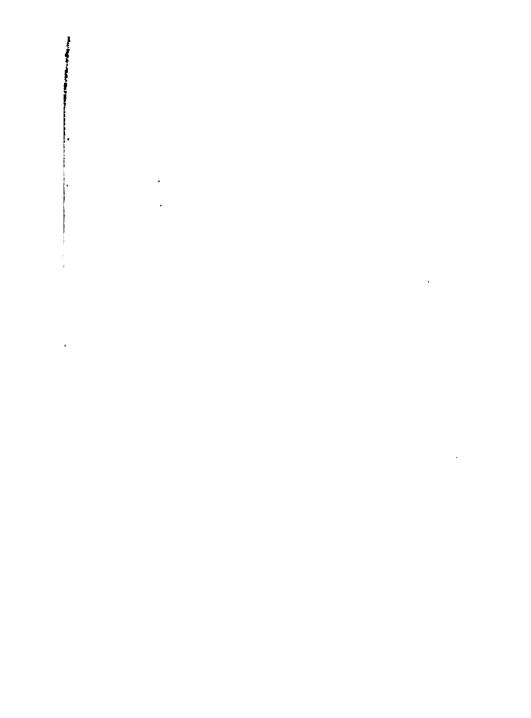

Note (E.)

The following extract from the Evidence of Dr. Chalmers, before the Committee of the House of Commons on the State of the Poor in Ireland, also throws light on the gradual extinction of the Gaelic language in Scotland.

'Does the use of Gaelic at the present day operate to impart instruction better among the Highlanders?—It has given them an additional taste and demand for knowledge in general; so that in virtue of that change they are more acquainted with English books and English literature than they were.

'Are you not of opinion that the operations of the Gaelic Society have turned rapidly, though indirectly, to the extinction of the Gaelic language?—I am not aware that they have had that effect.

- 'Have not they operated considerably to give an increased knowledge of the English language?—They have, certainly.
- 'Do you consider it probable that the English and Gaelic language will continue to go on pari passu for any considerable time in the country?—The retrogression on the part of the Gaelic language is very slow: the line of demarcation between the Gaelic and the English being still, I believe, very much what is was fifty years ago. We can ascertain that from a circumstance that is noticeable enough; in the Gaelic parishes, the minister is bound to preach in Gaelic once every Sunday. There has certainly been a slow progress in a northern direction towards preaching exclusively in English, but the progress is exceedingly slow. In a large period of time, however, the tendency is to the subsiding, and at length to the ultimate disappearance of the Gaelic language.
- 'Do you not think that the course which has been taken in the management of Highland property has tended materially to diminish the number of those that speak the Gaelic language?—I should think so.
- 'Has it ever occurred to you that the extension of paper currency has had the effect of extending the knowledge of the English language?—I am not aware of it.'—Qu. 3361, 3665—9.

INDEX.

Accusative used for the nominative case in the Latin of the middle ages, 59; tendency to substitute it for the nominative, 88, 152 note '. Adjectives, Provençal, their declension, 79, 80. Adverbs, Romance, in mente, 209, 210. - derived from the Latin, 212: from medium, 216 from aliorsum, 212 – minus, pejus, plus, 217 ---- aliquoties, ib. ---- foras, ib. quando, ib. - hodie, heri, ib. quare, ib. -'jam, 213 retro, ib. —— *ibi*, ib. — *satis*, ib. ---- inde, 214 semper, 218 - insimul, ib. - subinde, ib. ---- intus, deintus, 215 tunc, ib. - ubi, 219 ---- jusum, susum, ib. unde, ib. ---- magis, ib. - unquam, nunquam, ib. - mane, 216 Adverbs, Romance, modern, not derived from Latin adverbs: amon, aval, 219 hora, 222 ades, adesse, des, 220 tost, ib. 223 entorn, environ, ib. trop, ib. lev, 221 malgrat, ib. mantenen, ib.

Aimoin, De Gestis Francorum, 175 note 3.
Alboacem, charter of, its genuineness examined, 106 note 2.

Analytic forms of grammar, 25.

Arabic words in Spanish and Portuguese, 126, 156, 275.

Articles, their origin, 54; Romance definite article, 56.

At, its changes in French, 135, note .

Auxiliary verbs, in Provençal, 167; in the other Romance languages, 169.

B, inserted between m and a consonant, 71 note 1.

C, its changes in the Romance languages, 109.

Cases, their confusion in Latin after the German invasion, 57.

Celtic languages, their extinction in Western Europe, 20, note 1, 45; were not mixed with other languages, 256.

Comparison, degrees of, in Provençal, 147; in the other Romance languages, 148.

Conditional tense in the Romance languages, 176.

Conjunctions, Romance, from Latin:

aut, 224

et, ib.

nec, 227.

Dante, his usage of proper names, 103; Provençal passage of, cited, 114, note 3; his use of sipa, 234.

Dialetto, 16 note 1.

Diez, 26.

Diminutives, 132.

Drusi, 99.

E, before s, followed by a consonant, 107.

FRENCH, its ancient form 31; its nominative and accusative, 80; its genders, 114; its degrees of comparison, 148; its pronouns, 153; its numerals, 163; its auxiliary verbs, 169; its regular verbs, 177; its prepositions, 197; its adverbs, 214; its conjunctions and particles, 224; it has departed further from the Latin than the other Romance languages, 247.

Future tense in the Romance languages, 173.

Genders, how far changed in the Romance languages, 113. German, its influence on the Latin, 21, 54, 57, 90, 97, 113, 142, 146, 166, 179, 190, 194, 220, 223, 224, 232, 235.

words in the Romance languages, 258.
